## 3. GENERAL SPECIFICATIONS

(1) Part Name SP12Q01L6ALZZ

(2) Module Size 129.6(W)mm x 92.6(H)mm x 7.5(D)mm

(3) Effective Area 100(W)mm min. x 75.5(H)mm min.

(4) Dot Size 0.285(W)mm x 0.285(H)mm

(5) Dot Pitch 0.3(W)mm x 0.3(H)mm

(6) Dot Number 320 (W) x 240 (H)

(7) Duty Ratio 1/240

(8) LCD Type Transmissive type F-B / W STN

The upper polarizer is Anti-Glare Type.

(9) Viewing Direction 6 O'clock

(10) Viewing Angle Wide Viewing Angle

(11) Operating Temperature Wide Temperature Range

(12) Backlight Type LED(Color : white)

(13) Weight (110g)

### 4. ABSOLUTE MAXIMUM RATINGS

#### 4.1 ELECTRICAL ABSOLUTE MAXIMUM RATINGS.

VSS=0V:STANDARD

ITEM	SYMBOL	MIN.	MAX.	UNIT	COMMENT	
Power Supply for Logic	VDD-VSS	0	6.5	V		
Power Supply for LC Drive	VDD-VEE	0	27.5	V		
Input Voltage	Vi	-0.3	VDD+0.3	V	(Note 1)	
Input Current	li	0	1	A		
Static Electricity	-	-	100	_	(Note 2)	

Note 1: DOFF, FLM, CL1, CL2, D0~D3.

Note 2: Make certain you are grounded when handling LCM.

#### 4.2 ENVIRONMENTAL ABSOLUTE MAXIMUM RATINGS.

ITEM	OPERATING		ST	ORAGE	COMMENT
	MIN.	MAX.	MIN. MAX.		
Ambient Temperature	-20℃	<b>70℃</b>	-30℃	80℃	(Note 2,3,6)
		(Note 5)			
Humidity	(N	ote 1)	1)	lote 1)	Without Condensation
		2.45m/s <sup>2</sup>		11.76m/s <sup>2</sup>	
Vibration	_	(0.25G)	-	(1.2G)	(Note 4)
				(Note 5)	
		29.4m/s <sup>2</sup>		490.0m/s <sup>2</sup>	
Shock	-	(3 G)	-	(50 G)	X、Y、Z Directions
				(Note 5)	
Corrosive Gas	Not Acc	ceptable	Not Ac	ceptable	

Note 1 : Ta≦40°C : 85%RH max.

Ta>40°C: Absolute humidity must be lower than the humidity of 85%RH at 40°C.

Note 2: Ta at -20°C ---< 48h, at 60°C ---< 168h.

Note 3: Background color changes slightly depending on ambient temperature.

This phenomenon is reversible.

Higher LCD driving voltage is needed while operating at 0℃.

Note 4: 5Hz~100Hz(Except resonance frequency and X,Y,Z each direction within 1h)

Note 5: This module should be operated normally after finish the test.

Note 6: The response time will be slower under low temperature.

#### 10. APPEARANCE STANDARD

#### 10.1 APPEARANCE INSPECTION CONDITION

Visual inspection should be done under the following condition.

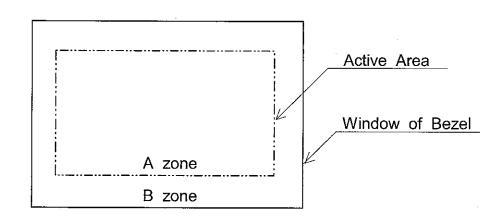

- (1) In the dark room.
- (2) With CFL panel lighted with prescribed inverter circuit.
- (3) With eyes 25cm distance from LCM.
- (4) Viewing angle within 45 degrees from the vertical line to the center of LCD.

#### 10.2 DEFINITION OF EACH ZONE

A zone: Within the active area line specified at page 9-1/1 of this document.

B zone: Area between the window of bezel line and the active area line specified at page 9-1/1 of this document.

#### 11. PRECAUTION IN DESIGN

#### 11.1 MOUNTING METHOD

Since the module is so constructed as to be fixed by utilizing fitting holes in the printed circuit board as shown below, it is necessary to take consideration the following items on attachment to a frame.

- (1) Use of protective plate, made of an acrylic plate, etc. In order to protect a polarizer and LC cell.
- (2) To prevent the module cover from being pressed, the spacers between the module and the fitting plates should be longer than 0.5mm.
- (3) We recommend you to use protective spacer as figure for protecting LCD module from any kind of shock to your set.
- 11.2 LC DRIVING VOLTAGE(VEE) AND VIEWING ANGLE RANGE
  Setting VEE out of the recommended condition will be a cause for a change of viewing angle range.

ELECTRONICS CO.,LTD.			No.	, , , , , , , , , , , , , , , , , , , ,		

#### 11.3 CAUTION AGAINST STATIC CHARGE

As this module is provided with C-MOS LSIs, The care to take such a precaution as to grounding the operator's body is required when handling it.

#### 11.4 POWER ON SEQUENCE

Input signals should not be applied to LCD module before power supply voltage is applied and reaches to specified voltage ( $5V \pm 5\%$ ).

If above sequence is not kept, C-MOS LSIs of LCD modules may be damaged due to latch up problem.

#### 11.5 PACKING

- (1) No. Leaving products is preferable in the place of high humidity for a long period of time. For their storage in the place where temperature is 35℃ or higher, special care to prevent them from high humidity is required. A combination of high temperature and high humidity may cause them polarization degradation as well as bubble generation and polarizer peel-off. Please keep the temperature and humidity within the specified range for use and storage.
- (2) Since upper/bottom polarizers tend to be easily damaged, They should be handled full with care so as not get them touched, pushed or rubbed.
- (3) As the adhesives used for adhering upper/bottom polarizers are made of organic substances which will be deteriorated by a chemical reaction with such chemicals as acetone, toluene, ethanol and isopropyl alcohol. The following solvents are recommended for use:

normal hexane

Please contact us when it is necessary for you to use chemicals.

- (4) Lightly wipe to clean the dirty surface with absorbent cotton waste or other soft material like chamois, soaked in the chemicals recommended without scrubbing it hardly. To prevent the display surface from damage and keep the appearance in good state, it is sufficient, in general, to wipe it with absorbent cotton.
- (5) Immediately wipe off saliva or water drop attached on the display area because its long period adherence may cause deformation or faded color on the spot.
- (6) Fogy dew deposited on the surface and contact terminals due to coldness will be caused for polarizer damage, stain and dirt on product. When necessary to take out the products from some place at low temperature for test, etc. It is required for them to be warmed up in a container once at the temperature higher than that of room.

KAOHSIUNG HITACHI			Sh.	770470 0744 0740004 0A4 77 4	DAGE	44.00
ELECTRONICS CO.,LTD.	DATE	Jul.28.'04	No.	7B64PS 2711-SP12Q01L6ALZZ-1	PAGE	11-2/3

- (7) Touching the display area and contact terminals with bare hands and contaminating them are prohibited, because the stain on the display area and poor insulation between terminals are often cause by being touched by bare hands. (there are some cosmetics detrimental to polarizers.)
- (8) In general the quality of glass is fragile so that it tends to be cracked or chipped in handling, specially on its periphery. Because be careful not to give it sharp shock caused by dropping down, etc.

#### 11.6 CAUTION FOR OPERATION

- (1) It is an indispensable condition to drive LCDs within the specified voltage limit since the higher voltage than the limit causes the shorter LCD life. An electrochemical reaction due to direct current causes LCDs undesirable deterioration, so that the use of direct current driver should be avoided.
- (2) Response time will be extremely delayed at lower temperature than the operating temperature range and on the other hand at higher temperature LCDs show dark bull color in them. However those phenomena do not mean malfunction or out of order with LCDs which will come back in the specified operating temperature range.
- (3) If the display area is pushed hard during operation, some font will be abnormally display but it resumes normal condition after turning off once.
- (4) A slight dew depositing on terminals is a cause for electrochemical reaction resulting in terminal open circuit. Usage under the relative condition of 40℃ 50%RH or less is required.

#### 11.7 STORAGE

In case of storing for a long period of time (for instance, for years) for the purpose of replacement use, the following ways are recommended.

- (1) Storage in a polyethylene bag with the opening sealed so as not to enter fresh air outside in it, and with no desiccant.
- (2) Placing in a dark place where neither exposure to direct sunlight nor light is, keeping temperature in the range from  $0^{\circ}$ C to  $35^{\circ}$ C.
- (3) Storing with no touch on polarizer surface by anything else. (It is recommended to store them as they have been contained in the inner container at the time of delivery from us.)

#### 11.8 SAFETY

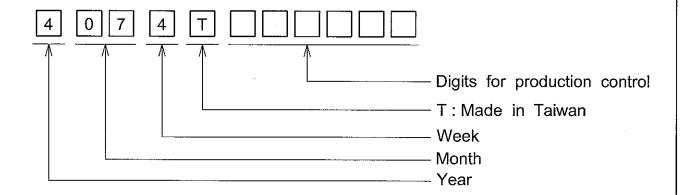

- (1) It is recommendable to crash damage or unnecessary LCDs into pieces and wash off liquid crystal by either of solvents such as acetone and ethanol, which should be burned up later.
- (2) When any liquid leaked out of a damage glass cell comes in contact with your hands, please wash it off well with soap and water.

#### 13. PRECAUTION FOR USE

- 13.1 A limit sample should be provided by the both parties on an occasion when the both parties agreed its necessity. Judgement by a limit sample shall take effect after the limit sample has been established and confirmed by the both parties.
- 13.2 On the following occasions, the handling of the problem should be decided through discussion and agreement between responsible persons of the both parties.
  - (1) When a question is arisen in the specifications.
  - (2) When a new problem is arisen which is not specified in this specifications.
  - (3) When an inspection specifications change or operating condition change in customer is reported to HITACHI, and some problem is arisen in this specification due to the change.
  - (4) When a new problem is arisen at the customer's operating set for sample evaluation in the customer site.

The precaution that should be observed when handling LCM have been explained above. If any points are unclear or if you have any request, please contact HITACHI.
