2009/09/18		New Release	Emil

1 Features

4.3 inch Amorphous-TFT-LCD (Thin Film Transistor Liquid Crystal Display) module. This module is composed of a 4.3" TFT-LCD panel, LCD controller, power driver circuit, touch panel and backlight unit.

- 1.1 TFT Panel Feature :
 - (1) Construction: 4.3" a-Si color TFT-LCD, White LED Backlight and PCB.
 - (2) Resolution (pixel): 480(R.G.B) X 272
 - (3) Number of the Colors : 262K colors (R , G , B 6 bit digital each)
 - (4) LCD type : Transmissive Color TFT LCD (normally White)
 - (5) Interface: 40 pin pitch 0.5
 - (6) Power Supply Voltage: 3.3V single power input. Built-in power supply circuit.
 - (7) Viewing Direction: 6 O'clock (The direction it's hard to be discolored):
- 1.2 LCD Controller Feature:
 - (1) MCU interface 8/9/16/18 bit 80&68 series MCU interface.
 - (2) Display RAM size : 640x320x3x6 bits. Ex : 320x240 two frame buffer with 262K colors.
 - (3) Arbitrary display memory start position selection.
 - (4) MCU interface : 8 bit / 9 bit / 16bit / 18 bits 80/68 MPU interface.
 - (5) 8 bit / 16 bit interface support 65K (R5G6B5) /262K(R6G6B6) colors data format.
 - (6) 9 bit / 18 bit interface support 262K(R6G6B6) colors data format only.

Item	Specifications	Unit
Display resolution(dot)	480(R.G.B.) (W) x 272(H)	mm
Active area	95.04 (W) x 53.856 (H)	mm
Screen size	4.3 (Diagonal)	mm
Pixel size	0.198 (W) x 0.198 (H)	um
Color configuration	R.G.B stripe	
Overall dimension	105.5(W) x 67.2(H) x 7.61(D)	mm
Weight	T.B.D	mg
Backlight unit	LED	

2 Physical specifications

3 Default Setting & Option

• Interface :

The user can select the MCU interface by change the Jumper & Resister Array.

Setting	JP1	RA1	RA2	RA3	RA4	Remark
Interface Type						
80-18Bit interface	1,2 short 2,3 open	2K ohm	OPEN	OPEN	OPEN	
80-16Bit interface	1,2 short	OPEN	2K	OPEN	OPEN	Default
	2,3 open		ohm			
80-9Bit interface	1,2 short 2,3 open	OPEN	OPEN	2K ohm	OPEN	
80-8Bit interface	1,2 short 2,3 open	OPEN	OPEN	OPEN	2K ohm	
68-18Bit interface	1,2 open 2,3 short	2K ohm	OPEN	OPEN	OPEN	
68-16Bit interface	1,2 open 2,3 short	OPEN	2K ohm	OPEN	OPEN	
68-9Bit interface	1,2 open 2,3 short	OPEN	OPEN	2K ohm	OPEN	
68-8Bit interface	1,2 open 2,3 short	OPEN	OPEN	OPEN	2K ohm	

• LED Driver:

The user can select the LED driver built-in or not.

Pin Define Interface Type	PIN3 LEDA/PWM	PIN4 LEDK	Remark
Without LED Driver	LED Anode	LED Cathode	
With LED Driver	PWM The PWM pin combined enable and brightness adjust function. When PWM=High constantly, the LED back-light is turn on. When PWM=GND constantly, the LED back-light is turn off. When PWM signal (100Hz to 1KHz) input, the LED Back-light brightness is relative to duty cycle of the PWM signal.	NC This pin must be open	Default

• Touch panel and Touch panel controller:

Pin Define Option	SK/X1	DO/X2	DI/Y1	TPCS/Y2	IRQ	Remark
Without TP	NC	NC	NC	NC	NC	
With TP / Without TP controller	X1	X2	Y1	Y2	NC	Default
With TP / With TP controller	SK	DO	DI	TPCS	IRQ	

The user can select the with TP controller or without TP controller.

If user want to change the default setting for mass production, please contact with Ampire. We'll apply a new P/N for you.

4 Electrical specification

4.1 Absolute max. ratings

4.1.1 Electrical Absolute max. ratings

ltem	Symbol	Condition	Min.	Max.	Unit	Remark
Power voltage	VDD	VSS=0	-0.3	T.B.D	V	
Input voltege	V _{in}		-0.3	VDD+0.3	V	Note 1

Note1: /CS,/WR,/RD,RS,DB0~DB17

4.1.2 Environmental Absolute max. ratings

	OPER	ATING	STOF	RAGE	
ltem	MIN	MAX	MIN	MAX	Remark
Temperature	-20	70	-30	80	Note2,3,4,5,6,7
Humidity	Note1		idity Note1 Note1		
Corrosive Gas	Not Acceptable		Not Acc	eptable	

Note1 : Ta <= 40°C : 85% RH max

Ta > 40° C : Absolute humidity must be lower than the humidity of 85%RH at 40° C

Note2 : For storage condition Ta at -30°C < 48h , at 80°C < 100h

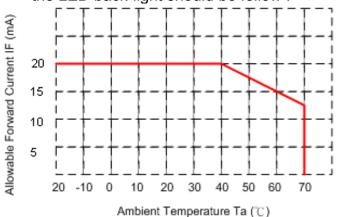

For operating condition Ta at -20°C < 100h

- Note3 : Background color changes slightly depending on ambient temperature. This phenomenon is reversible.
- Note4 : The response time will be slower at low temperature.
- Note5 : Only operation is guarantied at operating temperature. Contrast ,

response time, another display quality are evaluated at +25°C

Note6 :

 LED BL : When LCM is operated over 40°C ambient temperature, the I_{LED} of the LED back-light should be follow :

Note7 : This is panel surface temperature, not ambient temperature. Note8 :

• LED BL:When LCM be operated over than 40°C, the life time of the LED back-light will be reduced.

ltem	Symbol	Ratings	Unit	Remark
Pulse Forward Current	IF	100	mA	
Forward Current	IF	30	mA	
Reverse Voltage	VR	35	V	
Power Dissipation	Po	0.84	W	

4.1.3 LED back-light Unit Absolute max. ratings

4.2 Electrical characteristics

Typical operating conditions (VSS=0V)							
Item		Symbol	Min.	Тур.	Max.	Unit	Remark
Power supp	ly	VDD	3.0	3.3	5.0	V	
Input Voltage	H Level	VIH	2.0	-	5.5	V	Note 1
for logic	L Level	V _{IL}	VSS	-	0.8	V	NOLE 1
Output Voltage for	H Level	V _{OH}	2.4	-	VDD	V	Note 2
Logic	L Level	V _{OL}	VSS		0.4	V	note 2
Power Supply current		IDD	-	450	-	mA	Note 3

4.2.1 DC Electrical characteristic of the LCD

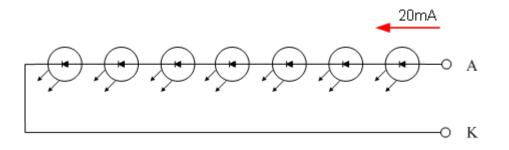

Typical operating conditions (1/SS=0)/1

Note1: With 5V Tolerance Input , /CS, /WR,/RD,RS,DB0~DB17 Note2: DB0~DB17

Note3: fv =60Hz , Ta=25°C , Display pattern : All Black

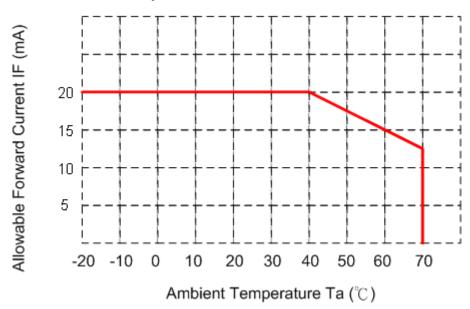

4.2.2	Electrical characteristic of LED Back-light
-------	---

Paramenter	Symbol	Min.	Тур.	Max.	Unit	Condiction
LED voltage	Vak	-	23.1		V	l _{LED} =20mA,Ta=25°C
LED forward current	I. _{LED} .		20		mA	Ta=25°C
LED forward current	I. _{LED} .		15		mA	Ta=60°C

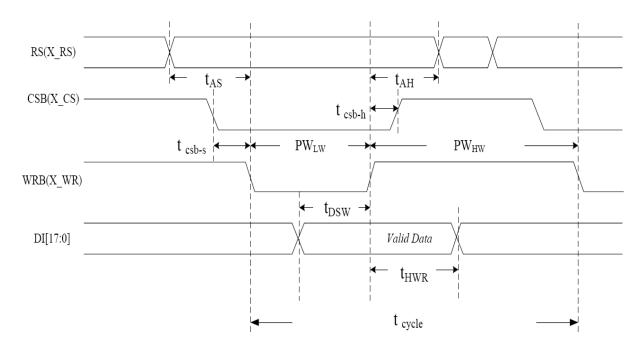

■ The constant current source is needed for white LED back-light driving.

When LCM is operated over 60°C ambient temperature, the $\mathsf{I}_{\mathsf{LED}}$ of the LED back-light

should be adjusted to 15 mA.

4.3.1 80 series Timing

Symbol	Parameter	Min	Тур	Max	Unit	Remark
t cycle	Enable cycle time	100	200		ns	
РѠнѡ	Enable high-level pulse width	66	70		ns	
PWLW	Enable low-level pulse width	33	130		ns	
tas	RS setup time	16	25		ns	
tан	RS hold time	16	45		ns	
tosw	Write data setup time	50	50		ns	
t HWR	Write data hold time	40	50		ns	
tcsb-s	CSB setup time	16	20		ns	
t csb-h	CSB hold time	16	30		ns

vvinte cili	omationy	Yw		(0.320)	(0.350)	(0.380)		p. 0.003 p0.

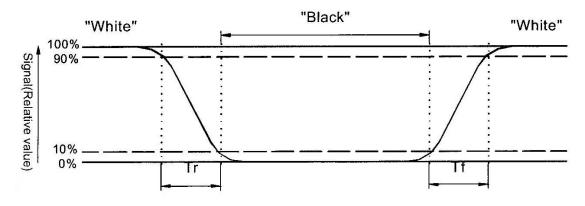

5.1 Optical characteristic :

()For reference only. These data should be update according the prototype. Note 1:

● LED BL : Ambient temperature=25°C, and lamp current I_{LED}=20mA.To be measured in the dark room.

- Note 2:To be measured on the center area of panel with a viewing cone of 1°by Topcon luminance meter BM-7,after 10 minutes operation.
- Note 3.Definition of response time:

The output signals of photo detector are measured when the input signals are changed from "black" to "white"(falling time) and from "white" to "black" (rising time),respectively. The response time is defined as the time interval between the 10% and 90% of amplitudes. Refer to figure as below.

Note 4.Definition of contrast ratio:

Contrast ratio is calculated with the following formula.

Contrast ratio(CR)= Photo detector output when LCD is at "White" state Photo detector Output when LCD is at "Black" state

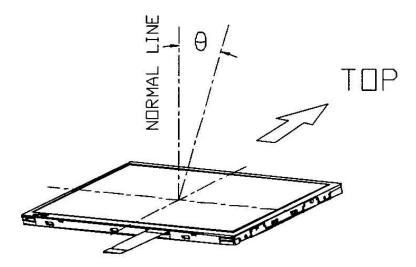

Note 5:White Vi=Vi50 +1.5V

Black V_i=V_{i50} +2.0V

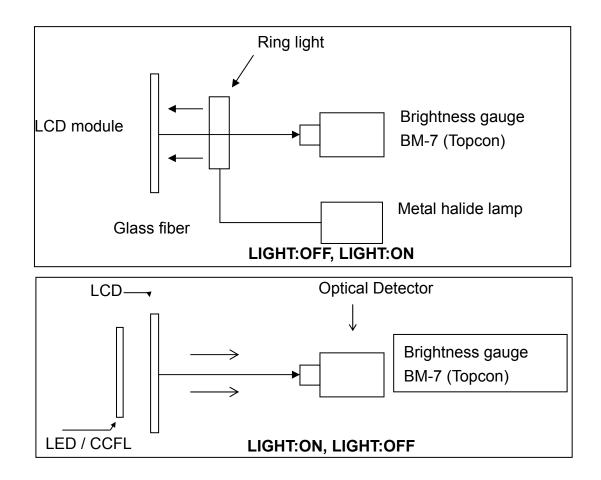

"±"means that the analog input signal swings in phase with V_{COM} signal. " $_+$ " means that the analog input signal swings out of phase with V_{COM} signal.

 V_{i50} : The analog input voltage when transmission is 50%. The 100% Transmission is defined as the transmission of LCD panel when all the Input terminals of module are electrically opened.

Note 6.Definition of viewing angle, Refer to figure as below.

Note 7.Measured at the center area of the panel when all the input terminals of LCD panel are electrically opened.

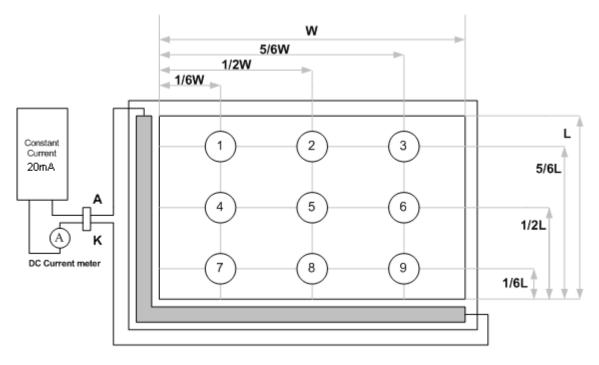

5.2 Optical characteristic of the LED Back-light

ITEM	MIN	TYP	MAX	UNIT	Condition
Bare Brightness		3300		Cd/m2	I _{LED} = 20 mA,Ta=25℃
AVG. X of 1931 C.I.E.	(0.26)	(0.29)	(0.32)		I _{LED} = 20 mA,Ta=25℃
AVG. X of 1931 C.I.E.	(0.25)	(0.28)	(0.31)		I _{LED} = 20 mA,Ta=25℃
Brightness Uniformity	80			%	I _{LED} = 20 mA,Ta=25℃

()For reference only. These data should be update according the prototype.

Note1 : Measurement after 10 minutes from LED BL operating.

Note2 : Measurement of the following 9 places on the display.

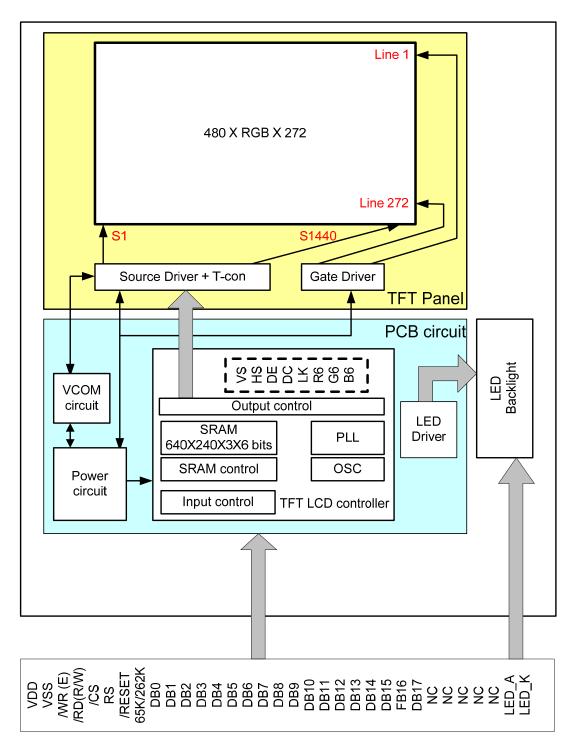

Note3: The Uniformity definition (Min Brightness / Max Brightness) x 100%

To simplify the address control of display RAM access, the window area address function allows for writing data only within a window area of display RAM specified by registers REG[00]~REG[07].

After writing data to the display RAM, the Address counter will be increased within setting window address-range which is specified by

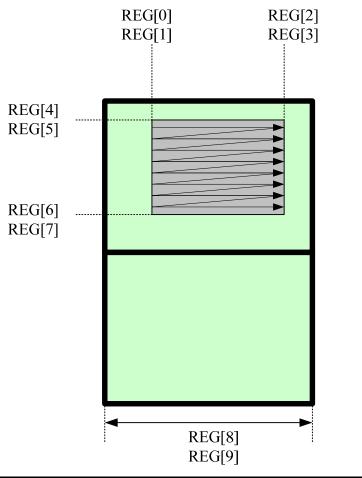

MIN X address (REG[0] & REG[1])

MAX X address (REG[2] & REG[3])

MIN Y address (REG[4] & REG[5])

MAX Y address (REG[6] & REG[7])

Therefore, data can be written consecutively without thinking the data address.

10 QUALITY AND RELIABILITY

10.1 TEST CONDITIONS

Tests should be conducted under the following conditions : Ambient temperature : $25 \pm 5^{\circ}C$ Humidity : $60 \pm 25\%$ RH.

10.2 SAMPLING PLAN

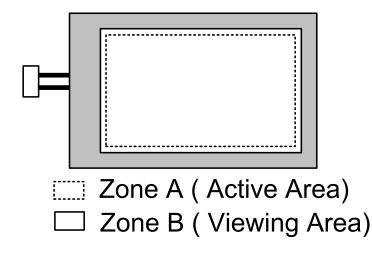

Sampling method shall be in accordance with MIL-STD-105E , level II, normal single sampling plan .

10.3 ACCEPTABLE QUALITY LEVEL

A major defect is defined as one that could cause failure to or materially reduce the usability of the unit for its intended purpose. A minor defect is one that does not materially reduce the usability of the unit for its intended purpose or is an infringement from established standards and has no significant bearing on its effective use or operation.

10.4 APPEARANCE

An appearance test should be conducted by human sight at approximately 30 cm distance from the LCD module under flourescent light. The inspection area of LCD panel shall be within the range of following limits.

10.5 INSPECTION QUALITY CRITERIA

No.	ltem	Criterion	for defects	Class of Defect	Accept able level
1	Non display	No non display is allowed		Major	0.4
2	Irregular operation	No irregular operation is all	Major	0.4	
3	Short	No short are allowed		Major	0.4
4	Open	Any segments or commor are rejectable.	n patterns that don't activate	Major	0.4
5	Black/White spot (I)	Size D (mm) $D \le 0.1$ $0.1 < D \le 0.15$ $0.15 < D$ $\%$ 1: The distance of two defects	Acceptable number Ignore 2 %1 0 s must be more than 20mm.	Minor	1.5
6	Dot Defect	Bright dot Dark dot Total dot defect (Bright dot + Dark dot) Minimum distance betweer dark dot and dark dot	$ \begin{array}{c c} 1 \\ N \leq 3 \\ N \leq 4 \\ 0.1 < D \leq 0.3 \text{mm,} N \leq 2 \\ \end{array} $	Minor	1.5
7	Back Light	1. No Lighting is rejectable 2. Flickering and abnormal		Major	0.4
8	Display pattern	A + B ≥ 0.30 0 < C Note: 1. Acceptable up to 3 da	$\frac{\text{D} + \text{E}}{2} \le 0.25 \frac{\text{F} + G}{2} \le 0.25$	Minor	1.5
9	Blemish & Foreign matters Size: $D = \frac{A+B}{2}$	Size D (mm) D ≤ 0.15 0.15 < D ≤ 0.20 0.20 < D ≤ 0.30 0.30 < D	Acceptable number Ignore 3 2 0	Minor	1.5

10	Scratch on Polarizer	Width (mm)Length (mm)Acceptable number $W \leq 0.03$ $L \leq 2.0$ 2Note: The distance of two defects must be more than 20mm.	Minor	1.5
11	Bubble in polarizer	Zone A Active area : No bubble are allowed. Zone B Viewing area: <u><</u> 0.05mm ² , N <u><</u> 1	Minor	1.5
12	Stains on LCD panel surface	Stains that cannot be removed even when wiped lightly with a soft cloth or similar cleaning too are rejectable.	Minor	1.5
13	Rust in Bezel	Rust which is visible in the bezel is rejectable.	Minor	1.5
14	Defect of land surface contact (poor soldering)	Evident crevices which is visible are rejectable.	Minor	1.5
15	Parts mounting	 Failure to mount parts Parts not in the specifications are mounted Polarity, for example, is reversed 	Major Major Major	0.4
16	Parts alignment	 LSI, IC lead width is more than 50% beyond pad outline. Chip component is off center and more than 50% of the leads is off the pad outline. 	Minor Minor	1.5
	Conductive	1. 0.45<φ ,N≧1	Major	0.4
17	foreign matter (Solder ball, Solder chips)	 0.30<φ≤0.45 ,N≥1 φ:Average diameter of solder ball (unit: mm) 0.50<l ,n≥1<br="">L: Average length of solder chip (unit: mm)</l> 	Minor Minor	1.5 1.5
18	Faulty PCB correction	 Due to PCB copper foil pattern burnout, the pattern is connected, using a jumper wire for repair; 2 or more places are corrected per PCB. Short circuited part is cut, and no resist coating has been performed. 	Minor Minor	1.5

11 RELIABILITY TEST CONDITIONS

ITEM	CONDITIONS	NOTE
HIGH TEMPERATURE OPERATION	70℃,240Hrs	
HIGH TEMPERATURE AND HIGH HUMIDITY OPERATION	60 $^\circ\!$	
HIGH TEMPERATURE STORAGE	80℃,240Hrs	
LOW TEMPERATURE OPERATION	-20℃,240Hrs	
LOW TEMPERATURE STORAGE	-30℃,240Hrs	
THERMAL SHOCK	-30℃(1Hr) ~80℃(1Hr) 200Cycle	

12 USE PRECAUTIONS

12.1 Handling precautions

- 1) The polarizing plate may break easily so be careful when handling it. Do not touch, press or rub it with a hard-material tool like tweezers.
- 2) Do not touch the polarizing plate surface with bare hands so as not to make it dirty. If the surface or other related part of the polarizing plate is dirty, soak a soft cotton cloth or chamois leather in benzine and wipe off with it. Do not use chemical liquids such as acetone, toluene and isopropyl alcohol. Failure to do so may bring chemical reaction phenomena and deteriorations.
- 3) Remove any spit or water immediately. If it is left for hours, the suffered part may deform or decolorize.
- 4) If the LCD element breaks and any LC stuff leaks, do not suck or lick it. Also if LC stuff is stuck on your skin or clothing, wash thoroughly with soap and water immediately.

12.2 Installing precautions

- 1) The PCB has many ICs that may be damaged easily by static electricity. To prevent breaking by static electricity from the human body and clothing, earth the human body properly using the high resistance and discharge static electricity during the operation. In this case, however, the resistance value should be approx. $1M\Omega$ and the resistance should be placed near the human body rather than the ground surface. When the indoor space is dry, static electricity may occur easily so be careful. We recommend the indoor space should be kept with humidity of 60% or more. When a soldering iron or other similar tool is used for assembly, be sure to earth it.
- 2) When installing the module and ICs, do not bend or twist them. Failure to do so may crack LC element and cause circuit failure.
- 3) To protect LC element, especially polarizing plate, use a transparent protective plate (e.g., acrylic plate, glass etc) for the product case.
- 4) Do not use an adhesive like a both-side adhesive tape to make LCD surface (polarizing plate) and product case stick together. Failure to do so may cause the polarizing plate to peel off.

12.3 Storage precautions

- Avoid a high temperature and humidity area. Keep the temperature between 0°C and 35°C and also the humidity under 60%.
- 2) Choose the dark spaces where the product is not exposed to direct sunlight or fluorescent light.
- 3) Store the products as they are put in the boxes provided from us or in the same

conditions as we recommend.

12.4 Operating precautions

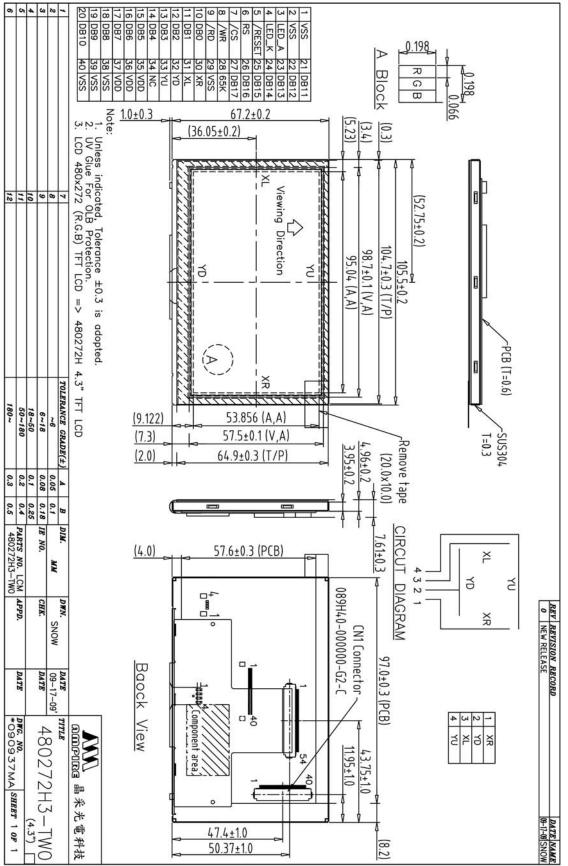

- Do not boost the applied drive voltage abnormally. Failure to do so may break ICs. When applying power voltage, check the electrical features beforehand and be careful. Always turn off the power to the LC module controller before removing or inserting the LC module input connector. If the input connector is removed or inserted while the power is turned on, the LC module internal circuit may break.
- 2) The display response may be late if the operating temperature is under the normal standard, and the display may be out of order if it is above the normal standard. But this is not a failure; this will be restored if it is within the normal standard.
- 3) The LCD contrast varies depending on the visual angle, ambient temperature, power voltage etc. Obtain the optimum contrast by adjusting the LC dive voltage.
- 4) When carrying out the test, do not take the module out of the low-temperature space suddenly. Failure to do so will cause the module condensing, leading to malfunctions.
- 5) Make certain that each signal noise level is within the standard (L level: 0.2Vdd or less and H level: 0.8Vdd or more) even if the module has functioned properly. If it is beyond the standard, the module may often malfunction. In addition, always connect the module when making noise level measurements.
- 6) The CMOS ICs are incorporated in the module and the pull-up and pull-down function is not adopted for the input so avoid putting the input signal open while the power is ON.
- 7) The characteristic of the semiconductor element changes when it is exposed to light emissions, therefore ICs on the LCD may malfunction if they receive light emissions. To prevent these malfunctions, design and assemble ICs so that they are shielded from light emissions.
- 8) Crosstalk occurs because of characteristics of the LCD. In general, crosstalk occurs when the regularized display is maintained. Also, crosstalk is affected by the LC drive voltage. Design the contents of the display, considering crosstalk.

12.5 Other

- 1) Do not disassemble or take the LC module into pieces. The LC modules once disassembled or taken into pieces are not the guarantee articles.
- 2) The residual image may exist if the same display pattern is shown for hours. This residual image, however, disappears when another display pattern is shown or the drive is interrupted and left for a while. But this is not a problem on reliability.

3) AMIPRE will provide one year warrantee for all products and three months warrantee for all repairing products.
