## 1.0 GENERAL DESCRIPTION

### 1.0.1 Introduction

HM150X01-N01 is a color active matrix TFT LCD module using amorphous silicon TFT's (Thin Film Transistors) as an active switching devices. This module has a 15.0 inch diagonally measured active area with XGA resolutions (1024 horizontal by 768 vertical pixel array). Each pixel is divided into RED, GREEN, BLUE dots which are arranged in vertical stripe and this module can display 16.2M colors. The TFT-LCD panel used for this module is adapted for a low reflection and higher color type.

### 1.0.2 Features

- LED back-light
- LED light bar replaceable
- LVDS interface
- RoHS Compliant

### 1.0.3 Application

- TFT-LCD Monitor
- Reliability Application

## 1.0.4 General Specification

Power supply Current for Back light		I <sub>LED</sub>	-	180	-	mA	
Power supply for Back light		P <sub>LED</sub>	4.7	5.1	5.4	W	Note 1
EN Control Level	Backlight on	V <sub>ENH</sub>	2	-	-	V	EN logic high voltage
	Backlight off	V <sub>ENL</sub>	-	-	0.6	V	EN logic low voltage
PWM Control Level	PWM High Level	V <sub>PML</sub>	2	-	-	V	
	PWM Low Level	V <sub>PML</sub>	-	-	0.6	V	
PWM Control Frequency		F <sub>PWM</sub>	0.12	-	1	KHz	
Duty Ratio		-	5	-	100	%	

Notes : 1. Calculator Value for reference  $I_{LED} \times V_{LED} = P_{LED}$

2. The LED Life-time define as the estimated time to 50% degradation of initial luminous under the condition of the ambient temperature of 25°C.

## 4.0 OPTICAL SPECIFICATION

### 4.0.1 Overview

The test of view angle range shall be measured in a dark room (ambient luminance  $\leq 1$ lux and temperature =  $25 \pm 2^\circ\text{C}$ ) with the equipment of Luminance meter system (Goniometer system and TOPCON CS2000/CA310) and test unit shall be located at an approximate distance 50cm from the LCD surface at a viewing angle of  $\theta$  and  $\Phi$  equal to  $0^\circ$ . We refer to  $\theta \Phi = 0$  ( $= \theta 3$ ) as the 3 o'clock direction (the "right"),  $\theta \Phi = 90$  ( $= \theta 12$ ) as the 12 o'clock direction ("upward"),  $\theta \Phi = 180$  ( $= \theta 9$ ) as the 9 o'clock direction ("left") and  $\theta \Phi = 270$  ( $= \theta 6$ ) as the 6 o'clock direction ("bottom"). While scanning  $\theta$  and/or  $\Phi$ , the center of the measuring spot on the Display surface shall stay fixed. The luminance, color and uniformity (etc) should be tested by CS2000/CA310. The backlight should be operating for 10 minutes prior to measurement. VDD shall be  $3.3 \pm 0.3\text{V}$  at  $25^\circ\text{C}$ . Optimum viewing angle direction is 6 'clock

<Table 5. Optical Specifications>

Parameter		Symbol	Condition	Min.	Typ.	Max.	Unit	Remark
Viewing Angle range	Horizontal	$\Theta_3$	CR > 10	-	80	-	Deg.	Note 1
		$\Theta_9$		-	80	-	Deg.	
	Vertical	$\Theta_{12}$		-	80	-	Deg.	
		$\Theta_6$		-	80	-	Deg.	
Luminance Contrast ratio		CR	$\Theta = 0^\circ$	400	700	-		Note 2
Luminance of White	Center	$Y_w$	$\Theta = 0^\circ$	280	350	-	cd/m <sup>2</sup>	Note 3
White Luminance uniformity	9 Points	$\Delta Y9$		75	80	-	% $\downarrow$	Note 4
Reproduction of color	White	$W_x$	$\Theta = 0^\circ$	Typ -0.03	0.313	Typ +0.03		Note 5
		$W_y$			0.329			
Response Time		$T_{RT}$	Ta= $25^\circ\text{C}$ $\Theta = 0^\circ$	-	8	12	ms	Note 6
Cross Talk		CT	$\Theta = 0^\circ$	-	-	2.0	%	Note 7

Notes : 1. Viewing angle is the angle at which the contrast ratio is greater than 10. The viewing angles are determined for the horizontal or 3, 9 o'clock direction and the vertical or 6, 12 o'clock direction with respect to the optical axis which is normal to the LCD surface (see FIGURE 1).

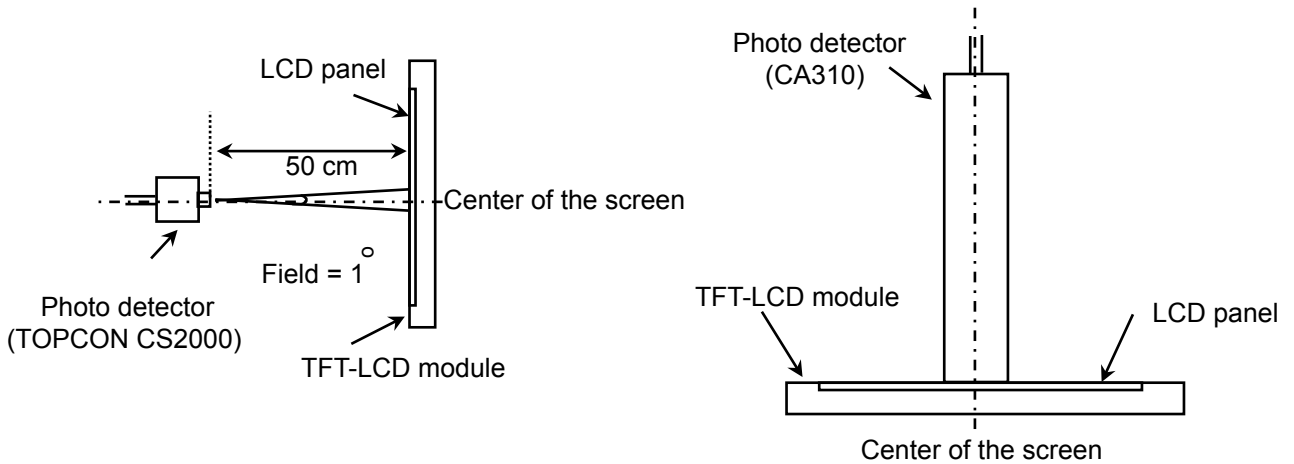

2. Contrast measurements shall be made at viewing angle of  $\Theta = 0$  and at the center of the LCD surface. Luminance shall be measured with all pixels in the view field set first to white, then to the dark (black) state. (see FIGURE 1) Luminance Contrast Ratio (CR) is defined mathematically.

$$CR = \frac{\text{Luminance when displaying a white raster}}{\text{Luminance when displaying a black raster}}$$

3. Luminance of white is defined as luminance values of center of the LCD surface. Luminance shall be measured with all pixels in the view field set first to white. This measurement shall be taken at the locations shown in FIGURE 2 for a total of the measurements per display. The luminance is measured by CS2000/CA310 when the LED current is set at 60mA.
4. The White luminance uniformity on LCD surface is then expressed as :  $\Delta Y = \text{Minimum Luminance of 9 points} / \text{Maximum Luminance of 9 points}$  (see FIGURE 2).
5. The color chromaticity coordinates specified in Table 5. shall be calculated from the spectral data measured with all pixels first in red, green, blue and white. Measurements shall be made at the center of the panel.
6. The electro-optical response time measurements shall be made as FIGURE 3 by switching the "data" input signal ON and OFF. The times needed for the luminance to change from 10% to 90% is  $T_r$ , and 90% to 10% is  $T_d$ .
7. Cross-Talk of one area of the LCD surface by another shall be measured by comparing the luminance ( $Y_A$ ) of a 25mm diameter area, with all display pixels set to a gray level, to the luminance ( $Y_B$ ) of that same area when any adjacent area is driven dark. (See FIGURE 4).

### 4.0.2 Optical measurements

**Figure 1. Measurement Set Up**

View angel range, uniformity, etc. measurement setup    Flicker, measurement setup

**Figure 2. White Luminance and Uniformity Measurement Locations (9 points)**

Luminance of white is defined as luminance values of center of the LCD surface. Luminance shall be measured with all pixels in the view field set first to white. This measurement shall be taken at the locations shown in FIGURE 2 for a total of the measurements per display.

The White luminance uniformity on LCD surface is then expressed as :  $\Delta Y9 = \text{Minimum Luminance of 9 points} / \text{Maximum Luminance of 9points}$  (see FIGURE 2).

**Figure 3. Response Time Testing**

The electro-optical response time measurements shall be made as shown in FIGURE 3 by switching the “data” input signal ON and OFF. The times needed for the luminance to change from 10% to 90% is  $T_r$  and 90% to 10% is  $T_d$ .

**Figure 4. Cross Modulation Test Description**

$$\text{White Bar Cross-Talk(\%)} = \left| \frac{Y_B - Y_A}{Y_A} \right| \times 100$$

$$\text{Black Bar Cross-Talk(\%)} = \left| \frac{Y_C - Y_A}{Y_A} \right| \times 100$$

Where:

YA = Initial luminance of measured area (cd/m<sup>2</sup>)

YB = Subsequent luminance of measured area (cd/m<sup>2</sup>) @White Bar

YC = Subsequent luminance of measured area (cd/m<sup>2</sup>) @Black Bar

The location measured will be exactly the same in both patterns.♪

## 5.0 INTERFACE CONNECTION.

### 5.0.1 Electrical Interface Connection

The electronics interface connector is DF14H-20P-1.25H.

The LED connector is 3808K-F05N-03L

The connector interface pin assignments are listed in Table 6 and 7.

<Table 6. Pin Assignments for the Interface Connector>

## 10.0 HANDLING & CAUTIONS

### (1) Cautions when taking out the module

- Pick the pouch only, when taking out module from a shipping package.

### (2) Cautions for handling the module

- As the electrostatic discharges may break the LCD module, handle the LCD module with care. Peel a protection sheet off from the LCD panel surface as slowly as possible.
- As the LCD panel and back - light element are made from fragile glass material, impulse and pressure to the LCD module should be avoided.
- As the surface of the polarizer is very soft and easily scratched, use a soft dry cloth without chemicals for cleaning.
- Do not pull the interface connector in or out while the LCD module is operating.
- Put the module display side down on a flat horizontal plane.
- Handle connectors and cables with care.

### (3) Cautions for the operation

- When the module is operating, do not lose CLK, ENAB signals. If any one of these signals is lost, the LCD panel would be damaged.
- Obey the supply voltage sequence. If wrong sequence is applied, the module would be damaged.

### (4) Cautions for the atmosphere

- Dew drop atmosphere should be avoided.
- Do not store and/or operate the LCD module in a high temperature and/or humidity atmosphere. Storage in an electro-conductive polymer packing pouch and under relatively low temperature atmosphere is recommended.

### (5) Cautions for the module characteristics

- Do not apply fixed pattern data signal to the LCD module at product aging.
- Applying fixed pattern for a long time may cause image sticking.

### (6) Other cautions

- Do not disassemble and/or re-assemble LCD module.
- Do not re-adjust variable resistor or switch etc.
- When returning the module for repair or etc., Please pack the module not to be broken. We recommend to use the original shipping packages.
