

SPECIFICATION

For

EG4801S-AR

This specification consists of two documents as follows.

- 1. LCD Specification SC-010006500
- 2. LCD QA Standard M3-00100

Customer's Approval	
<u>Date</u> By	<u>Date</u> Feb. 4 '93 Presented by <i>Y. Katayama</i> <i>y. Tokai</i> <i>M. Nakamura</i> Y. Katayama GM QA dep. SEIKO EPSON CORP. LCD DIV. Quality assurance Dep.

1. Basic Specifications

1-1 Display Specifications

- (1) STN Mode Positive Display type Reflective Model
- (2) Display Color
 - Display Color : Display Data"1" : Dark Blue
 - Background Color : Display Data"0" : Gray
- (3) Viewing Angle : 6 O'clock direction
- (4) Driving Duty : 1/64 Duty

*1) Color tone is slightly changed by temperature and driving voltage.

1-2 Mechanical Specifications

- (1) Outline Dimensions : Refer to attached Outline Dimensions figure SD-010065-A
- (2) Dot Matrix : 512 dots × 128 dots
- (3) Dot Size : 0.43 (W) × 0.43 (H) (mm)
- (4) Dot Pitch : 0.47 (W) × 0.47 (H) (mm)
- (5) Weight : 320 g (Approx.)

4. Optical Characteristics

4-1 Optical Characteristics

f FR = 75 Hz

Item	Symbol	Temp °C	Standard Value			Unit	Condition
			MIN	TYP	MAX		
Driving Voltage	VOP	0	-	14.6	15.6	V	
		25	-	13.6	-		
		50	11.3	12.3	-		
Response Time	Tr	0	-	300	600	ms	
		25	-	100	200		
	Tf	0	-	500	1000		
		25	-	150	300		
Viewing Angle	$\theta Y1$	25	20	-	-	DEG	$K \geq 2$
	$\theta Y2$		30	-	-		
	$\theta X1$		25	-	-		
	$\theta X2$		25	-	-		
Contrast	K	25	-	3	-		

*1) Vop=LCD Driving Voltage getting maximum contrast
=VDD-VLCD

4-2 Definition of Optical Characteristics

(1) Optical Measuring Equipment

L : Lighting Source
P. M : Lighting Sensor
M : Module

[Specification of Equipments and Measuring Condition]

Luxmeter : Canon LC-3S
Brightness Measurement Spot Diameter $\phi 2\text{mm}$

Lighting Source : Halogen Lamp(Circular)

(2) Definition of Viewing Angle

SEIKO EPSON CORPORATION

Sheet
Code

42-AN000002

(3) Definition of Response Time

[Measuring Condition]

- VOP = TYP. value at Operating Temperature
- $\theta X = \theta Y = 0^\circ$

SEIKO EPSON CORPORATION

Sheet Code 43-P0000000

(4) Definition of Contrast Ratio

$$\text{Contrast Ratio} = \frac{\text{Brightness Curve with Display Data "0" input } b}{\text{Brightness Curve with Display Data "1" input } a}$$

[Measuring Condition]

- VOP = TYP. value at Operating Temperature
- $\theta X = \theta Y = 0^\circ$

5. Reliability

5-1 Content of Reliability Test

Environmental Test				
No	Test Item	Content of Test	Test Condition	Applicable standard
1	High temperature storage	Endurance test applying the high storage temperature for a long time.	60 °C 200 H	—
2	Low temperature storage	Endurance test applying the low storage temperature for a long time.	-20 °C 200 H	—
3	High temperature Operation	Endurance test applying the electric stress (Voltage & Current) and the thermal stress to the element for a long time.	50 °C 200 H	—
4	Low temperature operation	Endurance test applying the electric stress under low temperature for a long time.	0 °C 200 H	—
5	High temperature/humidity storage	Endurance test applying the high temperature and high humidity storage for a long time.	60 °C 90 %RH 96 H	MIL-202E-103B JIS-C5023
6	High temperature/humidity operation	Endurance test applying the electric stress (Voltage & Current) and temperature/humidity stress to the element for a long time.	50 °C 90 %RH 96 H	MIL-202E-103B JIS-C5023
7	Temperature cycle	Endurance test applying the low and high temperature cycle. -20°C ↔ 25°C ↔ 60°C ↔ 25°C 30min. 5min. 30min. 5min. ←—————→ 1 cycle	-20°C/60°C 10 cycle	—
Mechanical Test				
8	Vibration test	Endurance test applying the vibration during transportation and using.	10~22Hz→1.5mmp-p 22~500Hz →1.5G Total 0.5H	MIL-202E-201A JIS-C5025 JIS-C7022-A-10
9	Shock test	Constructional and mechanical endurance test applying the shock during transportation.	50G Half sign wave 11msec 3 times of each direction	MIL-202E-213B
10	Atmospheric pressure test	Endurance test applying the atmospheric pressure during transportation by air.	115 mbar 40 H	MIL-202E-105C
Others				
11	Static electricity test	Endurance test applying the electric stress to the terminal.	VS = 800 v RS = 1.5 kΩ CS = 100 PF 1 time	MIL-883B-3015.1

*1) Driving condition for operation test
 Power supply voltage for Logic system = 5V
 Power supply voltage for LCD system = Getting Optimum Contrast at 25°C

6. Package Specifications

6-1 Inner Carton Box

Each LCD module is wrapped with a antistatic pouch, and put into the inner carton box for containing 10 pcs of LCD module.

The following contents should be indicated on the inner carton box.

Type EG4801S-AR
Q'ty 10 pcs.
Lot Lot No.
EPSON SEIKO EPSON CORP.
DISPLAY DIVISION

6-2 Master Carton Box

The master carton box is for sending to each user.
 The master carton box contains 2 pcs of inner carton box.
 The indications are applied to four faces A, B, C and D of the master carton as shown Fig. 1 below.

Fig. 1 Outline of Master Carton Box

Precautions for use of LCD Modules

<Handling Precautions>

- The display panel is made of glass. Do not subject it to a mechanical shock by dropping it from a high place, etc.
- If the display panel is damaged and the liquid crystal substance inside it leaks out, be sure not to get any in your mouth. If the substance comes into contact with your skin or clothes, promptly wash it off using soap and water.
- Do not apply excessive force to the display surface or the adjoining areas since this may cause the color tone to vary.
- The polarizer covering the display surface of the LCD module is soft and easily scratched. Handle this polarizer carefully.
- If the display surface becomes contaminated, breathe on the surface and gently wipe it with a soft dry cloth. If it is heavily contaminated, moisten cloth with one of the following solvents.
 - Isopropyl alcohol
 - Ethyl alcohol

Solvents other than those mentioned above may damage the polarizer. Especially, do not use the following.

- Water
 - Ketone
 - Aromatic solvents
- Exercise care to minimize corrosion of the electrode. Corrosion of the electrodes is accelerated by water droplets, moisture condensation or a current flow in a high-humidity environment.
 - Install the LCD Module by using the mounting holes. When mounting the LCD Module make sure that it is free of twisting, warping, and distortion. In particular, do not forcibly pull or bend the I/O cable or the backlight cable.
 - Do not attempt to disassemble or process the LCD Module.
 - NC terminal should be open. Do not connect anything.
 - If the logic circuit power is off, do not apply the input signals.

SEIKO EPSON CORPORATION

Sheet
Code

B-PNMN0000-A(1)

- To prevent destruction of the elements by static electricity, be careful to maintain an optimum work environment.
 - Be sure to ground the body when handling the LCD Modules.
 - Tools required for assembly, such as soldering irons, must be properly grounded.
 - To reduce the amount of static electricity generated, do not conduct assembly and other work under dry conditions.
 - The LCD Module is coated with a film to protect the display surface. Exercise care when peeling off this protective film since static electricity may be generated.

<Storage Precautions>

- When storing the LCD Modules, avoid exposure to direct sunlight or to the light of fluorescent lamps. Keep the modules in bags designed to prevent static electricity charging under low temperature/normal humidity conditions (avoid high temperature/high humidity and low temperatures below 0 °C). Whenever possible, the LCD Modules should be stored in the same conditions in which they were shipped from our company.

<Design Precautions>

- The absolute maximum ratings represents the rated value beyond which LCD Modules cannot exceed. When the LCD Modules are used in excess of this rated value, their operating characteristics may be adversely affected.
- To prevent the occurrence of erroneous operation caused by noise, attention must be paid to satisfy VIL, VIH, and the other specification values, including taking the precaution of using signal cables that are short.
- The liquid crystal display exhibits temperature dependency characteristics. Since recognition of the display becomes difficult when the LCD is used outside its designated operating temperature range, be sure to use the LCD within this range. Also, keep in mind that the voltage levels necessary for clear displays (Vop) will vary according to temperature.
- If DC is impressed on the liquid crystal display panel, display definition is rapidly deteriorated by the electrochemical reaction that occurs inside the liquid crystal panel. To eliminate the opportunity of DC impressing, be sure to maintain the AC characteristics of the input signals sent to the LCD Module (especially, LP, DIN, and FR).

SEIKO EPSON CORPORATION

Sheet
Code

B-PNMN0000-A(2)

- When turning the power supply ON/OFF, strictly follow the sequence shown in Fig. 1 so that latch-up and DC driving of the LCD Module can be prevented.

Fig. 1 Power supply ON/OFF sequence

Fig. 2 Example of power supply connection

Fig. 3 Example of SW section circuit

- Fig. 1 shows the voltage levels at the module terminal section when the module is connected to a power supply and signal lines.
- Regarding VLCD in Fig. 1, the dashed line shows the OFF status of SW in Fig. 2, while the solid line indicates the ON status.
- Prepare the negative power supply shown in Fig. 2 with a capacity that is at least sufficient to handle the current of the liquid crystal power supply in DC characteristics.
- Fig. 3 provides an example of the circuit for SW section in Fig. 2.

<Others>

- Liquid crystals solidify under low temperatures (below the storage temperature range) leading to defective orientation or the generation of air bubbles (black or white). Air bubbles may also be generated if the module is subjected to a strong shock at a low temperature.
- If the LCD Modules have been operating for a long time showing the same display patterns, the display patterns may remain on the screen as ghost images and a slight contrast irregularity may also appear. A normal operating status can be regained by suspending use for some time.
It should be noted that this phenomenon does not adversely affect performance reliability.
- To minimize the performance degradation of the LCD Modules resulting from destruction caused by static electricity, etc., exercise care to avoid holding the following sections when handling the modules.
 - Exposed area of the printed circuit board
 - Terminal electrode sections
