4. Application Circuit

4. AC Timing

a. Power on/off sequence

The LCD adopts high voltage driver IC, so it could be permanently damaged under a wrong power on/off sequence. The suggested LCD power sequence is below:

Power on sequence: VDD→Reset→DCLK(Hsync,Vsync,Data)→DISP→ LED UNIT.

Power-Off LED UNIT→DISP →DCLK(Hsync,Vsync,Data)→ VDD

	y	$\theta = 0^\circ$	0.28	0.33	0.38		
Uniformity		-	70	-	-	%	Note 10

Note 1: Measurement should be performed in the dark room, optical ambient temperature =25°C, and backlight current $I_L=80$ mA

Note 2: To be measured on the center area of panel with a field angle of 1° by Topcon luminance meter BM-7, after 10 minutes operation.

Note 3: Definition of response time:

The output signals of photo detector are measured when the input signals are changed from "black" to "white"(falling time) and from "white" to "black"(rising time), respectively.

Note 4. From liquid crystal characteristics, response time will become slower and the color of panel will become darker when ambient temperature is below 25°C.

$$\text{Contrast ratio} = \frac{\text{Photo detector output when LCD is at "White" state}}{\text{Photo detector output when LCD is at "Black" state}}$$

Note 5. Contrast ratio is calculated with the following formula.

Note 6. White $V_i = V_{i50} \pm 1.5V$

Black $V_i = V_{i50} \pm 2.0V$

“±” means that the analog input signal swings in phase with COM signal.

“μ” means that the analog input signal swings out of phase with COM signal.

V_{i50} :The analog input voltage when transmission is 50%

The 100% transmission is defined as the transmission of LCD panel when all the input terminals of module are electrically opened.

Note 7. Definition of viewing angle: refer to figure as below.

Note 8. The viewing angles are measured at the center area of the panel when all the input terminals of LCD panel are electrically opened.

Note 9. Brightness is measured at the center of the display perpendicular to the panel surface.

Note 10. Luminance Uniformity is defined as following within the 9 measurements (L1~L9),

Luminance Uniformity(%) = Minimum luminance(brightness)/Maximum luminance(brightness)
