1. APPLICATION

This specification is applied to the 23inch WUXGA supported TFT-LCD module.

A

2. PRODUCT NAME AND MODEL NUMBER

2-1 Product Name: LCD Module

2-2 Model Name: FLC58UWC8V

A

3. OVERVIEW

This LCD module has a TFT active matrix type liquid crystal panel 1920x1200 pixels, and diagonal size of 58m(23inch). This LCD has a LVDS dual interface and can display 16,777,216 colors.

The power supply of this LCD module is +12V DC(logic) and +24VDC(inverter).②

This module has high response time circuit (HRC).

B

B

C

C

4. CONFIGURATION

This LCD module consists of a color TFT-LCD panel that is mounted with TFT driver ICs, a cold-cathode fluorescent tube back-light.

The inverter for the backlight is included.

Figure 4-1 shows a block diagram of this LCD module.

8. ELECTRICAL SPECIFICATIONS

TENTATIVE

Table 8-1 shows the electrical specifications of this LCD module. Figure 8-1 shows the measurement circuit. Figure 8-2(A) shows the equivalent circuit of the logic signal input area. Figure 8-2(B) shows the equivalent circuit of the supply voltage Input area.

Table 8-1 Electrical Specifications

Item	Symbol	Condition	MIN.	TYP.	MAX.	Unit	Remark	
Differential-input Voltage (High)	V _{IH}	V _{CM} =+1.2V	—	—	100	mV		
Differential-input Voltage (Low)	V _{IL}		-100	—	—	mV		
Supply Current	I _{CC}	V _{CC} =+12.0±0.5V V _{SS} =0V DCLK=81MHz 60Hz	—	(900)	(1200)	mA	*1	
Supply Rush Current	I _{SCC}		—	—	TBD	A	*2	
Supply Rush Current Duration (1A excess)	T _{SCC}		—	—	TBD	ms		
BACK LIGHT	Supply Current	I _{INV}	V _{INV} =②24.0 ±0.2V V _{VR} =0V	—	(4.2) ②(2.2)	TBD	A	*3
	Brightness Control Voltage	V _{VR}		0	—	3.5	V	
	Lighting Frequency	f	V _{INV} =②24.0 ±0.2V, V _{VR} =0V	—	(60)	—	kHz	
	Lighting Fix Voltage	V _{ent}		0	—	0.8	V	
	Non-Lighting Fix Voltage	V _{ent}		2.1	—	V _{INV}		

(*1) Typical current situation : Vertical gray scale. V_{CC}=12.0V
 Maximum current situation: (2pixel checker pattern. V_{CC}=11.5V)
 Without rush current.

(*2) These items prescribe the rush current for starting internal DC/DC.
 Charging current to capacitors of V_{CC} is not prescribed.

(*3) External power supply for inverter shall have the current capacity more than (TBD)A of the supply current (I_{INV}), otherwise the protective circuit of inverter (fuse) might not work.

Note 7) Definition of Brightness Uniformity

Brightness uniformity is defined by the following formula.
 Brightness (I1~I9) are measured at the following 9 points (①~⑨) on the display area that is shown in Figure 9-7.

C

$$\text{Brightness Uniformity } (\Delta L) = \frac{|\text{Min. In }|}{|\text{Max. In }|} \times 100 (\%), n = 1 \text{ to } 9$$

C

D

D

Note) Each measurement point (①~⑨) defines the center spot of view of Brightness Meter.
 The tolerance of measurement position is $\pm 3\text{mm}$.

Note.1) Definition of gray scale:Color (n)····n” indicates gray scale level.

Larger number means brighter level.

Note.2) Data: 1:High, 0:Low

Note 3) Color data consist of 8 bit red, green and blue data of odd and even number pixel data. Total data number is 48 signals. This module is able to display 16,777,216 colors because each red, green and blue data is controlled independently.

	Ver. Display period	Tvd	1200	1200	1200	Th
Data-ENAB timing	Tdn	—	0	—	DCLK	*3

A

B

B

C

C

- *1) • horizontal display position is specified by the rise of ENAB.
The data latched at falling edge of DCLK after rise of ENAB is displayed at the left edge of the display area.
- Vertical display position is specified by the rise of ENAB after low level continuation over 5500 DCLK.
The data latched at the rise of ENAB is displayed at the top line of the display area.
- *2) • If the “High” level period of ENAB is less than 960 DCLK, black color is displayed at the rest of the display area.
- *3) • If ENAB does not synchronize with the effective display data, the display position does not fit to the display area.
- *4) • If Vertical ENAB blank time shorter than 5500DCLK, LCD unit may stop display.
Please keep ENAB blank at anytime. (ex.: Change display mode.)

Figure 10-2 Correspondence Data and Display Position

10-6 Power Supply Sequence

The sequence of input signals and On/Off of the power supply of this LCD module should be in the specification shown in Figure 10-3 to prevent latch-up of the driver ICs and DC driving of the LCD panel.

Figure 10-3 Power Supply Sequence(Logic)

Note) If Power Supply Sequence not followed, the CMOS-IC may cause a latch-up, or DC voltage may be applied to the liquid crystal, which cause a failure or serious deterioration in display quality.

Figure 10-4 Power Supply Sequence(Inverter)

 Supplier:
 Japan solderless terminal manufacturing Co.Ltd.~~

~~Note1) N.C terminal should keep open.~~

Note2) V_{VR} input: 0V=Max. Brightness , 3.5V=Min. brightness

Note3) V_{ent} input: 0V=BL turn on, 2.1V or more = BL turn off

Note4) Keep the circuit GND (CN-3 pin ②6pin) apart from high-voltage GND (CN-2 ②6-10pin) (②6-10pin). Otherwise, the screen may cause flickering.

11-2 CCFL

Supplier: SANKEN ELECTRONICS Co.LTD.

Part No.: TBD

11-3 Life

The life of the back-light is a minimum of 50,000 hours at the following conditions.

(1) Working conditions

- (I) Ambient temperature : 25±5°C
- (II) Brightness control (V_{VR}) : 0V

(2) Definition of life

- (I) Brightness becomes 50% or less than the minimum brightness value shown in Table 9-1.
- (II) The lamp no longer lights
- (III) Lamp being flashing or flickering.

16.WARRANTY

The warranty period is one year after shipping. Products which fail during this period are repaired or replaced without charge, unless the failure is caused by user.

A

17.PRECAUTIONS

Adhere to the following precautions to use this LCD module properly.

(1) Handling of LCD panel

(i) Do not apply any strong mechanical shock to the LCD panel.

Since the LCD panel is made of glass, excessive shock may damage the panel or cause a malfunction.

B

(ii) Do not press hard on the LCD panel surface.

In the LCD panel, the gap between two glass plates is kept perfectly even to maintain display properties and reliability. The hard pressure on the LCD panel may cause the following problems. If the pressure is over 2kg/cm², the problem don't return to normal Condition.

- (a) Ununiformity of color
- (b) Disorder of orientation of liquid crystal

Problem (a) returns to normal condition after a while. Problem (b) returns to normal condition by turning the power off and turning on again.

However these operations should be avoided to insure reliability.

C

(iii) Do not scratch the polarizer film on the LCD panel surface.

- Do not press or rub the display surface with a hard tool, tweezers, etc.
- For handling, use cotton or conductive gloves so that the display surface is not soiled.
- If dust or dirt soils the display surface, clean it as follows with a soft cloth (deerskin, etc.)

[Dust] Wipe off with a soft cloth. (do not rub.)

[Dirt] Apply clear water to a soft cloth and squeeze hard out of water drops, then lightly wipe off the specified parts. Only if the dirt is hardly wiped off, use isopropyl alcohol or ethanol.

Be careful not to splash the water or the solvents on the edge of polarizer and in the LCD unit.

The polarizer possibly exfoliates due to the solvent and water penetrated between the polarizer and the LCD panel.

Do not use unspecified solvent such as ketone (acetone, etc.) and aromatics (xylene, toluene, etc.)

(Caution) Be careful not to allow the water or solvent to enter the module.

- If saliva or water drops are left for a long period of time, the part may become deformed or discolored.

Wipe off immediately in the same way as for dirt.

- Do not allow oil to adhere to the module since excessive oil is hard to clean.

EDIT	DATE	DESIG.	CHECK	APPR.	DESCRIPTION	FUJITSU DISPLAY TECHNOLOGIES CORPORATION	

A

B

C

D

E

F

TENTATIVE

A

(iv) Do not place or contact objects on the display surface for a long period of time.

This may make some parts of the LCD module distorted and the quality of display may deteriorate.

(2) Handling of LCD module

(i) Do not pull the cold-cathode tube cable strongly.

If the cable is pulled with the strength of 2kg or more, the cable may be damaged or may lose reliability.

(ii) Assemble the module into user's system in a dust free environment.

Conductive foreign matter adheres to the module may cause failures.

(iii) Take anti-electrostatic measures for assembling the module.

Since the LCD module contains CMOS-ICs, the following points should be observed.

- For assembling the module, operator should be grounded and wear cotton or conductive gloves.
- Floor of work area and work table to assemble the LCD module should be covered with electrostatic shielding in order to discharge static electricity via an earth wire.
- If necessary, ground operation tools (soldering iron, radio pliers, tweezers, etc.).
- Do not take the module out of the conductive bag until the module is assembled.
- Do not assemble the module under low humidity (50%RH or less).

(iv) Do not pull the connecting cable on the rear face of the LCD module strongly.

(v) Do not disassemble or remodel the LCD module.

Disassembly or remodeling of the LCD module may result in malfunctions or deterioration of the display quality and reliability.

(3) Precautions in regards of operating the LCD module

(i) Adhere to the specified power supply sequence.

If not followed, the CMOS-IC may cause a latch-up, or DC voltage may be applied to the liquid crystal, which cause a failure or serious deterioration in display quality.

(ii) Do not operate the LCD module when condensation occurs.

If the LCD module is operated when condensation is on the terminals of the LCD panel, the terminals cause electrochemical reaction, and may reach disconnection. Condensation easily occurs especially when the module is moved from cold environment to warm environment.

B

C

D

DOCUMENT CONTROL SECTION	↑
DATE	

						TITLE FLC58UWC8V	
						DRAW.NO. Tech Bes LCD-00274	
						23/	
EDIT	DATE	DESIG.	CHECK	APPR.	DESCRIPTION	FUJITSU DISPLAY TECHNOLOGIES CORPORATION	

TENTATIVE

A

(iii) The following troubles occur when the LCD module is not used under recommended temperature.

- Operation under high temperature(>50°C): Display colors shift to blue.
- Storage under high temperature(>60°C): The polarizer film deteriorates and contrast decreases.
- Operation under low temperature(< 0°C): The response speed decreases considerably.
- Storage under low temperature(<-20°C): The liquid crystal may solidify and become damaged.

B

(iv) Be sure to input the control signals at the correct timing.

If control signals (DCLK, ENAB) are not input, or if the timing is out of the specified timing, DC voltage may be applied to the liquid crystal and, as a result, cause image sticking or deterioration of contrast.

(4) Precautions in regards of designing module mounting

(i) Excessive force should not be applied to the screen or the rear side of the LCD module.

Excessive pressure on the screen caused by the installation of the LCD module may deteriorate display quality and reliability.
Brightness uniformity and the reliability of CCFL may decrease if the pressure is applied to the backlight module.

(ii) Avoid twisting and bending the LCD module.

Excessive twist and bend may damage display quality and reliability.

(iii) Avoid extending the power cable between the LCD module and inverter.

This may cause the backlight to flicker or not to light.

(iv) Keep the backlight cable apart from the metal enclosure of the LCD module.

When frequency current for backlight driving leak to the metal enclosure, the desired brightness may not be assured.

(v)When Mounting LCD module with M3 screws (x6), tighten the screws with torque below (29.4Nm(3kgf)).

(5) Storage method

(i) Do not store the LCD module in an atmosphere of organic solvent or corrosive gas.

In an organic solvent atmosphere, the polarizer film discolors and display quality deteriorates.

In a corrosive gas environment, various parts of the module may corrode or deteriorate.

(ii) Store the LCD module in a Fujitsu package.

At storing, Fujitsu packages can be stacked up to 3 boxes.

The LCD module is in an anti-static bag. Keep the module in that status.

						24/	
EDIT	DATE	DESIG.	CHECK	APPR.	DESCRIPTION	FUJITSU DISPLAY TECHNOLOGIES CORPORATION	

TENTATIVE

A

(iii) The LCD module is recommended to be stored in humidity controlled, cool and dark locations.

Recommended storage environment

- Place : Dark (avoid direct sunlight)
- Temperature : 10~35°C
- Humidity : 50~60%RH

Note) If the module is left in an environment of 60°C and above for a long period of time, optical characteristics may deteriorate.

A

B

(6) Disposal Method

(i) LCD module

The components of this LCD module can be grouped into metal, resin, glass and so on. As the backlight contains CCFL which includes mercury, it must be disposed according to the local ordinance or regulations.

(ii) Package

All the packages are made of recyclable papers except the anti-ESD bag.

B

C

(7) Others

(i) If the LCD panel is damaged, do not inhale and do not swallow the liquid crystal.

If the liquid crystal adhere to the body or cloths, wash it off with soap immediately. Follow regular precautions for electronic components.

(ii) Flux residue on the printed circuit board is harmless to the quality and reliability of LCD module.

Fujitsu has adopted non-wash technology on module assembly process.

18. MISCELLANEOUS

Specifications of the TFT-LCD panel and other components used in the LCD module are subject to change.

Both parties shall discuss together and make the best effort to reach agreement in case of the rising of any doubt to the contents of the specifications.

This LCD module is not designed for the purpose where high reliability is required, such as for aero-space equipment, control system of nuclear power and medical life-support equipment.
