1) For each "AN-CA"

2) When brightness decrease 50% of minimum brightness.
   The average life of a LED will decrease when the LCD is operating at higher temperatures.

3) Life time is estimated data. (Condition：IF=60mA, Ta=25℃ in chamber).

4) An input current below 15mA may reduce the brightness uniformity of the LED backlight.
   This is because the amount of light from each LED chip is different. Therefore, please evaluate
   carefully before finalizing the input current.

11-1. Incoming inspection

Please inspect the LCD within one month after your receipt.

M303011

12. Precautions for use

12-1. Installation of the LCD
 1) Please ground either of the mounting (screw) holes located at each corner of an LCD,
    in order to stabilize brightness and display quality.
 2) A transparent protection plate shall be added to protect the LCD and its polarizer.
 3) The LCD shall be installed so that there is no pressure on the LSI chips.
 4) The LCD shall be installed flat, without twisting or bending.
 5) A transparent protection sheet is attached to the polarizer. Please remove the protection film
    slowly before use, paying attention to static electricity.

12-2. Static electricity
 1) Since CMOS ICs are mounted directly onto the LCD glass, protection from static electricity is
    required.
 2) Workers should use body grounding. Operator should wear ground straps.

12-3. LCD operation
 1) The LCD shall be operated within the limits specified. Operation at values outside of these limits
    may shorten life, and/or harm display images.

12-4. Storage
 1) The LCD shall be stored within the temperature and humidity limits specified.
    Store in a dark area, and protect the LCD from direct sunlight or fluorescent light.
 2) Always store the LCD so that it is free from external pressure onto it.

12-5. Usage
 1) DO NOT store in a high humidity environment for extended periods. Polarizer degradation bubbles,
    and/or peeling off of the polarizer may result.
 2) The front polarizer is easily scratched or damaged. Prevent touching it with any hard material, and
    from being pushed or rubbed.
 3) The LCD screen may be cleaned by wiping the screen surface with a soft cloth or cotton pad using a
    little Ethanol.
 4) Water may cause damage or discoloration of the polarizer. Clean condensation or moisture from
    any source immediately.
 5) Always keep the LCD free from condensation during testing. Condensation may permanently spot
    or stain the polarizer.
 6) Do not disassemble LCD because it will result in damage.
 7) This Kyocera LCD has been specifically designed for use in general electronic devices, but not
    for use in a special environment such as usage in an active gas. Hence, when the LCD is supposed
    to be used in a special environment, evaluate the LCD thoroughly beforehand and do not expose
    the LCD to chemicals such as an active gas.
 8) Please do not use solid-base image pattern for long hours because a temporary afterimage may
    appear. We recommend using screen saver etc. in cases where a solid-base image pattern must
    be used.
 9) Liquid crystal may leak when the LCD is broken. Be careful not to let the fluid go into your eyes
    and mouth. In the case the fluid touches your body; rinse it off right away with water and soap.

High temp. operation	70°C	500h	Display function Display quality Current consumption	: no defect : no defect : no defect

1) Each test item uses a test LCD only once. The tested LCD is not used in any other tests.

2) The LCD is tested in circumstances in which there is no condensation.

3) The reliability test is not an out-going inspection.

4) The result of the reliability test is for your reference purpose only.
   The reliability test is conducted only to examine the LCD's capability.

This inspection standard about the image quality shall be applied to any defect within the active area and shall not be applicable to outside of the area. 3. Inspection conditions Luminance : 500 Lux min. Inspection distance : 300 mm. Temperature : 25 ± 5℃ Direction : Directly above		
Definition of inspection item	Dot defect	Bright dot defect	The dot is constantly "on" when power applied to the LCD, even when all "Black" data sent to the screen. Inspection tool: 5% Transparency neutral density filter. Count dot: If the dot is visible through the filter. Don't count dot: If the dot is not visible through the filter.
		Black dot defect	The dot is constantly "off" when power applied to the LCD, even when all "White" data sent to the screen.
		Adjacent dot	Adjacent dot defect is defined as two or more bright dot defects or black dot defects.
	External inspection	Bubble, Scratch, Foreign particle (Polarizer, Cell, Backlight)	Visible operating (all pixels "Black" or "White") and non operating.
		Appearance inspection	Does not satisfy the value at the spec.
	Others	LED wires	Damaged to the LED wires, connector, pin, functional failure or appearance failure.
	Definition of size	Definition of circle size d = (a + b)/2	Definition of linear size
