## 1. Operating Precautions

- 1) Display area (Polarizer) of TFT-LCD Module is easily to be damaged, please be cautious and not to scratch it.
- 2) Be sure to power off your machine before connecting or disconnecting your signal cable to TFT-LCD Module.
- 3) Wipe off water drop on display area immediately. Long contact with water may cause discoloration or spots.
- 4) When the panel surface is soiled, wipe it with absorbent cotton or soft cloth.
- 5) Display area (Glass) of TFT-LCD Module may be broken or cracked if bump Module against hard object.
- 6) To avoid ESD (Electro Static Discharge) damage, be sure to ground yourself before handling TFT-LCD Module.
- 7) Do not open nor modify the TFT-LCD module assembly.
- 8) Do not press the reflector sheet at the back of the module to any direction.
- 9) In case if TFT-LCD module has to be put back into the packing container slot after it was taken out from the container, do not press the center of the LED Reflector edge. Instead, press at the far ends of the LED Reflector edge softly. Otherwise the TFT-LCD Module may be damaged.
- 10) When inserting or removing of your signal cable to TFT-LCD Module, be sure not to apply abnormal force (rotate, tilt...etc.) to the Connector of the TFT-LCD Module.
- 11) TFT-LCD Module is not allowed to be twisted & bent even force is added on module in a very short time. Please design your display product well to avoid external force applying to module by end-user directly.
- 12) Small amount of materials without flammability grade are used in the TFT-LCD module. The TFT-LCD module should be supplied by power complied with requirements of Limited Power Source (IEC60950 or UL1950), or be applied exemption.
- 13) Severe temperature condition may result in different luminance, response time.
- 14) Continuous operating TFT-LCD Module under high temperature environment may accelerate LED light bar exhaustion and reduce luminance dramatically.
- 15) The data on this specification sheet is applicable when TFT-LCD module is placed in landscape position.
- 16) Continuous displaying fixed pattern may induce image sticking. It's recommended to use screen saver or moving content periodically if fixed pattern is displayed on the screen.

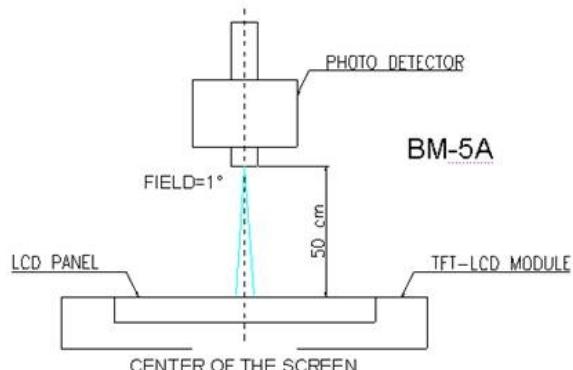

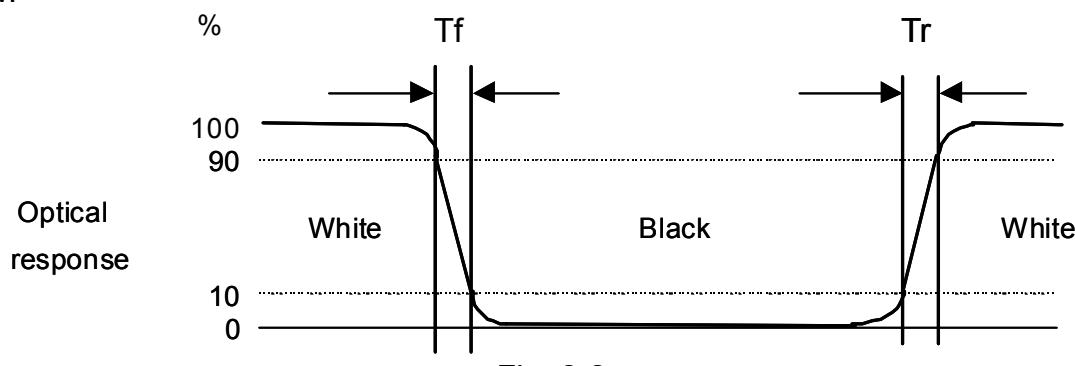

Fig. 2-1

**Note 2 : Definition of contrast ratio (CR)**

$$\text{Contrast ratio (CR)} = \frac{\text{Brightness @ "White" state}}{\text{Brightness @ "Black" state}}$$

**Note 3 : Definition of response time**

The output signals of photo detector are measured when the input signals are changed from “White” to “Black” (falling time) and from “Black” to “White” (rising time), respectively. The response time interval definition is between 10% and 90% of amplitude. Please refer to the figure as below.

**Note 4 : Definition of viewing angle**

Viewing angle is the measurement of contrast ratio  $\geq 10$ , at the screen center, over  $180^\circ$  horizontal and  $180^\circ$  vertical range. The  $180^\circ$  horizontal ( $\theta_L$ ,  $\theta_R$ ) and  $180^\circ$  vertical ( $\phi_H$ ,  $\phi_L$ ) range are illustrated as following figure.

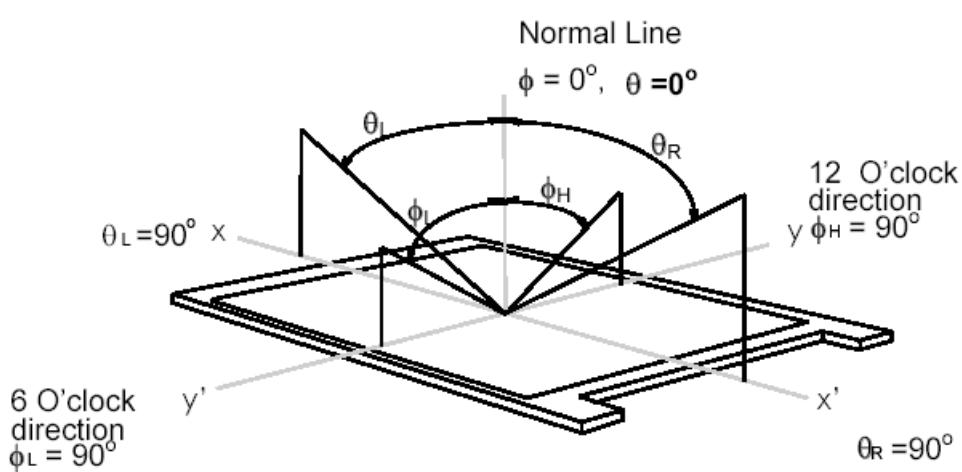

Fig. 2-3

### Note 5 : Definition of 9 points position on Active Area

The luminance uniformity of 9 points is defined by dividing the maximum luminance value by the minimum luminance value at full white condition.

$$\text{Luminance Uniformity (\%)} = \frac{\text{Maximum Brightness of nine points}}{\text{Minimum Brightness of nine points}}$$

**Note 1 :** The input signal rise time and fall time ( $tr$ ,  $tf$ ) is specified at 15 ns or less.

**Note 2 :** Measuring of input signals are  $0.30 \times VDDI$  for low state and  $0.7 \times VDDI$  for high state.

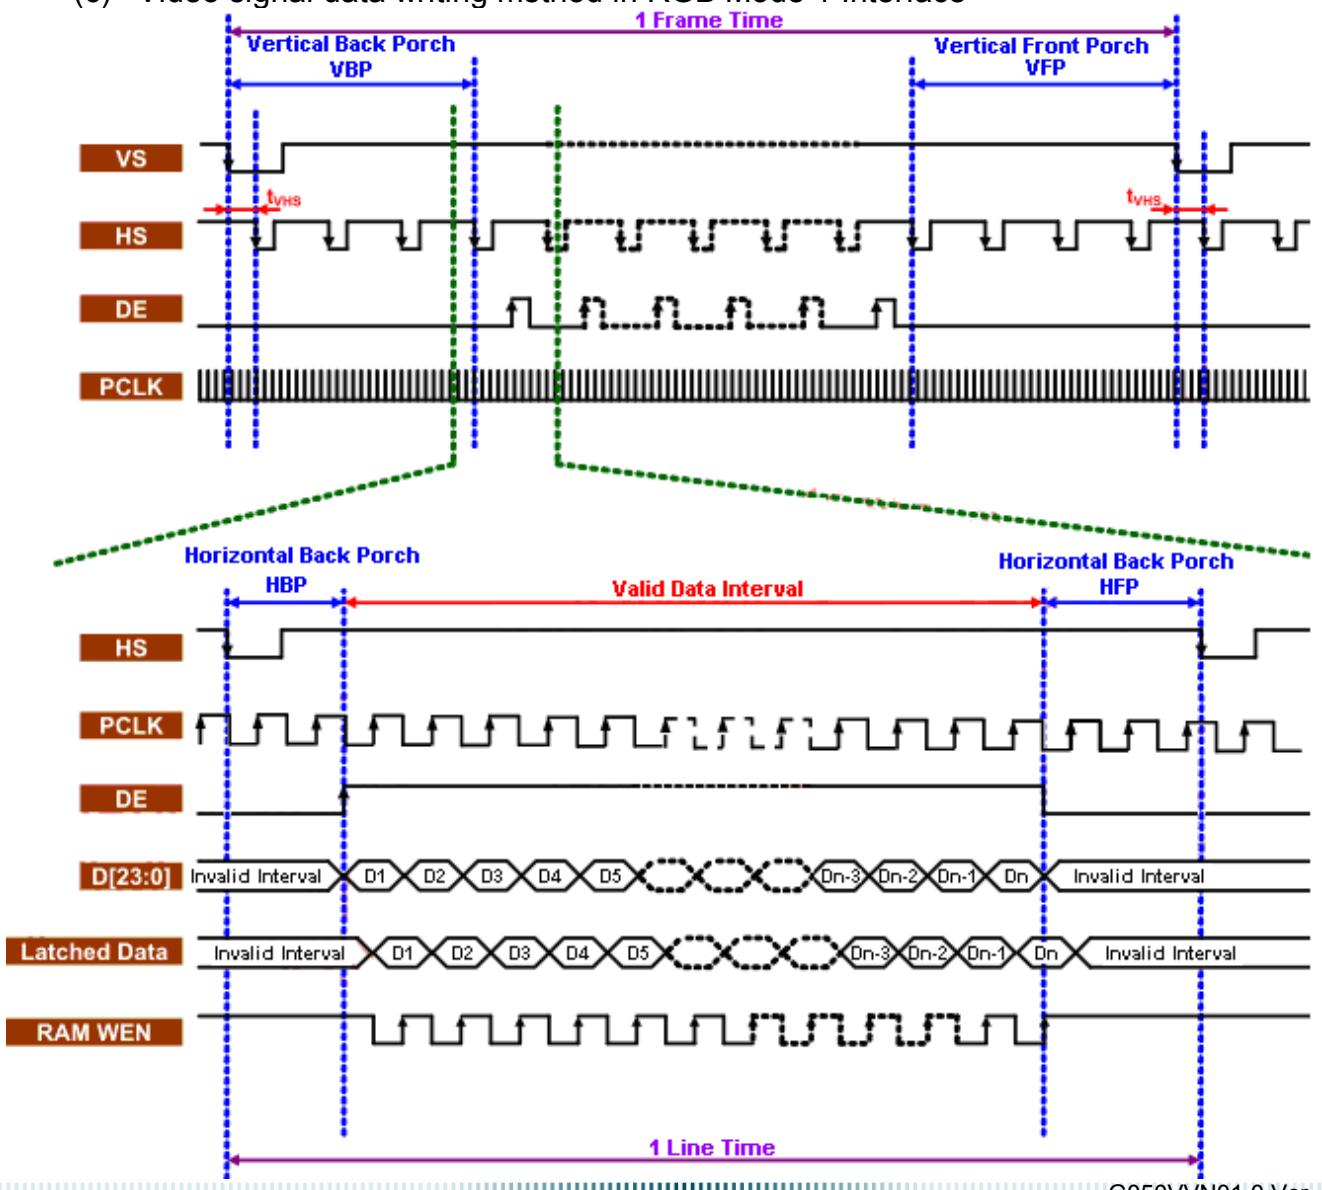

## (b) RGB Interface Mode Set

RGB I/F Mode	PCLK	DE	D23-D0	VS	HS	Register VFP[7:0], VBP[7:0] HFP[7:0], HBP[7:0]
RGB Mode 1 (SYNC + DE)	Used	Used	Used	Used	Used	Not used
RGB Mode 2 (SYNC Only)	Used	Not used	Used	Used	Used	Used

**In RGB Mode 1 :** Writing data to line buffer is done by PCLK and Video Data Bus (D23 to D0), when DE is high state. The external clocks (PCLK, VS and HS) are used for internal displaying clock. So, controller must always transfer PCLK, VS and HS signal to IC DDI.

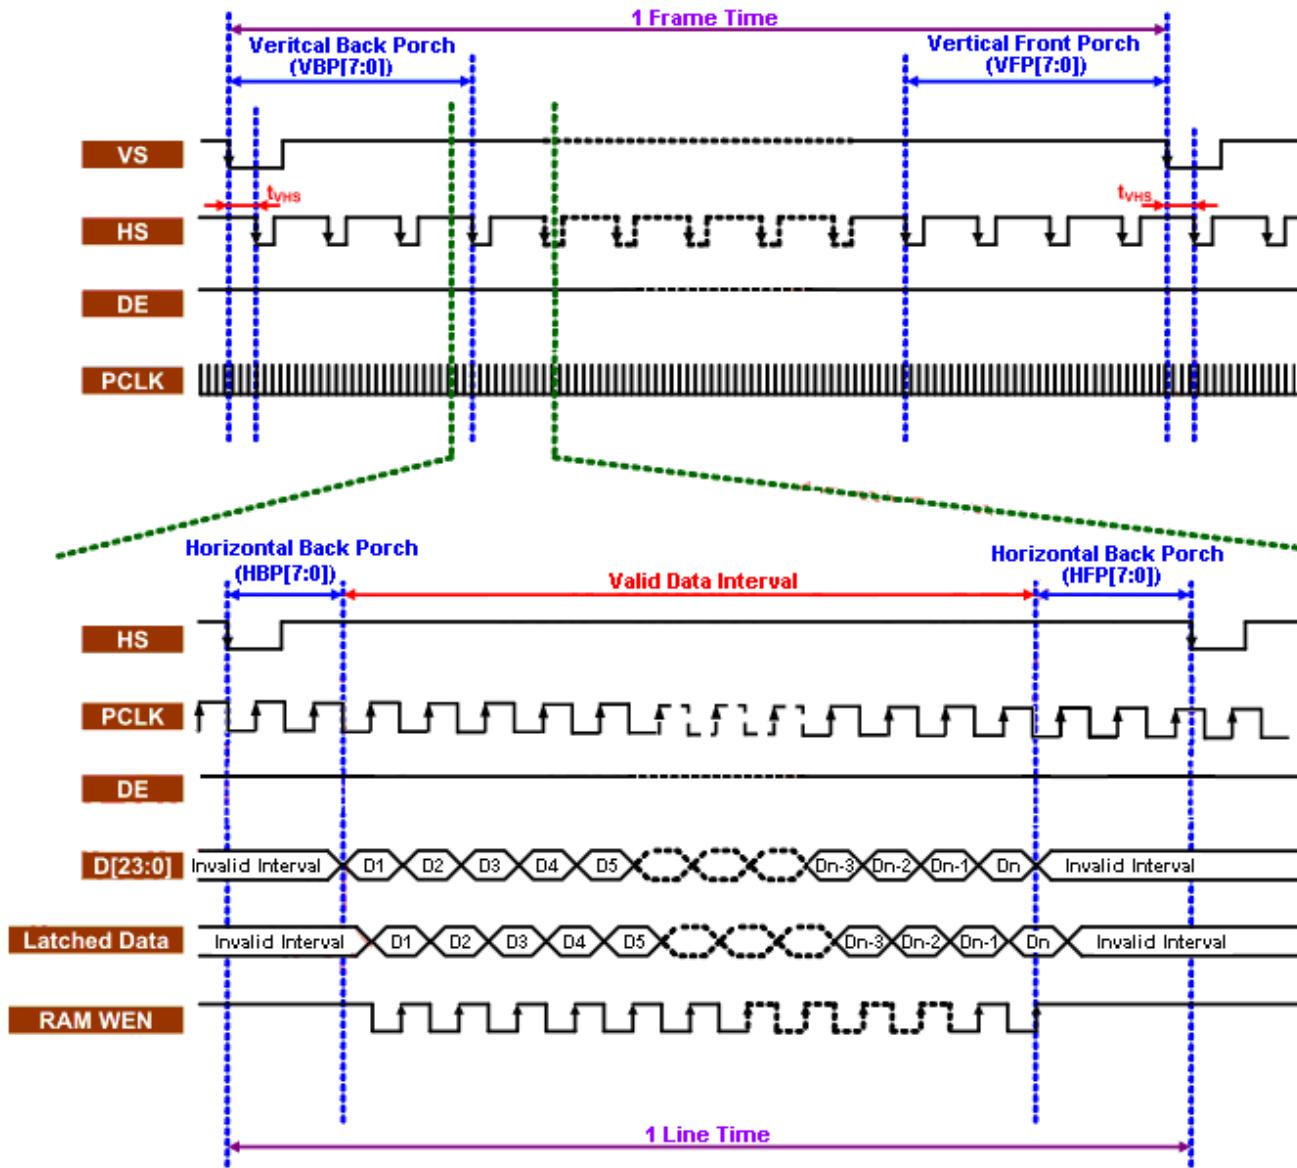

**In RGB Mode 2 :** Back porch of Vsync VBP is defined by VBP[7:0] of RGBCTR command. And back porch of Hsync HBP is defined by HBP[7:0] of RGRCTR command. Front porch of Vsync VFP is defined by VFP[7:0] of RGBCTR command. And front porch of Hsync HFP is defined by HFP[7:0] of RGBCTR command.

## 7. Reliability Test Criteria

Test Items	Required Condition			Remark
High Temperature Operation	70°C	240Hours	Operation	
Low Temperature Operation	0°C	240Hours	Operation	
High Temperature Storage	80°C	240Hours	Non-operation	
Low Temperature Storage	-10°C	240Hours	Non-operation	
High temperature and high humidity	60°C, 90% RH	240Hours	Operation	
Thermal Shock	-10°C/60 min ,80°C/60 min ,50cycles		Non-operation	
Mechanical shock	50G, 20ms, Half-sine wave, Once for each direction. ( $\pm x$ , $\pm y$ , $\pm z$ )			Non-operation
Vibration	1.5G, 10~200~10Hz, Sine wave, 30min/axis (X, Y, Z)			Non-operation
On/off	On/10 sec, off/10 sec, 30,000 cycles, 25°C			
Electrostatic discharge	Contact = $\pm 4$ kV, class B (R=330,C=150pF) Air = $\pm 8$ kV, class B (R=330,C=150pF) 1sec, 8 points, 25times/point			

**Note 1 :** Each test is done by new TFT-LCD module. Don't use the same TFT-LCD module repeatedly for reliability test.

**Note 2 :** The reliability test is performed only to examine the TFT-LCD module capability.

**Note 3 :** In the standard condition, there is not display function NG issue occurred. All cosmetic specifications are judged before the reliability stress. To inspect TFT-LCD module after reliability test, please store it at room temperature and room humidity for 24 hours at least in advance.

**Note 4 :** There should be no condensation on the surface of module during test.

**Note 5 :** Short time operation between -10°C ~ -0°C doesn't provide full performance but a correct image on the LCD. The LCD is guaranteed to suffer no permanent damage.

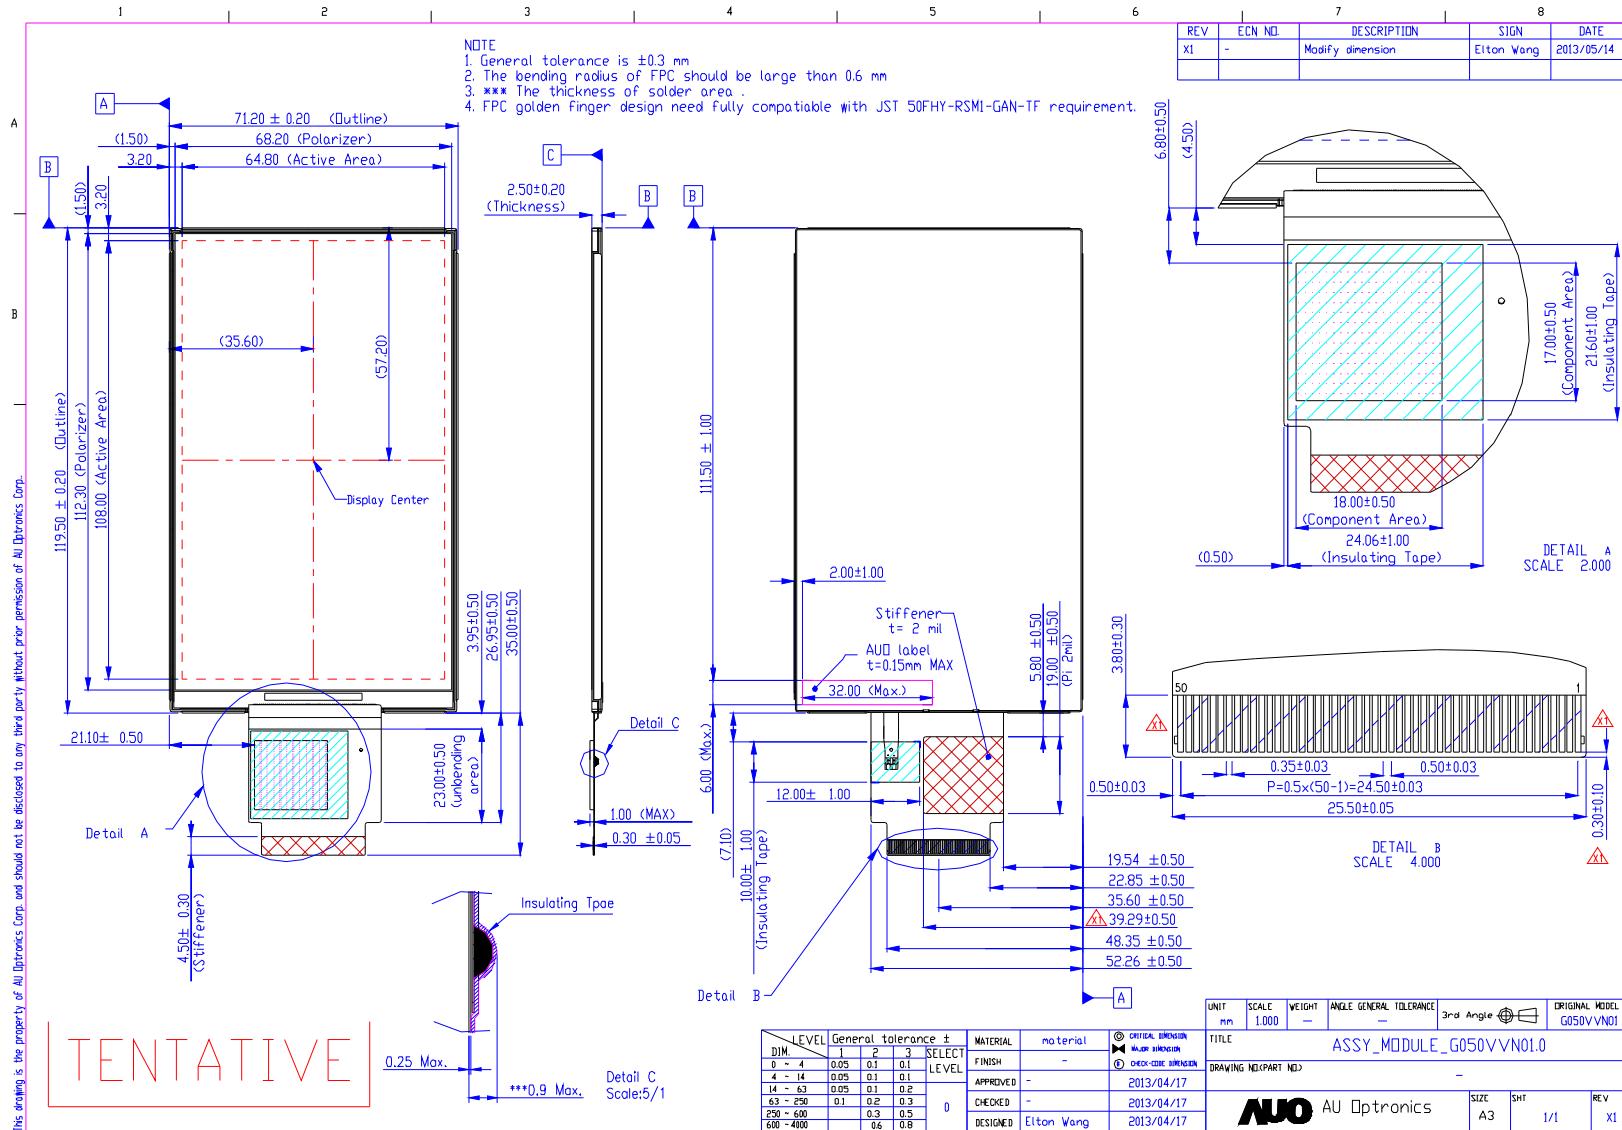

**Note 6 :** T fixture of Vibration and Shock test should be hard and rigid enough in order to protect from module twisting or bending issue.

**Note 7 :** ESD criteria is as below :

Class A	Normal operation. No degradation. No failures
Class B	Some performance degradation allowed. No data lost. Self-recoverable. No hardware failures.
Class C	Temporary performance degradation. Recovery by operator is acceptable. No hardware failures.
Class D	Hardware failures.

## 10 Safety

### 10.1 Standard

The TFT-LCD Module will be satisfied all requirements for compliance with UL 60950-1 (U.S.A. Information Technology Equipment).

#### 10.1.1 Keen Edge Requirements

There will be no keen edges or corners on the display assembly that could cause injury.

#### 10.1.2 Flammability

All components including electrical components that do not meet the flammability grade UL94-V1 in the TFT-LCD Module.

The critical components of safety will be compliance with UL 60950 requirement exception approval process.

The printed circuit board will be made from material rated 94-V1 or better. The actual UL flammability rating will be printed on the printed circuit board.

### 10.2 Capacitors

If any polarized capacitors are used in the TFT-LCD module, provisions will be made to keep them from being inserted backwards.

### 10.3 National Test Lab Requirement

The TFT-LCD Module will satisfy all requirements for compliance to UL 60950 (U.S.A. Information Technology Equipment).
