Warning

1. This Kyocera LCD module has been specifically designed for use only in electronic devices and industrial machines in the area of audio control, office automation, industrial control, home appliances, etc. The module should not be used in applications where the highest level of safety and reliability are required and module failure or malfunction of such module results in physical harm or loss of life, as well as enormous damage or loss. Such fields of applications include, without limitation, medical, aerospace, communications infrastructure, atomic energy control. Kyocera expressly disclaims any and all liability resulting in any way to the use of the module in such applications.

2. Customer agrees to indemnify, defend and hold Kyocera harmless from and against any and all actions, claims, damages, liabilities, awards, costs, and expenses, including legal expenses, resulting from or arising out of Customer's use, or sale for use, or Kyocera modules in applications.

Caution

1. Kyocera shall have the right, which Customer hereby acknowledges, to immediately scrap or destroy tooling for Kyocera modules for which no Purchase Orders have been received from the Customer in a two-year period.

1. Application

This document defines the specification of TCG062HVLBD-H20. (RoHS Compliant)

2. Construction and outline

LCD	: Transmissive color dot matrix type TFT
Backlight system	: LED
Polarizer	: Glare treatment
Additional circuit	: Timing controller, Power supply (3.3V input) (with Constant current circuit for LED backlight)
Touch panel	: Analog type(Glass/Glass), Glare Anti-reflection treatment

3. Mechanical specifications

3-1. Mechanical specifications of LCD

Item	Specification	Unit
Outline dimensions 1)	173 (W)× 70 (H) × 7.92 (D)	mm
Active area	147.84 (W) × 55.44 (H) (15.8cm / 6.2 inch (Diagonal))	mm
Effective viewing area	149.8 (W) × 57.4 (H)	mm
Dot format	640×(B,G,R) (W) × 240 (H)	dot
Dot pitch	0.077 (W) × 0.231 (H)	mm
Base color 2)	Normally White	-
Mass	145	g

1) Projection not included. Please refer to outline for details.
2) Due to the characteristics of the LCD material, the color varies with environmental temperature.

3-2. Mechanical specifications of touch panel

Item		Specification	Unit
Input		Radius-0.8 stylus or Finger	-
Actuation Force		0.1～2.0	N
Operating life	Striking(Finger-input) 1)	1 million	hits
	Sliding(Stylus–input) 2)	100 thousand	characters
Surface hardness		2H or more(Pencil hardness)	-

1) Striking test condition

Testing rod : Silicon rubber (Hardness:60°),Tip : R = 4.0
Testing location : In active area
Input voltage : DC5V
Load : 2.94N
Cycle : 5hits/sec
Judgment : No defect in function
: No appearance defect which causes trouble to use.
*Dents, blurs and marks on surface film : neglected

2) Sliding test condition

Testing rod : Polyacetal resin, Tip : R = 0.8
Testing location : In active area
Input voltage : DC5V
Load : 2.45N
Input length : 10mm
Input speed : 50mm/sec
Sliding times : 10mm sliding (back and forth) counts as 2 times.
Judgment : No defect in function
: No appearance defect which causes trouble to use.
*Dents, blurs and marks on surface film : neglected

1) Operating temperature means a temperature which operation shall be guaranteed. Since display performance is evaluated at 25°C, another temperature range should be confirmed.

2) Temp. = -30°C＜48h , Temp. = 80°C＜168h
Store LCD panels at normal temperature/humidity. Keep them free from vibration and shock. An LCD panel that is kept at a low or a high temperature for a long time can be defective due to other conditions, even if the low or high temperature satisfies the standard.
(Please refer to "Precautions for Use" for details.)

3) Non-condensing

4) Temp.≦40°C, 85%RH Max.
Temp.＞40°C, Absolute humidity shall be less than 85%RH at 40°C.

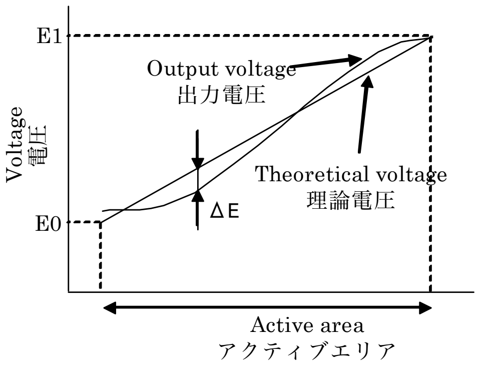
1) Resistance between terminal xL and xR, or between yU and yL

2) Apply 5VDC to the terminal xL-xR, and measure the output voltage at terminal y when a random input is applied in the active area. Measure the difference between the output and theoretical voltages. (Measure the actual voltage at the terminal using the same method.)



Linearity リニアリティ (%) = $\frac{\Delta \mathrm{Emax}}{\mathrm{E1\text{-}E0}}$

3) Resistance between the upper and lower terminals.

4) Apply 5VDC to the terminal xL-xR, and measure the oscillation at terminal y when applying a random input in the active area. (Measure the oscillation at terminal x using the same method.)

1) For each LED.
2) A forward current below 5.0mA may reduce the brightness uniformity of the LED backlight. This is because the amount of light from each LED chip is different. Therefore, please evaluate carefully before finalizing the input current.
3) When brightness decrease 50% of minimum brightness. The average life of a LED will decrease when the LCD is operating at higher temperatures.
4) Life time is estimated data. (Condition : IF=15mA, Ta=25℃ in chamber).
5) When you start-up, please charge in sequence of $V_{IN}B$->BLEN, or VBRT. When you shut-down, please stop in sequence of BLEN and/or VBRT->$V_{IN}B$.
6) Please do not connect the other than our backlight to this output connector on the PCB.
7) In case V_{DD} and $V_{IN}B$ are supplied by a single power source, V_{DD} & $V_{IN}B$, and GND are connected directly and separately from the output on the power source. If the common wire are used for V_{DD} & $V_{IN}B$, and for GND, and are split near the PCB, and connect to each LCD driving circuit and backlight driving circuit, a flicker might be occurred due to a ripple between the both circuit.

10. Design guidance for analog touch panel

10-1. Electrical (In customer's design, please remember the following considerations.)

1) Do not use the current regulated circuit.
2) Keep the current limit with top and bottom layer.
   (Please refer to "Electrical absolute maximum ratings" for details.)
3) Analog touch panel can not sense two points touching separately.
4) A contact resistance is appeared at the touch point between top and bottom layer.
   After this resistance has stable read of the touch panel position data.
5) Because noise of inverter or peripheral circuits may interfere signal of touch panel itself it is necessary to design carefully in advance to avoid these noise problem.

10-2. Software

1) Do the "User Calibration".
2) "User Calibration" may be needed with long term using.
   Include "User Calibration" menu in your software.
3) When drawing a line with a stylus, there may be a slight discontinuity when the stylus passes over a spacer-dot. If necessary, please provide a compensation feature within your software.

10-3. Mounting on display and housing bezel

1) Do not use an adhesive tape to bond it on the front of touch panel and hang it to the housing bezel.
2) This touch panel has an airtight but not watertight structure. Please not to use it for the applications requiring watertight or under the environments occurred condensation.
   If it is expected to be exposed to the environments that vapor, moisture or other liquids may seep inside a bezel, please be sure to take some measurements for drip-proof or waterproof by using sealing materials on the bezel.
3) In cases where the touch panel is bent or twisted, Newton's Rings may become visible. Please do not attach the touch panel to the LCD with a bend or twist and use similar precautions when mounting the assembled unit in the final product. Furthermore, design the final product so that the touch panel is not bent during use.

11. Lot number identification

The lot number shall be indicated on the back of the backlight case of each LCD.

12. Warranty

12-1. Incoming inspection

Please inspect the LCD within one month after your receipt.

12-2. Production warranty

Kyocera warrants its LCD's for a period of 12 months from the ship date. Kyocera shall, by mutual agreement, replace or re-work defective LCD's that are shown to be Kyocera's responsibility.

13. Precautions for use

13-1. Installation of the LCD

1) The LCD shall be installed so that there is no pressure on the LSI chips.
2) The LCD shall be installed flat, without twisting or bending.
3) Please design the housing window so that its edges are between the active area and the effective area of the LCD screen.
   Must maintain a gap between inside of bezel and touch panel to avoid malfunction or electrode damage of touch panel.
4) A transparent protection sheet is attached to the polarizer. Please remove the protection film slowly before use, paying attention to static electricity.

13-2. Static electricity

1) Since CMOS ICs are mounted directly onto the LCD glass, protection from static electricity is required.
2) Workers should use body grounding. Operator should wear ground straps.

13-3. LCD operation

1) The LCD shall be operated within the limits specified. Operation at values outside of these limits may shorten life, and/or harm display images.

13-4. Storage

1) The LCD shall be stored within the temperature and humidity limits specified.
   Store in a dark area, and protect the LCD from direct sunlight or fluorescent light.
2) Always store the LCD so that it is free from external pressure onto it.

13-5. Usage

1) DO NOT store in a high humidity environment for extended periods. Polarizer degradation bubbles, and/or peeling off of the polarizer may result.
2) Do not push or rub the touch panel's surface with hard to sharp objects such as knives, or the touch panel may be scratched.
3) When the touch panel is dirty, gently wipe the surface with a soft cloth, sometimes moistened by mild detergent or alcohol. If a hazardous chemical is dropped on the touch panel by mistake, wipe it off right away to prevent human contact.
4) Touch panel edges are sharp. Handle the touch panel with enough care to prevent cuts.
5) Always keep the LCD free from condensation during testing. Condensation may permanently spot or stain the polarizer.
6) Do not pull the LED lead wires and do not bend the root of the wires. Housing should be designed to protect LED lead wires from external stress.
7) Do not disassemble LCD because it will result in damage.
8) This Kyocera LCD has been specifically designed for use in general electronic devices, but not for use in a special environment such as usage in an active gas. Hence, when the LCD is supposed to be used in a special environment, evaluate the LCD thoroughly beforehand and do not expose the LCD to chemicals such as an active gas.
9) Please do not use solid-base image pattern for long hours because a temporary afterimage may appear. We recommend using screen saver etc. in cases where a solid-base image pattern must be used.
10) Liquid crystal may leak when the LCD is broken. Be careful not to let the fluid go into your eyes and mouth. In the case the fluid touches your body; rinse it off right away with water and soap.

1) Test in active area.
2) Dents, blurs and marks on surface film: neglected.
3) 10mm sliding (back and forth) counts as 2 times.
4) Temp. cycle test (Heat shock included): the LCD shall be tested after leaving it stabilize at room temperature for 2 hours after the last cycle.
5) An operational test was performed after the following conditions. First, the touch panel was left for a certain time under 5V voltages applied (without touch), Then it was left at room temperature (No VDC applied) for 2 hours.
6) Each test item uses a test LCD only once. The tested LCD is not used in any other tests.
7) The LCD is tested in circumstances in which there is no condensation.
8) The reliability test is not an out-going inspection.
9) The result of the reliability test is for your reference purpose only.
The reliability test is conducted only to examine the LCD's capability.

取り付け方法
(Installation of the LCD)

ケースにモジュールをはめ込み(x,y固定)、裏面からz方向を固定する事が可能。
(The LCD module shall be held in the X/Y direction by the housing, and in the Z direction using a backboard.)

斜線部の領域にて、下記の条件を満たし押さえることが望ましい。
(To hold the LCD module in place, it shall be supported with pressure applied to the hatched areas indicated by the descriptions below.)

▨ 押さえつけ可能領域
(Pressure may be applied in this area.)

▧ 押さえつけ可能領域．但し、局所的な過負荷禁止。
(No "point" over pressure is allowed.)

表面取り付け条件
(Installation conditions (Front side))

1.下辺長辺側、左短辺中央部に局所的な負荷がかからないように取り付けのこと
(1. The LCD shall be installed so that there is no point pressure applied in the middle of the left and lower border around the viewing area.)

2.広い範囲で均一に押さえることが望ましい
(2. The LCD shall be uniformly supported over as wide an area as possible.)

注記(Note)
指定外公差(Torelance without indication) :±0.5

裏面取り付け条件
(Installation conditions (Back side))

1.PCBへの接触無きこと
(1. Do not allow any foreign material to contact the PCB.)

2.FPCエリア押さえ不可
(2. Do not use any part of the FPC area to hold the LCD module in place)

3.PCB周りの板金突起部押さえ不可
(3. Do not apply pressure on the projected metal part of the PCB.)

4.モジュールがたわむこと無きよう押さえつけのこと
(4. Do not allow the LCD module to bend or twist.)

5.広い範囲で均一に押さえることが望ましい
(5. Support the LCD with uniform pressure over as wide an area as possible.)

1) Note

	Note		
General	1. Customer identified anomalies not defined within this inspection standard shall be reviewed by Kyocera, and an additional standard shall be determined by mutual consent. 2. This inspection standard about the image quality shall be applied to any defect within the active area and shall not be applicable to outside of the area. 3. Inspection conditions Luminance : 500 Lux min. Inspection distance : 300 mm. Temperature : 25 ± 5℃ Direction : Directly above		
Definition of inspection item	Dot defect	Bright dot defect	The dot is constantly “on” when power applied to the LCD, even when all “Black” data sent to the screen. Inspection tool: 5% Transparency neutral density filter. Count dot: If the dot is visible through the filter. Don’t count dot: If the dot is not visible through the filter.  R G B R G B R G B R G B R G B R G B R G B R G B R G B dot defect
		Black dot defect	The dot is constantly “off” when power applied to the LCD, even when all “White” data sent to the screen.
		Adjacent dot	Adjacent dot defect is defined as two or more bright dot defects or black dot defects.  R G B R G B R G B R G B R G B R G B R G B R G B R G B dot defect
	External inspection	Bubble, Scratch, Foreign particle (Polarizer, Cell, Backlight)	Visible operating (all pixels “Black” or “White”) and non operating.
		Appearance inspection	Does not satisfy the value at the spec.
	Others	LED wire	Damaged to the LED wire, connector, pin, functional failure or appearance failure.
