## 1. General Description

This specification applies to the 46 inch Color TFT-LCD Module T460HW02 V2. This LCD module has a TFT active matrix type liquid crystal panel 1920x1080 pixels, and diagonal size of 46 inch. This module supports Full HD mode (Non-interlace).

Each pixel is divided into Red, Green and Blue sub-pixels or dots which are arranged in vertical stripes. Gray scale or the brightness of the sub-pixel color is determined with a 8-bit gray scale signal for each dot.

The T460HW02 V2 has been designed to apply the 8-bit 2-channel LVDS interface method. It is intended to support displays where high brightness, Hi Color Gamut (92% NTSC), wide viewing angle, and high color depth are very important.

The T460HW02 V2 backlight unit is using inverter-less solution (inductor type balance board), and need to be powered by integrated power system by customers.

### \* General Information

Items	Specification	Unit	Note
Active Screen Size	46	inches	Diagonal
Display Area	1018.08(H) x 572.67(V)	mm	
Outline Dimension	1083.0(H) x 627.0(V) x 56.1(D)	mm	With Balance Board
Driver Element	a-Si TFT active matrix		
Display Colors	16.7M	colors	
Color Gamut	92	%	NTSC
Number of Pixels	1920 x 1080	pixel	
Pixel Arrangement	RGB vertical stripe		
Pixel Pitch	0.53025	mm	
Display Mode	Normally Black		
Surface Treatment	AG, Haze 40%, 3H

## 2. Absolute Maximum Ratings

The followings are maximum values which, if exceeded, may cause faulty operation or damage to the unit

Item	Symbol	Min.	Max	Unit	Note
Logic/LCD Drive Voltage	$V_{DD}$	-0.3	14.0	$V_{DC}$	1
Input Voltage of Signal	$V_{IN}$	-0.3	3.6	$V_{DC}$	1
Operating Temperature	$T_{OP}$	0	+50	°C	2
Operating Humidity	$H_{OP}$	10	90	%RH	2
Storage Temperature	$T_{ST}$	-20	+60	°C	2
Storage Humidity	$H_{ST}$	10	90	%RH	2
Panel Surface Temperature	$T_{SUR}$	--	+65	°C	2
Shock (non-operation)	$\pm x, \pm y$	--	40	G	3
Shock (non-operation)	$\pm z$	--	30	G	3
Vibration (non-operation)		--	1.5	G	4

Note 1: Duration = 50ms

Note 2: Maximum Wet-Bulb should be 39°C and no condensation. The relative humidity must not exceed 90% non-condensing at temperatures of 40°C or less. At temperatures greater than 40°C, the wet bulb temperature must not exceed 39°C.

Note 3: Sine wave, 11ms, direction:  $\pm x, \pm y, \pm z$  (one time each direction)

Note 4: Wave form: random, vibration level: 1.5G RMS, Bandwidth: 10–500Hz

Duration: X, Y, Z 10min (one time each direction)

### 3. Electrical Specification

The T460HW02 requires two power inputs. One is employed to power the LCD electronics and to drive the TFT array and liquid crystal. The second input, which powers the CCFL, is typically generated by an integrate power (I/P) system.

#### 3.1 Electrical Characteristics

Parameter		Symbol	Value			Unit	Note
			Min.	Typ.	Max		
Power Supply Input Voltage		$V_{DD}$	10.8	12.0	13.2	$V_{DC}$	
Power Supply Input Current		$I_{DD}$	--	1.45	1.6	A	1

	Input Low Threshold Voltage	$V_{IL}$ (Low)	0	--	0.7	$V_{DC}$	
Backlight Power Consumption (ref.)		$P_{BL}$	--	216	--	Watt	2
Life Time			30,000	--	--	Hours	3

The performance of the Lamp in LCD panel, for example life time or brightness, is extremely influenced by the characteristics of the balance board and I/P board. All the parameters should be carefully designed as not to produce too much leakage current from high-voltage output. While design or order balance board, please make sure unwanted lighting caused by the mismatch of the lamp and balance board (no lighting, flicker, etc) never occurs. After confirmation, the LCD Panel should be operated in the same condition as installed in your instrument.

Do not attach a conducting tape to lamp connecting wire. If the lamp wire attach to conducting tape, TFT-LCD Module has a low luminance and the inverter has abnormal action, because leakage current occurs between lamp wire and conducting tape.

The relative humidity must not exceed 80% non-condensing at temperatures of 40°C or less. At temperatures greater than 40°C the wet bulb temperature must not exceed 39°C. When operate at low temperatures, the brightness of CCFL will drop and the lifetime of CCFL will be reduced.

**Note:**

1.  $V_{DD}=12.0V$ ,  $f_V=60Hz$ ,  $f_{CLK}=81.5Mhz$ , 25°C,  $V_{DD}$  duration time=470 $\mu s$ , test pattern: full white pattern
2. The backlight power consumption shown above does include loss of external power system at 25°C.  
The used lamp current is the lamp typical current  $I_L=6.5mA$ .
3. The life is determined as the time at which luminance of the lamp is 50% compared to that of initial value at the typical lamp current on condition of continuous operating at 25 $\pm 2^\circ C$ .
4.  $V_{CIM}=1.25V$

### 3.5 Color Input Data Reference

The brightness of each primary color (red, green and blue) is based on the 8 bit gray scale data input for the color; the higher the binary input, the brighter the color. The table below provides a reference for color versus data input.

Apply the lamp voltage within the LCD operating range. When the backlight turns on before the LCD operation or the LCD turns off before the backlight turns off, the display may momentarily become abnormal.

**Caution:** The above on/off sequence should be applied to avoid abnormal function in the display. In case of handling, make sure to turn off the power when you plug the cable into the input connector or pull the cable out of the connector.

## 4. Optical Specification

Optical characteristics are determined after the unit has been 'ON' and stable for approximately 60 minutes in a dark environment at 25°C. The values specified are at an approximate distance 50cm from the LCD surface at a viewing angle of  $\phi$  and  $\theta$  equal to 0°.

y axis, up(φ=90°)	θ <sub>u</sub>	--	89	--	degree	6
y axis, down (φ=270°)	θ <sub>d</sub>	--	89	--	degree	6

Note:

1. Contrast Ratio (CR) is defined mathematically as:

$$\text{Contrast Ratio (CR)} = \frac{\text{Brightness of the "white" state}}{\text{Brightness of the "black" state}}$$

2. Surface Luminance is luminance value at point 5 across the LCD surface 50cm from the surface with all pixels displaying white. For more information see Fig. 4-2. When lamp current  $I_L = 6.5\text{mA}$ ,  $L_{WH} = L_{on5}$ , where  $L_{on5}$  is the luminance with all pixels displaying white at center 5 location.

**Fig.4-2 Optical measurement point**

3. The variation in surface luminance,  $\delta_{\text{WHITE}(9P)}$  is defined under brightness of  $I_L = 6.5\text{mA}$  as:

$$\delta_{\text{WHITE}(9P)} = \text{Maximum}(L_{on1}, L_{on2}, \dots, L_{on9}) / \text{Minimum}(L_{on1}, L_{on2}, \dots, L_{on9})$$

4. Response time is the time required for the display to transition from white( $L_{255}$ ) to black( $L_0$ ) (Decay Time,  $T_f = T_{rD}$ ), and from black( $L_0$ ) to white( $L_{255}$ ) (Rise Time,  $T_r = T_{rR}$ ). For additional information see Fig. 4-3.

**Fig.4-3 Response time**

5. The response time is defined as the following figure and shall be measured by switching the input signal for 0%, 25%, 50%, 75%, 100% luminance. For additional information see Fig. 4-4.

**Fig.4-4 Response time**

6. Viewing angle is the angle at which the contrast ratio is greater than 10. The angles are determined for the horizontal (or x-axis) and the vertical (or y-axis) with respect to the z-axis which is normal to the LCD surface. For more information see Fig. 4-5.

**Fig.4-5 Viewing angle definition**

## **Pallet information**

By air cargo: (2 x 1) x 1 layers, one pallet put 2 boxes, total 12 pcs module.

Dimension: 1140 x 1180 x 820mm

By sea: (2 x 1) x 2 layers, one pallet put 2 boxes, stack 2 layers, total 24 pcs module.

Dimension: 1140 x 1180 x 1640mm

Pallet dimension: 1140 x 1180 x 123mm

## 8. Precautions

Please pay attention to the followings when you use this TFT LCD module.

### 8-1 MOUNTING PRECAUTIONS

- (1) You must mount a module using holes arranged on back side of panel or front mount bezel
- (2) You should consider the mounting structure so that uneven force (ex. Twisted stress) is not applied to module. And the case on which a module is mounted should have sufficient strength so that external force is not transmitted directly to the module.
- (3) Please attach the surface transparent protective plate to the surface in order to protect the polarizer. Transparent protective plate should have sufficient strength in order to resist external force.
- (4) You should adopt radiation structure to satisfy the temperature specification.
- (5) Acetic acid type and chlorine type materials for the cover case are not desirable because the former generates corrosive gas of attacking the polarizer at high temperature and the latter causes circuit break by electro-chemical reaction.
- (6) Do not touch, push or rub the exposed polarizers with glass, tweezers or anything harder than HB pencil lead. And please do not rub with dust clothes with chemical treatment. Do not touch the surface of polarizer for bare hand or greasy cloth. (Some cosmetics are detrimental to the polarizer.)
- (7) When the surface becomes dusty, please wipe gently with absorbent cotton or other soft materials like chamois soaks with petroleum benzene. Normal-hexane is recommended for cleaning the adhesives used to attach front/ rear polarizers. Do not use acetone, toluene and alcohol because they cause chemical damage to the polarizer.
- (8) Wipe off saliva or water drops as soon as possible. Their long time contact with polarizer causes deformations and color fading.
- (9) Do not open the case because inside circuits do not have sufficient strength.

### 8-2 OPERATING PRECAUTIONS

- (1) The spike noise causes the mis-operation of circuits. It should be lower than following voltage:  
 $V = \pm 200\text{mV}$  (Over and under shoot voltage)
- (2) Response time depends on the temperature. (In lower temperature, it becomes longer.)
- (3) Brightness depends on the temperature. (In lower temperature, it becomes lower.) And in lower temperature, response time (required time that brightness is stable after turned on) becomes longer.
- (4) Be careful for condensation at sudden temperature change. Condensation makes damage to polarizer or electrical contacted parts. And after fading condensation, smear or spot will occur.
- (5) When fixed patterns are displayed for a long time, remnant image is likely to occur.
- (6) Module has high frequency circuits. Sufficient suppression to the electromagnetic interference shall be done by system manufacturers. Grounding and shielding methods may be important to minimize the interface.

### **8-3 ELECTROSTATIC DISCHARGE CONTROL**

Since a module is composed of electronic circuits, it is not strong to electrostatic discharge. Make certain that treatment persons are connected to ground through wrist band etc. And don't touch interface pin directly.

### **8-4 PRECAUTIONS FOR STRONG LIGHT EXPOSURE**

Strong light exposure causes degradation of polarizer and color filter.

### **8-5 STORAGE**

When storing modules as spares for a long time, the following precautions are necessary.

- (1) Store them in a dark place. Do not expose the module to sunlight or fluorescent light. Keep the temperature between 5°C and 35°C at normal humidity.
- (2) The polarizer surface should not come in contact with any other object. It is recommended that they be stored in the container in which they were shipped.

### **8-6 HANDLING PRECAUTIONS FOR PROTECTION FILM**

- (1) The protection film is attached to the bezel with a small masking tape. When the protection film is peeled off, static electricity is generated between the film and polarizer. This should be peeled off slowly and carefully by people who are electrically grounded and with well ion-blown equipment or in such a condition, etc.
- (2) When the module with protection film attached is stored for a long time, sometimes there remains a very small amount of glue still on the Bezel after the protection film is peeled off.
- (3) You can remove the glue easily. When the glue remains on the Bezel or its vestige is recognized, please wipe them off with absorbent cotton waste or other soft material like chamois soaked with normal-hexane.

## 9. Reliability

Environment test condition

No	Test Item	Condition
1	High Temperature Storage Test	Ta = 60°C, 300Hr Judge
2	Low Temperature Storage Test	Ta = -20°C, 300Hr Judge
3	High Temperature / High Humidity Operation Test	Ta = 50°C, 80%RH, 300Hr Judge
4	Low Temperature Operation Test	Ta = -5°C , 300Hr Judge
5	Heat Shock	-40°C → +60°C / 45min. → -40°C / 45min. 200 cycles Temperature transition time must be < 5min.
6	Vibration Test (non-operating)	Waveform: random Vibration Level: 1.5G RMS Bandwidth: 10-500Hz Duration: X, Y, Z 10min one time each direction
7	Shock Test (non-operating)	Shock Level: 50G Waveform: have sine wave, 11ms Direction: ±X, ±Y, ±Z one time each direction Time Cycle No.: once for each time
8	Vibration Test (with carton)	Waveform: random Vibration Level: 0.83G RMS Bandwidth: 10-200Hz Duration: 30min in each X, Y, Z direction
9	Drop Test (with carton)	Height: 31cm 1 corner, 3 edges, 6 surfaces (ASTMD4169-I)
