SPEC No.	DATE	REVISED No.	PAGE	SUMMARY	NOTE
LD-21403A	April.17.2009	−	−	−	1 st Issue

1. Application
   This specification applies to color TFT-LCD module, LQ104V1DG33.

   These specification sheets are the proprietary product of SHARP CORPORATION(”SHARP) and include materials protected under copyright of SHARP. Do not reproduce or cause any third party to reproduce them in any form or by any means, electronic or mechanical, for any purpose, in whole or in part, without the express written permission of SHARP.

   The device listed in specification sheets was designed and manufactured for use in general electronic equipment.

   In case of using the device for applications such as control and safety equipment for transportation(aircraft, trains, automobiles, etc.), rescue and security equipment and various safety related equipment which require higher reliability and safety, take into consideration that appropriate measures such as fail-safe functions and redundant system design should be taken.

   Do not use the device for equipment that requires an extreme level of reliability, such as aerospace applications, telecommunication equipment(trunk lines), nuclear power control equipment and medical or other equipment for life support.

   SHARP assumes no responsibility for any damage resulting from the use of the device which does not comply with the instructions and the precautions specified in these specification sheets.

   Confirm "11. Handling Precautions "(page 14) item when you use the device.

   Contact and consult with a SHARP sales representative for any questions about this device.

2. Overview
   This module is a color active matrix LCD module incorporating amorphous silicon TFT (Thin Film Transistor). It is composed of a color TFT-LCD panel, driver ICs, control circuit and power supply circuit and a backlight unit. Graphics and texts can be displayed on a $640 \times 3 \times 480$ dots panel with 262,144 colors by supplying 18 bit data signal (6bit/color), four timing signals,+3.3V/ +5.0V DC supply voltage for TFT-LCD panel driving and supply voltage for backlight.
   The TFT-LCD panel used for this module is a low-reflection and higher-color-saturation type.
   Therefore, this module is also suitable for the multimedia use.
   Optimum viewing direction is 6 o'clock.
   Backlight-driving DC/AC inverter is not built in this module.
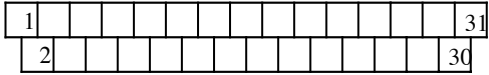

3. Mechanical Specifications

Parameter	Specifications	Unit
Display size	26 (10.4") Diagonal	cm
Active area	211.2(H)×158.4(V)	mm
Pixel format	640(H)×480(V)	pixel
	(1 pixel＝R＋G＋B dots)	
Pixel pitch	0.330(H)×0.330(V)	mm
Pixel configuration	R,G,B vertical stripe	
Display mode	Normally white	
Unit outline dimensions *1	243.0(W)×183.8(H)×11.0max(D)	mm
Mass	520(max)	g
Surface treatment	Anti-glare and hard-coating 3H	

*1.Note: excluding backlight cables and pet sheets.

Outline dimensions is shown in page 18.

4. Input Terminals

24	B4	ＢＬＵＥ　data signal	
25	B5	ＢＬＵＥ　data signal(MSB)	
26	GND		
27	ENAB	Signal to settle the display position	【Note2】
28	Vcc	＋3.3/5.0V power supply	
29	Vcc	＋3.3/5.0V power supply	
30	DE_MODE	"H" Fixed mode , "L" DE mode	
31	HANTEN	Horizontal/Vartical display mode select signal	【Note3】

※The shielding case is connected with GND.

【Note1】 The polarity of both synchronous signals are negative

【Note2】 **Fixed mode**：

The horizontal display start timing is settled in accordance with a rising timing of ENAB signal. In case ENAB is fixed "Low", the horizontal start timing is determined as described in 7-2. Do not keep ENAB "High" during operation.

DE mode：

Display start timing is settled in accordance with a rising timing of ENAB signal as described in 7-3.

【Note3】

HANTEN = Low   HANTEN = High
4-2. Backlight driving

Using connector   : BHR-05VS-1 (JST)

CN2   Corresponding connector :SM04(9-E2)B-BHS-1-TB   (JST)

Pin no.	Symbol	Function	Cable color
1	V_{LOW}	Power supply for lamp1 (Low voltage side)	Gray
2	V_{LOW}	Power supply for lamp2 (Low voltage side)	White
3	NC	OPEN	−
4	V_{HIGH}	Power supply for lamp1 (High voltage side)	Pink
5	V_{HIGH}	Power supply for lamp2 (High voltage side)	Blue

5. Absolute Maximum Ratings

Parameter	Symbol	Condition	Ratings	Unit	Remark
Input voltage	V_I	Ta=25℃	$-0.3 \sim Vcc+0.3$	V	【Note1】
supply voltage	Vcc	Ta=25℃	$0 \sim +6$	V	
Storage temperature	Tstg	−	$-30 \sim +70$	℃	【Note2】
Operating temperature (PanelSurface)	Topa	−	$-30 \sim +70$	℃	【Note3】

【Note1】 CK, R0～R5, G0～G5, B0～B5, Hsync, Vsync, ENAB, DE_MODE, HANTEN

【Note2】 Humidity：95%RH Max. at Ta≦40℃.

Maximum wet-bulb temperature at 39℃ or less at Ta>40℃.

No condensation.

【Note3】 There is a possibility of causing deterioration in the irregularity and others of the screen

and the display fineness when preserving or using it from 60 to 70℃.

## 6. Electrical Characteristics

6-1.TFT-LCDpaneldriving   Ta＝25℃

	Parameter	Symbol	Min.	Typ.		Max.	Unit	Remark
Power Supply	Supply voltage	Vcc	+3.0	+3.3	+5.0	+5.5	V	【Note1】
	Current dissipation	Icc	−	200		300	m A	Vcc=3.3V 【Note2】
		Icc	−	130		200	m A	Vcc=5.0V 【Note2】
Permissive input ripple voltage		V_{RF}	−	−		100	mVp-p	
Input voltage (Low)		V_{IL}	−	−		0.8	V	
Input voltage (High)		V_{IH}	2.1	−		−	V	【Note3】
Input current (low)		I_{OL1}	−10	−		10	μ A	V_I=0V 【Note4, Note6】
		I_{OL2}	−10	−		10	μ A	V_I=0V 【Note5, Note6】
Input current (High)		I_{OH1}	−	−		10	μ A	V_I=Vcc 【Note4, Note6】
		I_{OH2}	−	−		800	μ A	V_I=Vcc 【Note5, Note6】

【Note1】
Vcc-turn-on conditions

$0 < T 1 \leqq 1 5 \, m s$
$0 < T 2 \leqq 1 0 \, m s$
$0 < T 3 \leqq 1 0 0 \, m s$
$0 < T 4 \leqq 1 \, s$
$T 5 > 2 0 0 \, m s$
Vcc-dip conditions

1) $2 . 5 V \leqq V c c$
$T d \leqq 1 0 \, m s$
2) $V c c < 2 . 5 V$
Vcc-dip condition should also follow
the Vcc-turn-on conditions.
【Note2】 Typical current situation : 16-gray-bar pattern.
Vcc=+3.3V/＋5.0V

ENAB, DE_MODE, HANTEN

【Note4】 CK, R0~R5, G0~G5, B0~B5, Hsync, Vsync, ENAB

【Note5】 DE_MODE, HANTEN

【Note6】 See below block diagram of input interface

6-2. Backlight driving

The backlight system is an edge-lighting type with double CCFT (Cold Cathode Fluorescent Tube).

The characteristics of single lamp are shown in the following table.

(It is usually required to measure under the following condition. I_L=6.0mA,Ta=25°C±2°C,F_L=60kHz.)

Parameter	Symbol	Min.	Typ.	Max.	Unit	Remark
Lamp current	I_L	3.0	6.0	6.5	mArms	【Note1】
Lamp power consumption	P_L	−	2.82	−	W	【Note2】
Lamp frequency	F_L	35	60	70	KHz	【Note3】
Kick-off voltage	Vs	−	−	1300	Vrms	Ta = -30°C 【Note4】

[Note1] Lamp current is measured with current meter for high frequency as shown below.
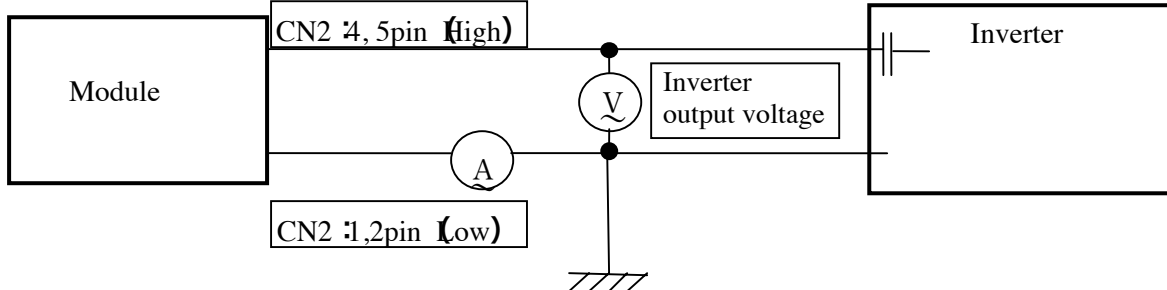

[Note2] Referential data per one CCFT by calculation. (I_L × V_L)
        The data do not include loss at inverter.   (I_L=6.0mArms)

[Note3] Lamp frequency may produce interference with horizontal synchronous frequency,and this may cause beat on the display. Therefore lamp frequency shall be detached as much as possible from the horizontal synchronous frequency and from the harmonics of horizontal synchronous to avoid interference.

[Note4] The open output voltage of the inverter shall be maintained for more than 1s; otherwise the lamp may not be turned on.

[Note5] Lamp is consumables. In the following condition, the life time is 50,000 hour as the reference value and it is not guaranteed in this specification sheets by SHARP.
        Above value is applicable when lamp is placed horizontally
        lamp lifetime is defined that it applied either ① or ② under this condition.
            (Continuous turning on at Ta=25 °C, I_L=6.0mA rms.)
            ① Brightness becomes 50% of the original value under standard condition.
            ② Kick-off voltage at Ta= -30 °C exceeds maximum value.
        (Lamp lifetime may vary if lamp is in portrait position due to the change of mercury density inside the lamp.) .) Lamp life time shortens according to the state of mounting and use.
        In case of operating under lower temp environment, the lamp exhaustion is accelerated and the brightness becomes lower.
        (Continuous operating under lower temp condition for around 1 month may reduce the brightness to half of the original brightness.)
        In case of such usage under lower temp environment, periodical lamp exchange is recommended.

[Note6] The performance of the backlight, for example life time or brightness, is much influenced by the characteristics of the DC-AC inverter for the lamp. When you design or order the inverter, please make sure that a poor lighting caused by the mismatch of the backlight and the inverter (miss-lighting, flicker, etc.) never occur. When you confirm it, the module should be operated in   the same condition as it is installed in your instrument.
        Be sure to use a back light power supply with the safety protection circuit such as the detection circuit for the excess voltage, excess current and or electric discharge waveform.
        Be sure to use the detect circuit by which one side of the CCFT lamps can be controlled independently. Otherwise, when one side of the CCFT is open, the excess current may possibly be applied to the other side of the lamp.

[Note7] It is required to have the inverter designed so that to allow the impedance deviation of the two CCFT lamps and the capacity deviation of barast capacitor.

[Note8] Please make it to the structure not touching directly insulating the high voltage part.
        Please stop the circuit by the protection element such as fuses for generation of heat and the ignition prevention, and use a flame resisting and high material for the substrate and the resin material.

[Note9] Under the environment of 10lx or less, miss-lighting delay may occur.

7. Timing Characteristics of input signals

Timing diagrams of input signal are shown in Fig.2-1, Fig.2-2

7-1. Timing characteristics

Parameter		Symbol	Min.	Typ.	Max.	Unit	Remark
Clock	Frequency	1/Tc	-	25.18	28.33	MHz	-
	High time	Tch	5	-	-	ns	-
	Low time	Tcl	10	-	-	ns	-
	Duty ratio	Th/T	40	50	60	%	-
Data	Setup time	Tds	5	-	-	ns	-

	Pulse width	Tep	2	640	Th-10	clock	-
Vertical display period		TVd	480	480	480	line	-

[Note] In case of lower frequency, the deterioration of display quality, flicker etc.,may be occurred.

7-2. Horizontal display position (Fixed mode)

The horizontal display position is determined by ENAB signal and the input data corresponding to the rising edge of ENAB signal is displayed at the left end of the active area.
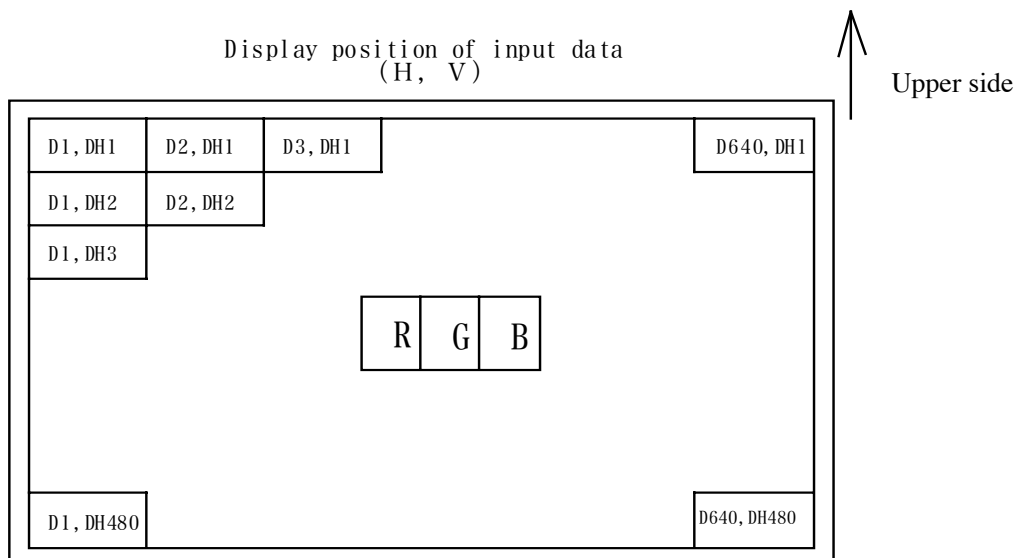

Parameter		symbol	Min.	Typ.	Max.	Unit	Remark
Horizontal sync. signal	Cycle	TH	30.0	31.78	-	μs	-
			750	800	900	clock	-
	Pulse width	THp	2	96	200	clock	-
Vertical sync. signal	Cycle	TV	515	525	560	line	-
	Pulse width	TVp	1	-	34	line	-
Hsync-Clock phase difference		THc	10	-	Tc-10	ns	
Hsync-Vsync phase difference		TVh	0	-	TH-THp	clock	
Hsync-Enable signal phase difference		THe	44	-	TH-664	clock	-

[Note] When ENAB is fixed "Low", the display starts from the data of C104(clock) as shown in Fig.2-1. The vertical display position, TVs is fixed "34" (line).

7-3. Horizontal /Vertical display position （DE mode）

Display start timing is settled in accordance with a rising timing of ENAB signal as shown in Fig.2-2.

[Note] The measurement shall be executed 30 minutes after lighting at rating. (condition:IL=6.0mA rms)
The optical characteristics shall be measured in a dark room or equivalent state with
the method shown in Fig.3 below.
Fig.3 Optical characteristics measurement method

【Note1】 Definitions of viewing angle range:

Normal line

θ_{22} θ_{12} θ_{11} θ_{21}

6 o'clock direction
【Note2】 Definition of contrast ratio:

The contrast ratio is defined as the following.

$$\text{Contrast Ratio (CR)} = \frac{\text{Luminance (brightness) with all pixels white}}{\text{Luminance (brightness) with all pixels black}}$$

【Note3】 Definition of response time:

The response time is defined as the following figure and shall be measured by switching the input signal for "black" and "white" .

white   black   white

Photodetector output (relative Value)

100%
90%

10%
0%

τr τd
time
【Note4】 This shall be measured at center of the screen.

【Note5】 Definition of white uniformity:

White uniformity is defined as the following with five measurements (A～E).

160   320   480 pixel

A   D   120

C   240

B   E   360 pixel
$$\delta w = \frac{\text{Maximum Luminance of five points (brightness)}}{\text{Minimum Luminance of five points (brightness)}}$$

10. Display Quality

The display quality of the color TFT-LCD module shall be in compliance with the Incoming Inspection Standard.

11. Handling Precautions
   a) Be sure to turn off the power supply when inserting or disconnecting the cable.
   b) Be sure to design the cabinet so that the module can be installed without any extra stress such as
      warp or twist.
   c) Since the front polarizer is easily damaged, pay attention not to scratch it.
      Blow away dust on the polarizer with antistatic N_2 blow. It is undesirable to wipe off because a polarizer is sensitive. It is
      recommended to peel off softly using the adhesive tape when soil or finger oil is stuck to the polarizer. When
      unavoidable, wipe off carefully with a cloth for wiping lenses.
   d) Wipe off water drop immediately. Long contact with water may cause discoloration or spots.
   e) When the panel surface is soiled, wipe it with absorbent cotton or other soft cloth.
   f) Since the panel is made of glass, it may break or crack if dropped or bumped on hard surface.
      Handle with care.
   g) Since CMOS LSI is used in this module, take care of static electricity and injure the human earth
      when handling.Observe all other precautionary requirements in handling components.
   h) Since there is a circuit board in the module back, stress is not added at the time of a design assembly.
      Please make it like. If stress is added, there is a possibility that circuit parts may be damaged.
   i) Protection film is attached to the module surface to prevent it from being scratched .
      Peel the film off slowly , just before the use, with strict attention to electrostatic charges.
      Blow off 'dust' on the polarizer by using an ionized nitrogen.
   j) The polarizer surface on the panel is treated with Anti-Glare for low reflection. In case of attaching
      protective board over the LCD, be careful about the optical interface fringe etc. which degrades display quality.
   k) Do not expose the LCD panel to direct sunlight. Lightproof shade etc. should be attached when LCD
      panel is used under such environment.
   l) Connect GND to 4 place of mounting holes to stabilize against EMI and external noise.
   m) There are high voltage portions on the backlight and very dangerous. Careless touch may lead to
      electrical shock. When exchange lamps or service, turn off the power without fail.
   n) When handling LCD modules and assembling them into cabinets, please avoid that long-term storage in
      the environment of oxidization or deoxidization gas and the use of such materials as reagent,solvent,
      adhesive, resin, etc. which generate these gasses, may cause corrosion and discoloration of the LCD modules.
   o) Cold cathode fluorescent lamp in LCD panel contains a small amount of mercury, please follow local
      ordinances or regulations for disposal.
   p) Be careful of a back light lead not to pull by force at the time of the wiring to an inverter, or line processing.
   q) When install LCD modules in the cabinet, please tighten with "torque=$0.294\pm0.02N\cdot m(3.0\pm0.2kgf\cdot cm)$".
      Be sure to confirm it in the same condition as it is installed in your instrument.
   r) Liquid crystal contained in the panel may leak if the LCD is broken. Rinse it as soon as possible if it gets
      inside your eye or mouth by mistake.
   s) Notice : Never dismantle the module , because it will cause failure. Please don't remove the fixed tape,
      insulateing tape etc that was pasted on the original module. (except for protection film of the panel and
      the crepe tape(yellow tape) of fixing lamp cable temporarily.)
   t) Be careful when using it for long time with fixed pattern display as it may cause afterimage.
      (Please use a screen saver etc., in order to avoid an afterimage.)
   u) Adjusting volume have been set optimally before shipment, so do not change any adjusted value.
      If adjusted value is changed, the specification may not be satisfied.
   v) If a minute particle enters in the module and adheres to an optical material, it may cause display
      non-uniformity issue, etc. Therefore, fine-pitch filters have to be installed to cooling and inhalation hole
      if you intend to install a fan.
   w) The lamp used for this product is very sensitive to the temperature.
      Luminance decreases rapidly when it is used for a long time or repeatedly under the environment of the
      low temperature or the module is being cooled. Please avoid the continuous or repeating use of it under such an
      environment. It may decrease up to 50% of the initial luminance in about one month under the low temperature
      environment. Please consult our company when it is used under the environment like the above mentioned.

12.Packing form

Product countries / Areas	JAPAN, CHINA
Piling number of cartons	6 (MAX)
Packing quantity in one carton	20pcs
Carton size　[mm]	486(W) × 403(D) × 322(H)
Total mass of one carton filled with full modules	13kg (MAX)
Packing form is shown	Page 19

13．Reliability test items

| No.	Test item	Conditions	Remark
1	High temperature storage test	Ta=70℃　　240h	Panel surface
2	Low temperature storage test	Ta= -30℃　　240h	
3	High temperature & high humidity operation test	Ta=40℃ ; 95%RH　240h (No condensation)	
4	High temperature operation test	Ta=70℃　　240h	Panel surface
5	Low temperature operation test	Ta= -30℃　　240h	
6	Vibration test (non- operating)	Frequency: 10～57Hz/Vibration width (one side):0.153mm : 57～500Hz/Gravity:19.6m/s^2 Sweep time : 11 minutes Test period : 3 hours (1 hour for each direction of X,Y,Z)	
7	Shock test (non- operating)	Max. gravity : 490m/s^2 Pulse width : 11ms, half sine wave Direction : ±X,±Y,±Z　　once for each direction.	
8	ESD test	Contact discharge　　(150pF 330Ω) non-operating = ±10kV, operating = ±8kV Atmospheric discharge　(150pF 330Ω) non-operating = ±20kV, operating = ±15kV	
9	EMI	Measurement in 10m site Display position on the screen = "H"(full-screen) GND to 4 place = un-connect, Vcc / Vsignal = typ.	VCCI (Class B)

[Result Evaluation Criteria]
Under the display quality test conditions with normal operation state, these shall be no change which may affect practical display function. (normal operation state：Temperature:15～35℃, Humidity:45～75％, Atmospheric pressure:86～106kpa)

The figure right below is written to the packing box of the settlement for the RoHS restriction.
R.C.（RoHS Compliance）means it suits the RoHS directive.
This LCD module is compliant with RoHS Directive.

Internal Use Only
R. C.

14-2. If any problem occurs in relation to the description of this specification, it shall be resolved
through discussion with spirit of cooperation.

15. Storage conditions

  <Environmental condition range of storage temperature and humidity>

 Temperature   0 to 40 degrees Celsius

 Relative humidity 95% and below

 【Note】 Please refer below as a mean value of the environmental conditions.

     Summer time temperature 20 to 35 degrees Celsius

            humidity 85% and below

     Winter time   temperature 5 to 15 degrees Celsius

            humidity   85% and below

   Please maintain within 240 hours of accumulated length of storage time, with conditions of

   40 degrees Celsius and room humidity of 95%.

 Direct sun light

  Please keep the product in a dark room or cover the product to protect from direct sun light.

 Atmospheric condition

  Please refrain from keeping the product with possible corrosive gas or volatile flux.

 Prevention of dew

  * Please store the product carton either on a wooden pallet or a stand / rack to prevent dew.

   Do not place directly on the floor. In addition, to obtain moderate ventilation in between the pallet's

   Top and bottom surfaces, pile the cartons up in a single direction and in order.

  * Please place the product cartons away from the storage wall.

  * Please maintain the storage area with an appropriate ventilation. It is recommendable to furnish

   the storage area with equipments such as ventilation systems.

   * Please maintain the ambient temperature within the range of natural environmental fluctuation.

 Storage period

  Within above mentioned conditions, maximum storage period should be one year.
