HannStar Product Specification
(Formal)

Model: HSD101PFW2-B

Note:

(1) Please contact HannStar Display Corp. before designing your product based on this module specification.
(2) The information contained herein is presented merely to indicate the characteristics and performance of our products. No responsibility is assumed by HannStar for any intellectual property claims or other problems that may result from application based on the module described herein.

1.0 GENERAL DESCRIPTION

1.1 Introduction

HannStar Display model HSD101PFW2-B is a color active matrix thin film transistor (TFT) liquid crystal display (LCD) that uses amorphous silicon TFT as a switching device. This model is composed of a TFT LCD panel, a driving circuit and a back light system. This TFT LCD has a 10.1 (16:9) inch diagonally measured active display area with WSVGA (1024 horizontal by 600 vertical pixel) resolution.

1.2 Features

- 10.1 (16:9 diagonal) inch configuration
- One channel LVDS interface
- 262K color by 6 bit R.G.B signal input
- RoHS Compliance
- Halogen Free

1.3 Applications

- Mobile NB
- Digital Photo frame
- Display terminal for AV application

#### 3.2 Measuring Condition

- Measuring surrounding: dark room
- Ambient temperature: 25±2°C
- 15min. warm-up time.
3.3 Measuring Equipment

- FPM520 of Westar Display technologies, INC., which utilized SR-3 for Chromaticity and BM-5A for other optical characteristics.
- Measuring spot size: 20 ~ 21 mm

**Note (1)** Definition of Viewing Angle:

![Diagram showing viewing angles at different points](image)

**Note (2)** Definition of Contrast Ratio (CR):
measured at the center point of panel

\[
\text{CR} = \frac{\text{Luminance with all pixels white}}{\text{Luminance with all pixels black}}
\]
**Note (3)** Definition of Response Time: Sum of $T_R$ and $T_F$

![Diagram of optical response with $T_R$ and $T_F$](image)

**Note (4)** Definition of optical measurement setup

![Diagram of optical measurement setup](image)

The information contained in this document is the exclusive property of HannStar Display Corporation. It shall not be disclosed, distributed or reproduced in whole or in part without written permission of HannStar Display Corporation.
**Note (5)** Definition of Average Luminance Uniformity of White (5 Point)

Average Luminance Uniformity = \( \frac{Y_1 + Y_2 + Y_3 + Y_4 + Y_5}{5} \)

**Note (6)** Definition of brightness uniformity

Luminance uniformity(5 points) = \( \frac{(\text{Min Luminance of 5 points})}{(\text{Max Luminance of 5 points})} \) \times 100%

Luminance uniformity(13 points) = \( \frac{(\text{Min Luminance of 13 points})}{(\text{Max Luminance of 13 points})} \) \times 100%

6.5 Power On / Off Sequence

Note:

1. The supply voltage of the external system for the module input should be the same as the definition of V_{DD}.
2. Apply the lamp voltage within the LCD operation range. When the back-light turns on before the LCD operation or the LCD turns off before the back-light turns off, the display may momentarily become white.
3. In case of VDD = off level, please keep the level of input signal on the low or keep a high impedance.
4. TP4 should be measured after the module has been fully discharged between power off and on period.
5. Interface signal shall not be kept at high impedance when the power is on.

11.0 GENERAL PRECAUTION

11.1 Use Restriction
This product is not authorized for use in life supporting systems, aircraft navigation control systems, military systems and any other application where performance failure could be life-threatening or otherwise catastrophic.

11.2 Disassembling or Modification
Do not disassemble or modify the module. It may damage sensitive parts inside LCD module, and may cause scratches or dust on the display. HannStar does not warrant the module, if customers disassemble or modify the module.

11.3 Breakage of LCD Panel
11.3.1. If LCD panel is broken and liquid crystal spills out, do not ingest or inhale liquid crystal, and do not contact liquid crystal with skin.
11.3.2. If liquid crystal contacts mouth or eyes, rinse out with water immediately.
11.3.3. If liquid crystal contacts skin or cloths, wash it off immediately with alcohol and rinse thoroughly with water.
11.3.4. Handle carefully with chips of glass that may cause injury, when the glass is broken.

11.4 Electric Shock
11.4.1. Disconnect power supply before handling LCD module.
11.4.2. Do not pull or fold the LED cable.
11.4.3. Do not touch the parts inside LCD modules and the fluorescent LED’s connector or cables in order to prevent electric shock.

11.5 Absolute Maximum Ratings and Power Protection Circuit
11.5.1. Do not exceed the absolute maximum rating values, such as the supply voltage variation, input voltage variation, variation in parts’ parameters, environmental temperature, etc., otherwise LCD module may be damaged.
11.5.2. Please do not leave LCD module in the environment of high humidity and high temperature for a long time.
11.5.3. It’s recommended to employ protection circuit for power supply.

11.6 Operation
11.6.1 Do not touch, push or rub the polarizer with anything harder than HB pencil lead.
11.6.2 Use fingerstalls of soft gloves in order to keep clean display quality, when persons handle the LCD module for incoming inspection or assembly.
11.6.3 When the surface is dusty, please wipe gently with absorbent cotton or other soft material.
11.6.4 Wipe off saliva or water drops as soon as possible. If saliva or water drops contact with polarizer for a long time, they may causes deformation or color fading.

11.6.5 When cleaning the adhesives, please use absorbent cotton wetted with a little petroleum benzine or other adequate solvent.

11.7 Mechanism
Please mount LCD module by using mounting holes arranged in four corners tightly.

11.8 Static Electricity
11.8.1 Protection film must remove very slowly from the surface of LCD module to prevent from electrostatic occurrence.
11.8.2 Because LCD module use CMOS-IC on circuit board and TFT-LCD panel, it is very weak to electrostatic discharge. Please be careful with electrostatic discharge. Persons who handle the module should be grounded through adequate methods.

11.9 Strong Light Exposure
The module shall not be exposed under strong light such as direct sunlight. Otherwise, display characteristics may be changed.

11.10 Disposal
When disposing LCD module, obey the local environmental regulations.
