**1.0 GENERAL DESCRIPTION**

1.1 Introduction

HT07W12-120 is a color active matrix TFT-LCD unit using amorphous silicon TFT's (Thin Film Transistors) as active switching devices. This unit has a 7 inch (18cm) diagonally (Aspect ratio 16:9) measured active area with resolutions (480 horizontal by 234 vertical pixel array). Each pixel is divided into RED, GREEN, BLUE dots, which are arranged in vertical stripe and this unit can display full colors.

1.2 Features

- Slim, light weight and compact
- Wide view angle and high contrast ratio
- Compatible with NTSC and PAL system
- High brightness
- Image reversion: Up/Down and Left/Right
- Multi Video display mode

1.3 Application

- CAR TV & Portable TV

**4.0 OPTICAL SPECIFICATIONS**

4.1 Overview

The test of Optical specifications shall be measured in a dark room (ambient luminance  $\leq 1$  lux and temperature =  $25 \pm 2^\circ\text{C}$ ) with the equipment of Luminance meter system (Goniometer system and TOPCON BM-5) and test unit shall be located at an approximate distance 50cm from the LCD surface at a viewing angle of  $\theta$  and  $\phi$  equal to  $0^\circ$ . We refer to  $\theta_{\phi=0}$  ( $=\theta_3$ ) as the 3 o'clock direction (the "right"),  $\theta_{\phi=90}$  ( $=\theta_{12}$ ) as the 12 o'clock direction ("upward"),  $\theta_{\phi=180}$  ( $=\theta_9$ ) as the 9 o'clock direction ("left") and  $\theta_{\phi=270}$  ( $=\theta_6$ ) as the 6 o'clock direction ("bottom"). While scanning  $\theta$  and/or  $\phi$ , the center of the measuring spot on the display surface shall stay fixed. The measurement shall be executed 30 minutes after lighting at rating with the back-light CCFL being run at a 4.0 mA current after 30 minutes warm-up period. Vdd shall be  $5.00 \pm 0.2\text{V}$  at  $25^\circ\text{C}$ . Optimum viewing angle direction is 6 o'clock. The test setup, geometry, and measurement location are shown in FIGURE 2. and FIGURE 3. (shown in Appendix)

	$T_d$		-	25	50		

Note

1. Viewing angle is the angle at which the contrast ratio is greater than 5. The viewing angles are determined for the horizontal or 3, 6 o'clock direction and the vertical or 6, 12 o'clock direction with respect to the optical axis which is normal to the LCD surface (see FIGURE 1 shown in Appendix)

2. Average luminance of white is defined as arithmetic mean of one point across the LCD surface. Luminance shall be measured with all pixels in the view field set first to white. This measurement shall be taken at the locations shown in FIGURE 2 for a total of the measurements per display.
3. The color chromaticity coordinates specified in Table 5. shall be calculated from the spectral data measured with all pixels first in red, green, blue, and white measurements shall be made at the center of the panel.
4. Contrast measurements shall be made at viewing angle of  $\theta = 0^\circ$  and at the center of the LCD surface. See FIGURE 1 (located in Appendix). Luminance shall be measured with all pixels in the view field set first to white, then to the dark (black) state. Luminance Contrast Ratio (CR) is defined mathematically as :  $CR = \text{Luminance when displaying a white raster} / \text{Luminance when displaying a black raster}$ .
5. The white luminance uniformity on LCD surface is then expressed as :  $\Delta Y = \text{Maximum luminance of five points} / \text{Minimum luminance of five points}$ .
6. The electro-optical response time measurements shall be made as shown in FIGURE 3 (shown in Appendix) by switching the "data" input signal ON and OFF. The times needed for the luminance to change from 10% to 90% is  $T_d$  and 90% to 10% is  $T_r$ .

7	Vibration test	Frequency : 10 ~ 55Hz Amplitude : 1.5mm Sweep : 11mins 6Cycles for each direction of X, Y, Z
8	Shock Test	100G, 6ms, Direction: ±X, ±Y, ±Z 2Times
9	Endurance of atmospheric pressure	0.5AT, 2hrs

**10.0 HANDLING & CAUTIONS**

(1) Cautions for handling the module

- As the electrostatic discharges may break the LCD module, handle the LCD module with care. Peel a protection sheet off from the LCD panel surface as slowly as possible.
- As the LCD panel and back-light element are made from fragile glass material, impulse and pressure to the LCD module should be avoided.
- As the surface of the polarizer is very soft and easily scratched, use a soft dry cloth without chemicals for cleaning.
- Do not pull the interface connector in or out while the LCD module is operating.
- Handle connectors and cables with care.

(2) Other cautions

- Do not disassemble and/or re-assemble LCD module.
- When returning the module for repair or etc., Please pack the module not to be broken. We recommend using the original shipping packages.
