1. General Description

This specification applies to the 42.0 inch Color TFT-LCD Module T420HW07 V8. This LCD module has a TFT active matrix type liquid crystal panel 1,920x1,080 pixels, and diagonal size of 42.0 inch. This module supports 1,920x1080 mode. Each pixel is divided into Red, Green and Blue sub-pixels or dots which are arranged in vertical stripes. Gray scale or the brightness of the sub-pixel color is determined with a 8-bit gray scale signal for each dot.

The T420HW07 V8 has been designed to apply the 8-bit 2 channel LVDS interface method. It is intended to support displays where high brightness, wide viewing angle, high color saturation, and high color depth are very important.

* General Information

Items	Specification	Unit	Note
Active Screen Size	42.00	inch	
Display Area	930.24(H) x 523.26(V)	mm	
Outline Dimension	973.2(H) x 566.2 (V) x 22.5(D)	mm	D : Front bezel to D/B cover
Driver Element	a-Si TFT active matrix		
Display Colors	8 bit	Colors	
Number of Pixels	1,920x1080	Pixel	
Pixel Pitch	0.4845 x 0.4845	mm	
Pixel Arrangement	RGB vertical stripe		
Display Operation Mode	Normally Black		
Surface Treatment	Anti-Glare, 3H		Haze=2%

2. Absolute Maximum Ratings

The followings are maximum values which, if exceeded, may cause faulty operation or damage to the unit

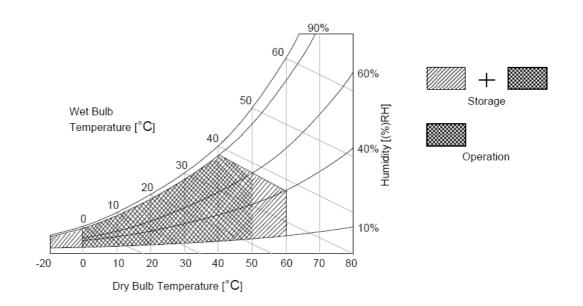

Item	Symbol	Min	Max	Unit	Conditions

Storage Humidity	HST	10	90	[%RH]	Note 2
Panel Surface Temperature	PST	-	65	[°C]	Note 3

Note 1: Duration:50 msec.

Note 2 : Maximum Wet-Bulb should be 39 $^\circ\!\mathrm{C}$ and No condensation.

The relative humidity must not exceed 90% non-condensing at temperatures of 40° C or less. At temperatures greater than 40° C, the wet bulb temperature must not exceed 39° C.

Note 3: Surface temperature is measured at 50 $^\circ\!\mathrm{C}\,$ Dry condition

3. Electrical Specification

The T420HW07 V8 requires two power inputs. One is employed to power the LCD electronics and to drive the TFT array and liquid crystal. The second is employed for LED light bar.

Note :

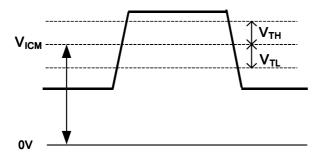

- 1. The ripple voltage should be controlled under 10% of $V_{\mbox{\tiny CC}}$
- 2. Test Condition:
 - (1) $V_{DD} = 12.0V$
 - (2) Fv = Type Timing, 60Hz, 120Hz or Other
 - (3) $F_{CLK} = Max$ freq.
 - (4) Temperature = $25 \degree C$
 - (5) Test Pattern : White Pattern

3. Measurement condition : Rising time = 400us

4. $V_{ICM} = 1.25V$

- 5. The relative humidity must not exceed 80% non-condensing at temperatures of 40°C or less. At temperatures greater than 40°C, the wet bulb temperature must not exceed 39°C. When operate at high temperatures, the brightness of LED will drop and the life time of LED will be reduced.
- **6.** The lifetime(MTTF) is defined as the time which luminance of the LED is 50% compared to its original value.

[Operating condition: Continuous operating at Ta = $25\pm2^{\circ}$ C]

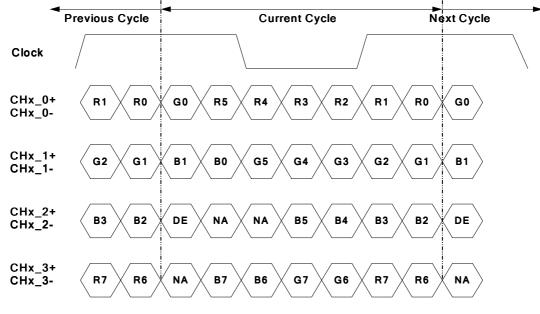

3.2 Interface Connections

- LCD connector: 187059-51221 (P-TWO, LVDS connector)
- Mating connector:

3.3 Signal Timing Specification

This is the signal timing required at the input of the user connector. All of the interface signal timing should be satisfied with the following specifications for its proper operation.

Timing Table

Signal	Item	Symbol	Min.	Тур.	Max	Unit	
	Period	Τv	1090	1125	1480	Th	
Vertical Section	Active	Tdisp (v)		1080			
	Blanking	Tblk (v)	10	45	400	Th	
	Period	Th	1030	1100	1325	Tclk	
Horizontal Section	Active	Tdisp (h)		Tclk			
	Blanking	Tblk (h)	70	140	365	Tclk	
Clock	Frequency	Fclk=1/Tclk	50	74.25	82	MHz	
Vertical Frequency	Frequency	Fv	47	60	63	Hz	
Horizontal Frequency	Frequency	Fh	60	67.5	73	KHz	

Notes:

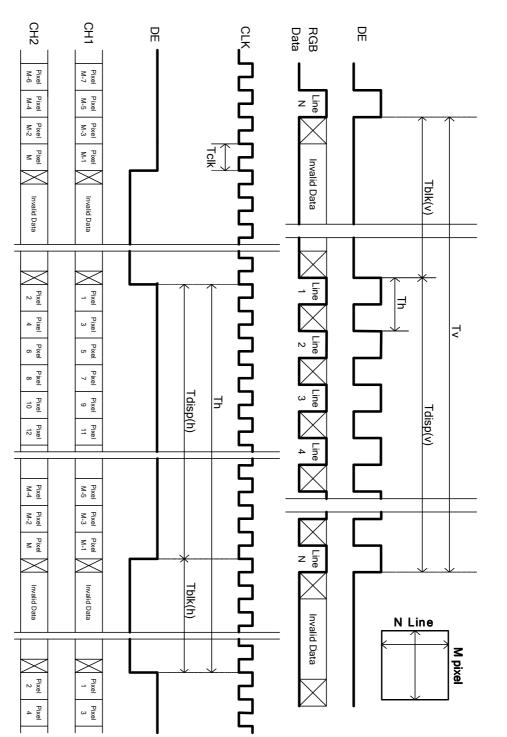

(1) Display position is specific by the rise of DE signal only.

Horizontal display position is specified by the rising edge of 1st DCLK after the rise of 1st DE, is displayed on the left edge of the screen.

- (2)Vertical display position is specified by the rise of DE after a "Low" level period equivalent to eight times of horizontal period. The 1st data corresponding to one horizontal line after the rise of 1st DE is displayed at the top line of screen.
- (3) If a period of DE "High" is less than 1920 DCLK or less than 1080 lines, the rest of the screen displays black.
- (4)The display position does not fit to the screen if a period of DE "High" and the effective data period do not synchronize with each other.

3.4 Signal Timing Waveforms

3.5 Color Input Data Reference

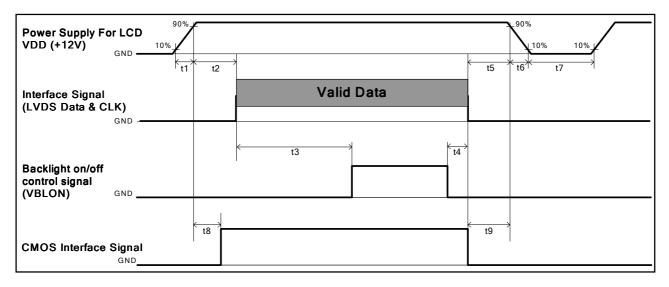

The brightness of each primary color (red, green and blue) is based on the 8 bit gray scale data input for the color; the higher the binary input, the brighter the color. The table below provides a reference for color versus data input.

Note 1 : Dimming ratio= 100% (MAX) (Ta=25±5°C, Turn on for 45minutes)

Note 2: Measurement condition Rising time = 20ms (VDDB : 10%~90%);

Note 3: When BLU off (VDDB = 24V , VBLON = 0V) , IDDB (max) = 0.02A

Note 4: V_DIM voltage of 100% duty ratio =3.1V~3.3V means Burst Mode entry point should be located between 3.1V and 3.3V.

Note 5: Less than 5% dimming control is functional well and no backlight shutdown happened

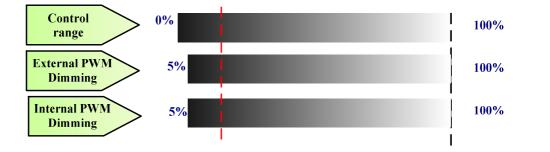

Note 6: Normal : 0~0.8V ; Abnormal : Open collector

4. Optical Specification

Optical characteristics are determined after the unit has been 'ON' and stable for approximately 45 minutes in a dark environment at 25 °C. The values specified are at an approximate distance 50cm from the LCD surface at a viewing angle of φ and θ equal to 0 °.

Fig.1 presents additional information concerning the measurement equipment and method.

y axis, down (φ=270°)	θ _d		89		degree	

Note:

1. Contrast Ratio (CR) is defined mathematically as:

Surface Luminance of Lon5

Contrast Ratio= Surface Luminance of Loff5

- 2. Surface luminance is luminance value at point 5 across the LCD surface 50cm from the surface with all pixels displaying white. From more information see FIG 2.
- 3. The variation in surface luminance, δ WHITE is defined (center of Screen) as:

 $\delta_{\text{WHITE(9P)}} = \text{Maximum}(L_{\text{on1}}, L_{\text{on2}}, \dots, L_{\text{on9}}) / \text{Minimum}(L_{\text{on1}}, L_{\text{on2}}, \dots, L_{\text{on9}})$

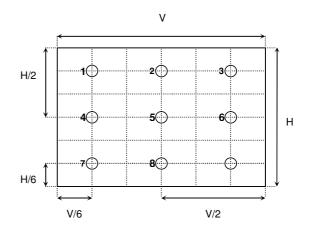

4. Response time T γ is the average time required for display transition by switching the input signal for five luminance ratio (0%,25%,50%,75%,100% brightness matrix) and is based on F_v=60Hz to optimize.

Measured		Target					
Response Time		0%	25%	50%	75%	100%	
	0%		0% to 25%	0% to 50%	0% to 75%	0% to 100%	
	25%	25% to 0%		25% to 50%	25% to 75%	25% to 100%	
Start	50%	50% to 0%	50% to 25%		50% to 75%	50% to 100%	
	75%	75% to 0%	75% to 25%	75% to 50%		75% to 100%	
	100%	100% to 0%	100% to 25%	100% to 50%	100% to 75%		

5. Viewing angle is the angle at which the contrast ratio is greater than 10. The angles are determined for the horizontal or x axis and the vertical or y axis with respect to the z axis which is normal to the LCD surface. For more information see FIG3.

8. Packing

8-1 DEFINITION OF LABEL:

A. Panel Label:

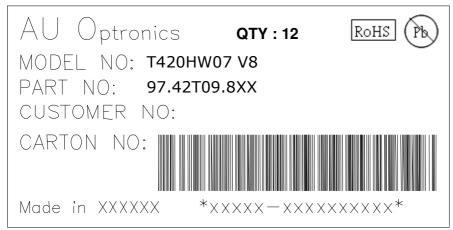

Green mark description

(1) For Pb Free Product, AUO will add (Pb) for identification.

(2) For RoHs compatible products, AUO will add RoHS for identification.

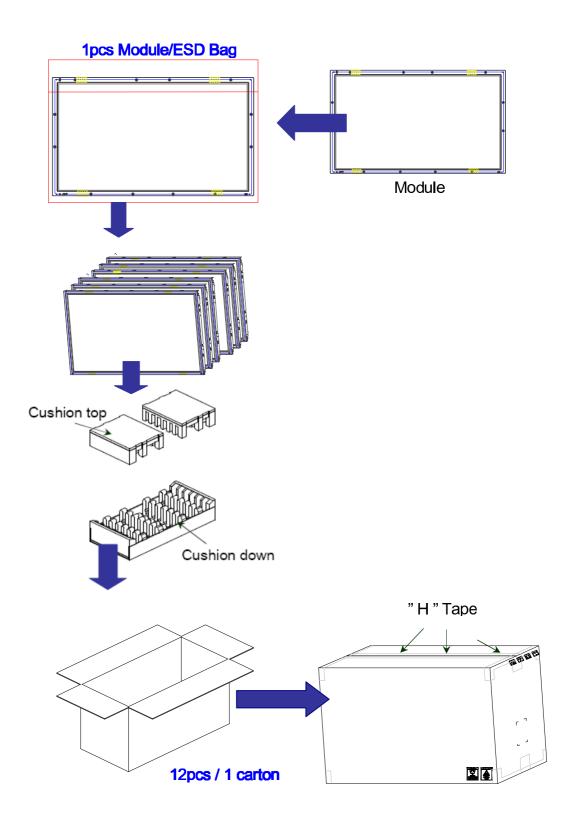

Note: The green Mark will be present only when the green documents have been ready by AUO internal green team. (definition of green design follows the AUO green design checklist.)

7. PRECAUTIONS

Please pay attention to the followings when you use this TFT LCD module.

9-1 MOUNTING PRECAUTIONS

- (1) You must mount a module using holes arranged in four corners or four sides.
- (2) You should consider the mounting structure so that uneven force (ex. twisted stress) is not applied to module. And the case on which a module is mounted should have sufficient strength so that external force is not transmitted directly to the module.
- (3) Please attach the surface transparent protective plate to the surface in order to protect the polarizer. Transparent protective plate should have sufficient strength in order to the resist external force.
- (4) You should adopt radiation structure to satisfy the temperature specification.
- (5) Acetic acid type and chlorine type materials for the cover case are not desirable because the former generates corrosive gas of attacking the polarizer at high temperature and the latter cause circuit broken by electro-chemical reaction.
- (6) Do not touch, push or rub the exposed polarizer with glass, tweezers or anything harder than HB pencil lead. And please do not rub with dust clothes with chemical treatment. Do not touch the surface of polarizer for bare hand or greasy cloth. (Some cosmetics are detrimental to the polarizer.)
- (7) When the surface becomes dusty, please wipe gently with absorbent cotton or other soft materials like chamois soaks with petroleum benzene. Normal-hexane is recommended for cleaning the adhesives used to attach front/ rear polarizer. Do not use acetone, toluene and alcohol because they cause chemical damage to the polarizer.
- (8) Wipe off saliva or water drops as soon as possible. Their long time contact with polarizer causes deformations and color fading.
- (9) Do not open the case because inside circuits do not have sufficient strength.

9-2 OPERATING PRECAUTIONS

- (1) The device listed in the product specification sheets was designed and manufactured for TV application
- (2) The spike noise causes the mis-operation of circuits. It should be lower than following voltage: V=±200mV(Over and under shoot voltage)
- (3) Response time depends on the temperature. (In lower temperature, it becomes longer..)
- (4) Brightness of CCFL depends on the temperature. (In lower temperature, it becomes lower.) And in lower temperature, response time (required time that brightness is stable after turned on) becomes longer.
- (5) Be careful for condensation at sudden temperature change. Condensation makes damage to polarizer or electrical contacted parts. And after fading condensation, smear or spot will occur.
- (6) When fixed patterns are displayed for a long time, remnant image is likely to occur.
- (7) Module has high frequency circuits. Sufficient suppression to the electromagnetic interference shall

be done by system manufacturers. Grounding and shielding methods may be important to minimize the interface.

9-3 ELECTROSTATIC DISCHARGE CONTROL

Since a module is composed of electronic circuits, it is not strong to electrostatic discharge. Make certain that treatment persons are connected to ground through wristband etc. And don't touch interface pin directly.

9-4 PRECAUTIONS FOR STRONG LIGHT EXPOSURE

Strong light exposure causes degradation of polarizer and color filter.

9-5 STORAGE

When storing modules as spares for a long time, the following precautions are necessary.

- (1) Store them in a dark place. Do not expose the module to sunlight or fluorescent light. Keep the temperature between 5° C and 35° C at normal humidity.
- (2) The polarizer surface should not come in contact with any other object. It is recommended that they be stored in the container in which they were shipped.

9-6 HANDLING PRECAUTIONS FOR PROTECTION FILM

- (1) The protection film is attached to the bezel with a small masking tape. When the protection film is peeled off, static electricity is generated between the film and polarizer. This should be peeled off slowly and carefully by people who are electrically grounded and with well ion-blown equipment or in such a condition, etc.
- (2) When the module with protection film attached is stored for a long time, sometimes there remains a very small amount of glue still on the bezel after the protection film is peeled off.
- (3) You can remove the glue easily. When the glue remains on the bezel or its vestige is recognized, please wipe them off with absorbent cotton waste or other soft material like chamois soaked with normal-hexane.
