1.0   Handling Precautions

1)   Since front polarizer is easily damaged, pay attention not to scratch it.
2)   Be sure to turn off power supply when inserting or disconnecting from input connector.
3)   Wipe off water drop immediately. Long contact with water may cause discoloration or spots.
4)   When the panel surface is soiled, wipe it with absorbent cotton or other soft cloth.
5)   Since the panel is made of glass, it may break or crack if dropped or bumped on hard surface.
6)   Since CMOS LSI is used in this module, take care of static electricity and insure human earth when handling.
7)   Do not open nor modify the Module Assembly.
8)   Do not press the reflector sheet at the back of the module to any directions.
9)   In case if a Module has to be put back into the packing container slot after once it was taken out from the container, do not press the center of the CCFL Reflector edge. Instead, press at the far ends of the CFL Reflector edge softly. Otherwise the TFT Module may be damaged.
10) At the insertion or removal of the Signal Interface Connector, be sure not to rotate nor tilt the Interface Connector of the TFT Module.
11) After installation of the TFT Module into an enclosure (LCD monitor housing, for example), do not twist nor bend the TFT Module even momentary. At designing the enclosure, it should be taken into consideration that no bending/twisting forces are applied to the TFT Module from outside.   Otherwise the TFT Module may be damaged.
12) Cold cathode fluorescent lamp in LCD contains a small amount of mercury. Please follow local ordinances or regulations for disposal.
13) Small amount of materials having no flammability grade is used in the LCD module. The LCD module should be supplied by power complied with requirements of Limited Power Source(2.11, IEC60950 or UL1950), or be applied exemption.
14) The LCD module is designed so that the CFL in it is supplied by Limited Current Circuit(2.4, IEC60950 or UL1950). Do not connect the CFL in Hazardous Voltage Circuit.

Note 1: Duration=50 [msec]
Note 2: CCFL Frequency should be carefully determined to avoid interference between inverter and TFT LCD
Note 3: Calculator value for reference (ICFL×VCFL=PCFL)
Note 4: CCFL inverter should be able to give out a power that has a generating capacity of over 1300 voltage.
          Lamp units need 1300 voltage minimum for ignition
Note 5: CCFL life time 30,000hr under 8mA,it's defined as when the brightness is reduced by half.
          To exceed 8.0mA,life time accelerate drop down and if to exceed 8.5mA has safety problem.

11.0 Environment

The display module will meet the provision of this specification during operating condition or after storage or shipment condition specified below. Operation at 10% beyond the specified range will not cause physical damage to the unit.

11.1 Temperature and Humidity
11.1.1 Operating Conditions
The display module operates error free, when operated under the following conditions;

Temperature	0 ^{0}C to 50 ^{0}C
Relative Humidity	20% to 85%
Wet Bulb Temperature	39.0 ^{0}C

11.1.2 Shipping Conditions
The display module operates error free, after the following conditions;

Temperature	-20 ^{0}C to 60 ^{0}C
Relative Humidity	5% to 95%
Wet Bulb Temperature	39.0 ^{0}C

11.2 Atmospheric Pressure
The display assembly is capable of being operated without affecting its operations over the pressure range as following specified:

	Pressure	Altitude
Maximum Pressure	1040 hPa	0 m = sea level
Minimum Pressure	601 hPa	3658 m = 12,000 feet

Note: Non-operation altitude limit of this display module = 40,000 feet. = 12193 m.

11.3 Thermal Shock
The display module will not sustain damage after being subjected to 100 cycles of rapid temperature change. A cycle of rapid temperature change consists of varying the temperature from -20^{0}C to 60^{0}C, and back again.

Thermal shock cycle -20 ^{0}C for 30min
 60 ^{0}C for 30min

Power is not applied during the test. After temperature cycling, the unit is placed in normal room ambient for at least 4 hours before powering on.

12.0 Reliability

This display module and the packaging of that will comply following standards.

12.1 Failure Criteria

The display assembly will be considered as failing unit   when it no longer meets any of the requirements stated in this specification. Only as for maximum white luminance, following criteria is applicable.

- **Maximum white Luminance shall be 75 cd/m^2 or more.**

12.2 Failure Rate
