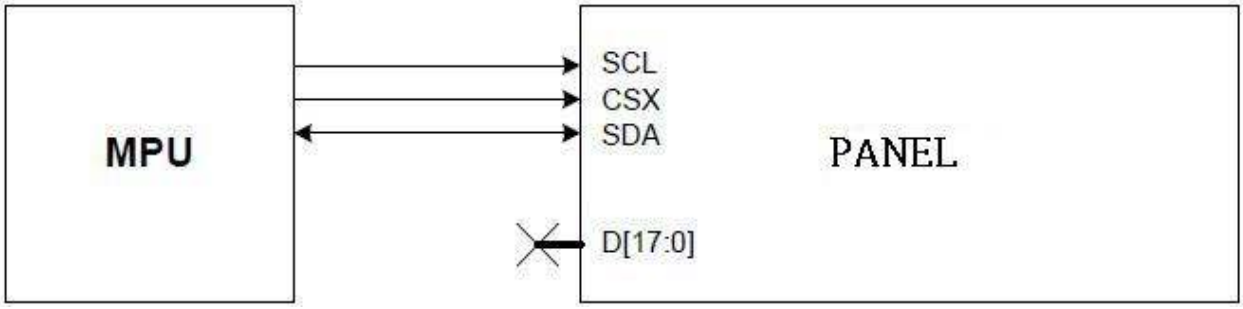
11.Interface Timing

11-1) Serial Interface Mode

11-1-1) Block Diagram

The serial bus interface can be used by setting external pin as IM [3:0] to "0101"**.**The figure in the following is the example of interface with microcomputer system interface.



11-1-2) Data Format

The serial data packet contains a data/command select bit (D/CX) and a transmission byte. If D/CX is "low", the transmission byte is interpreted as a command byte. If D/CX is "high", the transmission byte is stored in the display data RAM (Memory write command), or command register as parameter.

11-2-1) Block Diagram

The 8080-system 16-bit parallel bus interface can be used by setting external pin as IM [3:0] to "0010".The figure in the following is the example of interface with microcomputer system interface.

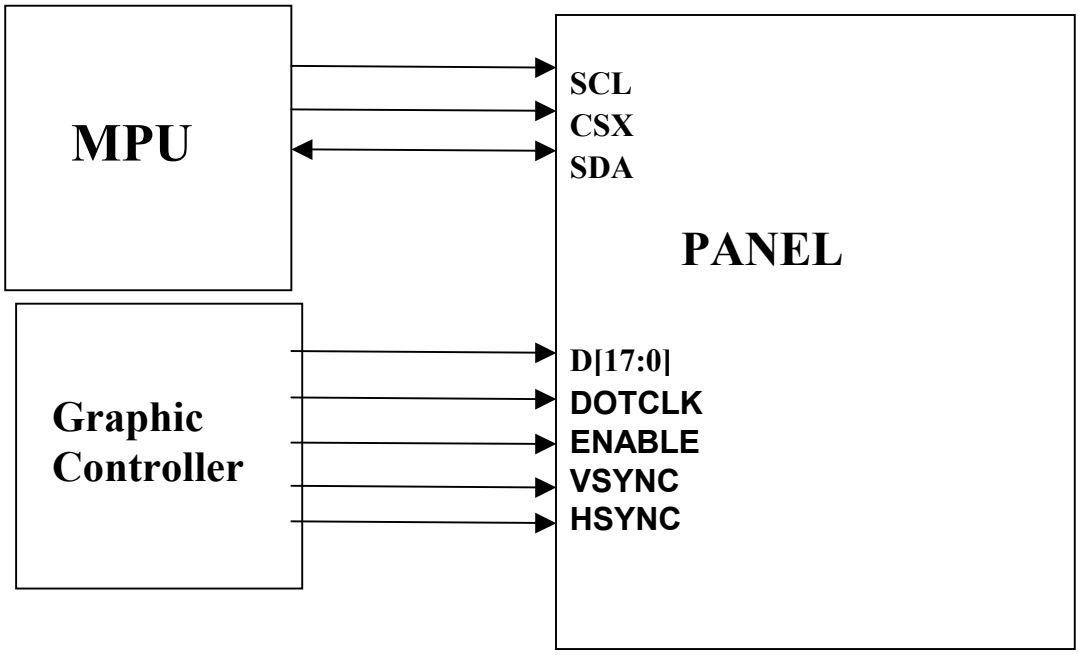
11-3) RGB Interface Mode

11-3-1) Block Diagram

This mode is operated with VSYNC, HSYNC, ENABLE, DOTCLK, DB[17:0] lines. The mode can be used by setting external pin as IM [3:0] to "0101". The figure in the following is the example of interface with microcomputer system interface.

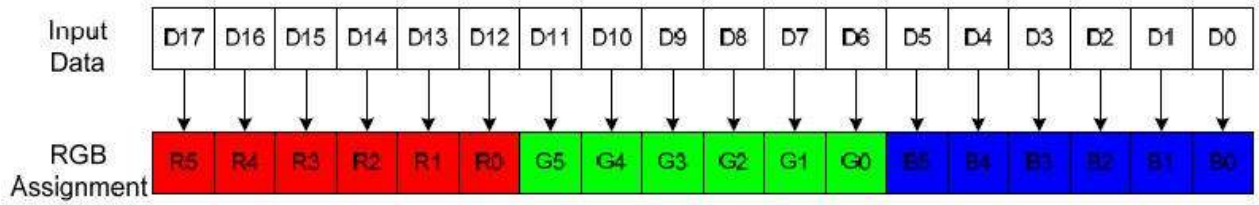


11-3-2) RGB Interface Selection

The panel supports several pixel format that can be selected by DPI [2:0] bits in "Pixel Format Set (3Ah)"command. The selection of a given interfaces are done by DPI [2:0] as show in the following table.

DPI[2:0]			RGB Interface Mode	Used Pins
1	0	1	16-bit RGB interface	VSYNC, HSYNC, ENABLE, DB[15:0]
1	1	0	18-bit RGB interface	VSYNC, HSYNC, ENABLE, DB[17:0]
Other			Setting prohibited	

The 18-bit RGB interface is selected by setting the DPI[2:0] bits to "110". The display operation is synchronized with VSYNC, HSYNC and DOTCLK signals. The display data are transferred to the internal GRAM in synchronization with the display operation via 18-bit RGB data bus (DB[17:0]) according to the data enable signal (ENABLE).



11-3-3) Timing Characteristics

14. Handling Cautions

14-1) Mounting of module

a) Please power off the module when you connect the input/output connector.
b) Polarizer which is made of soft material and susceptible to flaw must be handled carefully.
c) Protective film (Laminator) is applied on surface to protect it against scratches and dirt. It is recommended to peel off the laminator before use and taking care of static electricity.
d) Please following the tear off direction as figure 14-1 to remove the protective film as slowly as possible, so that electrostatic charge can be minimized.

14-2) Precautions in mounting

a) When metal part of the TFT-LCD module (shielding lid and rear case) is soiled, wipe it with soft dry cloth.
b) Wipe off water drops or finger grease immediately. Long contact with water may cause discoloration or spots.
c) TFT-LCD module uses glass which breaks or cracks easily if dropped or bumped on hard surface. Please handle with care.
d) Since CMOS LSI is used in the module. So take care of static electricity and earth yourself when handling.

14-3) Adjusting module

a) Adjusting volumes on the rear face of the module have been set optimally before shipment.
b) Therefore, do not change any adjusted values. If adjusted values are changed, the specifications described may not be satisfied.

14-4) Others

a) Do not expose the module to direct sunlight or intensive ultraviolet rays for many hours.
b) Store the module at a room temperature place.
c) The voltage of beginning electric discharge may over the normal voltage because of leakage current from approach conductor by to draw lump read lead line around.
d) If LCD panel breaks, it is possibly that the liquid crystal escapes from the panel. Avoid putting it into eyes or mouth. When liquid crystal sticks on hands, clothes or feet. Wash it out immediately with soap.
e) Observe all other precautionary requirements in handling general electronic components.
f) Please adjust the voltage of common electrode as material of attachment by 1 module.

14-5) Polarizer mark

The polarizer mark is to describe the direction of wide view angle film how to match up with the rubbing direction.
