Note 4 : Rush Current of Power ON : 1A (PK) x 1ms + 0.15A (PK) x 20ms.
Note 5 : The Contrast Adjustment Voldtage is specified as 2.0±0.5V under the condition, that optimum contrast is obtained by naked eyes with a " Q " test pattern. fFLM=70H , 1/240 Duty.
Note 6 : Need to make sure of flickering and rippling of display when setting the frame frequency in your set.
Note 7 : Some points for attention while setting driving condition of appliance

(1) Frame Frequency

Please set the frame frequency as the typical value (central vale) which in CAS. According to the characteristic or response time of LC material, that setting the frame frequencly near the minimum value or under tlhe minimum value shown in CAS will cause a frame with moving phenomenon.

(2) Setting value VCON

VCON, adjusted to get the best contrast ratio of LCD module, is adjusted to be destributed within the tolerance ±0.3V of central value in CAS before LCD modules ship the factory.

The below items are recommended at customer side.

(i) When designing the appliance, please set the VCON value as an adjustable value.

(ii) And the value must be able to be adjusted to match most suitable VCON to get the best contrast ratio. A fixed VCON value a little different from the most suitable VCON value of LCD module and causes a misjudgement.

(iii) The VCON adjustment (when D/A [Digital/Analog] converter is used) is recommended to be set as 50mV at most per step. That one step is more than 50mV may cause the input value to be not able match the most suitable value.

The characteristic of contrast ratio can not present absolutely.

10. APPEARANCE STANDARD

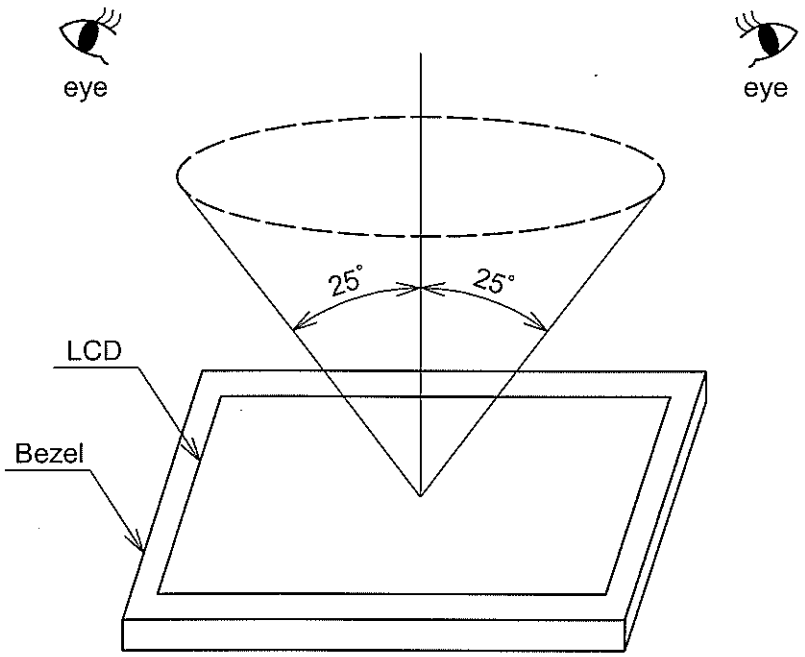
10.1 APPEARANCE INSPECTION CONDITION

Visual inspecton should be done under the following condition.

(1) The inspection should be done in a dark room.

(2) The distance between eyes of an inspector and the LCD module is 25cm.

(3) The viewing zone is shown the figure.
Viewing angle $\leqq 25^{\circ}$.



10.2 DEFINITION OF ZONE

A zone : Within the active area line specified at page 9-1/1 of this document.

B zone : Area between the effective area line and the active area line specified at page 9-1/1 of this document.

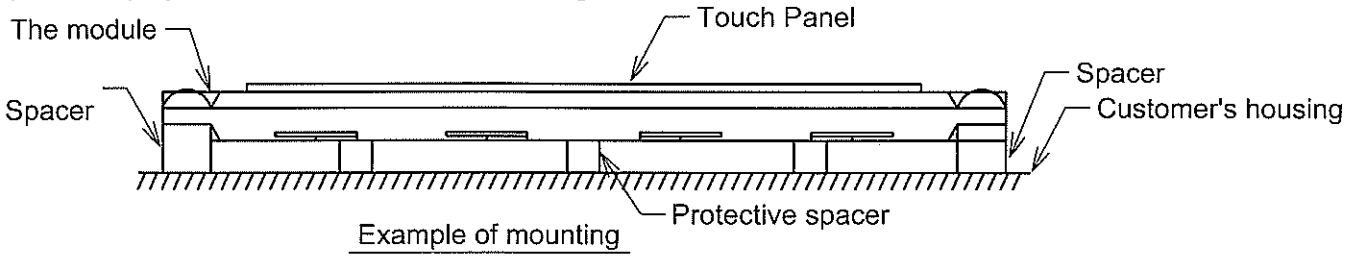
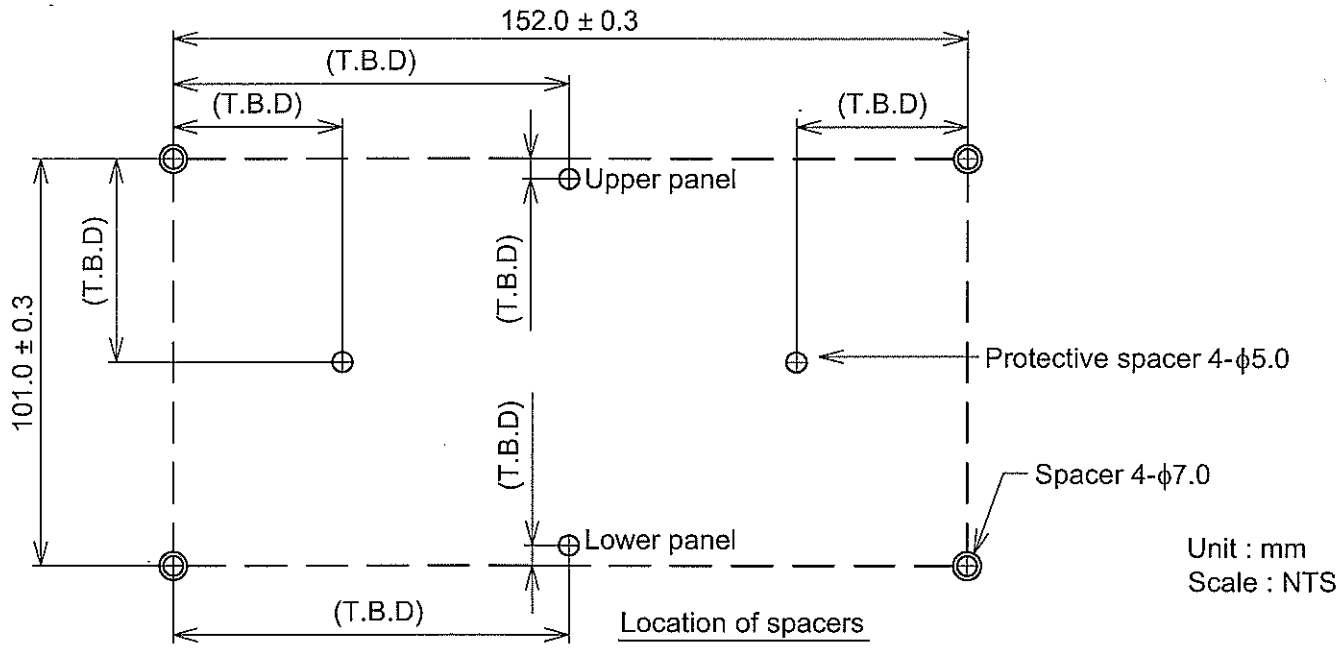
11. PRECAUTION IN DESIGN

11.1 MOUNTING PRECAUTION

Please mount the LCD module by using mounting holes provided. While mounting please pay attention to the followings.



Example of mounting



Location of spacers

(1) To prevent the module cove from being pressed, the distance between the module and the fitting plate, which means the length of the spacers, should be shorter than 1.0mm.

(2) The protective spacers are recommend in order to protect the module from shock.

11.2 PRECAUTIONS AGAINST ELECTROSTATIC DISCHARGE

As this module contains C-MOS LSIs, it is not strong against electrostatic discharge. Make certain that the operator's body is connected to the ground through a list band, etc. And don't touch I/F pins directly.

11.3 POWER ON SEQUENCE

Input signals should not be applied to LCD module before power supply voltage is applied and reaches to specified voltage (3.3±0.15V). If the above sequence is not kept, C-MOS LSIs of LCD module may be damaged due to latch up phenomenon.

11.4 HANDLING PRECAUTIONS

(1) Since the polarizer on the top, and the aluminum plate on the bottom tend to be easily damaged, the should be with full care so as not to get them touched, pushed or rubbed by a piece on glass, tweezers and anything else which are hander a pencil lead 3H.

(2) As the adhesives used for adhering upper/lower polarizers and aluminum plate are made of organic substances which will be deteriorated by a chemical reaction with such chemicals as acetone, tuluene, ethanole and isopropylalcohol. The following are recommended for use :
normal hexane.
Please contact with us when it is necessary for you to use chemicals other than the above.

(3) Lightly wipe to clean the dirty surface with absorbent cotton or other soft material like chamois, soaked in the recommended chemicals without scrubbing it hardly. Always wipe the surface horizontally or vertically. Never give a wipe in a circle. To prevent the display surface from damage and keep the appearance in good state, it is sufficient, in general, to wipe it with absorbent cotton.

(4) Immediately wipe off saliva or water drop attached on the display area because it may cause deformation or faded color.

(5) Fogy dew deposited on the surface may cause a damage, stain or dirt to the polarizer. When you need to take out the LCD module from some place at low temperature for test, etc. It is required to be warmed them up to temperature higher than room temperature before taking them out.

(6) Touching the display area or I/F pins with bare hands or contamilnating them are prohibited, because the stain on the display area and poor insulation between terminals are often caused by being touched with bare hands.
(Some cosmetics are detrimental to polarizers.)

(7) In general, the glass is fragile so that, especially on its periphery, tends to be cracked or chipped in handling. Please not give the LCD module sharp shocks by falling, etc.

(8) Maximum pressure to the surface must be less than 1.96×10^4 Pa. And if the pressure area is less than $1cm^2$, maximum pressure must be less than 1.96N.

(9) Since the metal width is narrow on these locations (see page 9-1/1), please careful with handling.

(10) Top sheets shall be cleaned gently using a soft cloth such as those used for glasses. Hard wiping accumulated dust will leave scars on the surface even using a cloth.

11.5 OPERATION PRECAUTION

(1) Using a LCM module beyond its maximum ratings may result in its permanent destruction. LCM module's should usually be used under recommended operating conditions shown in chapter 5. Exceeding any of these conditions may adversely affect its reliability.

(2) Response time will be extremely delayed at lower temperature than the specified operating temperature range and on the other hand LCD's shows dark blue at higher temperature.
However those phenomena do not main defects of the LCD module. Those phenomena will disappear in the specified operating temperature range.

(3) If the display area is pushed hard during operation, some display patterns will be abnormally display.

(4) A slight dew depositing on terminals may cause electrochemical reaction which leads to terminal open circuit. Please operate the LCD module under the relative condition of 40℃ 85%RH.

(5) Since STN-LCD is sensitive for heat please consider the heat prodession from any heat sources like inverter , DC/DC converter , CPU and so on.

(6) Resistance range : Your controller shall be set up to allow the resistance range of Touch Panel specified in our CAS.

(7) Pointed position of Touch Panel may shift owing to a change in resistance of Touch Panel depending on the operation condition. To compensate this shift, the set shall be given a calibration function.

(8) Input shall be made with a stylus pen (polyacetal, R0.8). Chances are very high that use of a metal piece including a ball point pen or sharp edge will impair accuracy.

(9) The Touch Panel is an auxiliary input device. The system shall be designed to have other input device.

11.6 STORAGE

In case of storing LCD module for a long period of time (for instance, for years) for the purpose of replacement use, the following precautions necessary.

(1) Store the LCD modules in a dark place, do not expose them to sunlight or ultraviolet rays.
(2) Keep the temperature between 10℃ and 35℃ at normal humidity.
(3) Store the LCD modules in the container which is used for shipping from us.
(4) No articles shall be left on the surfacae over an extended period of time.

11.7 SAFETY

(1) It is recommendable to crash damaged or unnecessary LCDs into pieces and wash off liquid crystal by either of solvents such as acetone and ethanol , which should be urned up later.

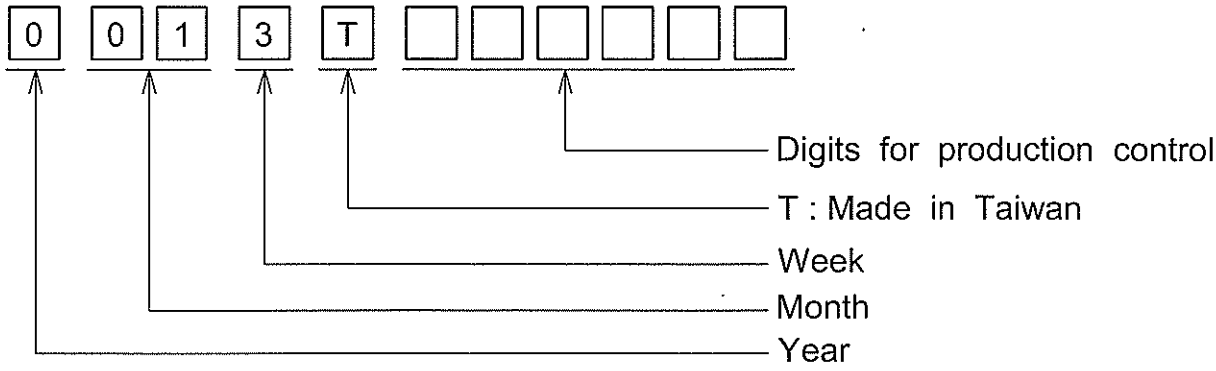
(2) When any liquid leaked out of a damaged gless cell comes in contact with your hands , please wash it off well with soap and water.

(3) Wear finger cots or gloves whenever handling or assembling a Touch Panel its glass edges are sharp.

12. DESIGNATION OF LOT MARK

12.1 LOT MARK

Lot mark is consisted of 4 digits for production lot and 6 digits for production control.



Year	Figure in lot mark
2010	0
2011	1
2012	2
2013	3
2014	4

Month	Figure in lot mark	Month	Figure in lot mark
Jan.	01	Jul.	07
Feb.	02	Aug.	08
Mar.	03	Sep.	09
Apr.	04	Oct.	10
May	05	Nov.	11
Jun.	06	Dec.	12

Week (day in calendar)	Figure in lot mark
1~7	1
8~14	2
15~21	3
22~28	4
29~31	5

12.2 REVISION

REV No.	ITEM	Note
A	-	-
B	Operating Life (40,000h)	PCN0625
C	DC-DC converter with Resin coating	PCN0736
D	New DC-DC converter	PCN0758
E	New color filter	PCN0772 , PCN0783

12.3 LOCATION OF LOT MARK

On the back side of LCM.

13. PRECAUTION FOR USE

(1) A limit sample should be provided by the both parities on an occasion when the both parties agree to its necessity.
Judgement by a limit sample shall take effect after the limit sample has been established and confirmed by the both parties.

(2) On the following occasions, the handling of the problem should be decided through discussion and agreement between responsible persons of the both parties.
(1) When a question is arisen in the specifications.
(2) When a new problem is arisen which is not specified in this specifications.
(3) When an inspection specifications change or operating condition change by customer is reported to HITACHI, and some problem is arisen in the specification due to the change.
(4) Whe a new peoblem is arisen at the customer's operating set for sample evaluation.

(3) Regarding the treatment for maintenance and repairing, bothl parties will discuss it in six months later after latest delivery of this product.

The precaution that sould be observed when handling LCM have been explained above.
If any points are unclear or if you have any requests, please contact with HITACHI.

14 ELECTRICAL CHARACTERISTICS OF TOUCH PANEL

14.1 ENVIRONMENTAL ABSOLUTE MAXIMUM RATINGS (TOUCH PANEL)

ITEM	SPECIFICATION	NOTE
Voltage	7VDC max.	
Current	20mA max.	

14.2 OPERATING CONDITION

ITEM	SPECIFICATION
Operating Voltage	5 VDC
Operating Current	20 mA max.

14.3 ELECTRICAL CHARACTERISTICS

ITEM		SPECIFICATION	NOTE
Resistance Between Terminal	XR-XL	210~640Ω	
	YT-YB	240~680Ω	
Insulance Resistance	X-Y	20MΩ min.	Operating Voltage : 25VDC
Linearity	X	1.5% max.	Condition See (Note 1)
	Y	1.5% max.	
Chattering		10ms max.	

14.4 MESCHANICAL CHARACTERISTICS

ITEM	SPECIFICATION	NOTE
Pen Input Pressure	1.2N max.	Pin : R0.8 Polyacetal
Finger Input Pressure	1.2N max.	R8.0 Silicon rubber
Surface Hardness	2H min.	JIS K5400

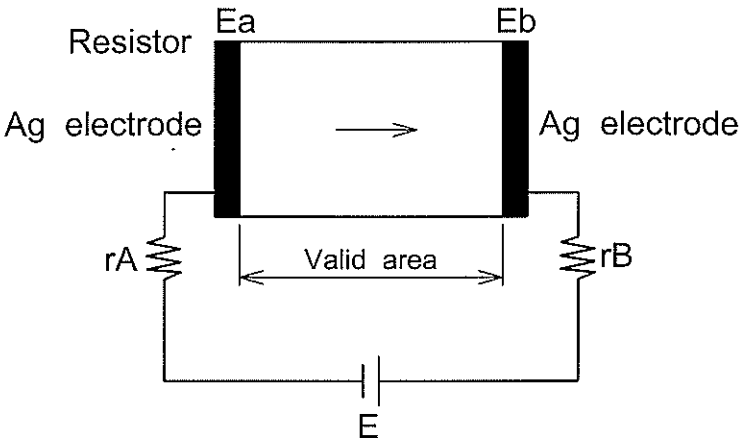
14.5 OPTICAL CHARACTERISTICS

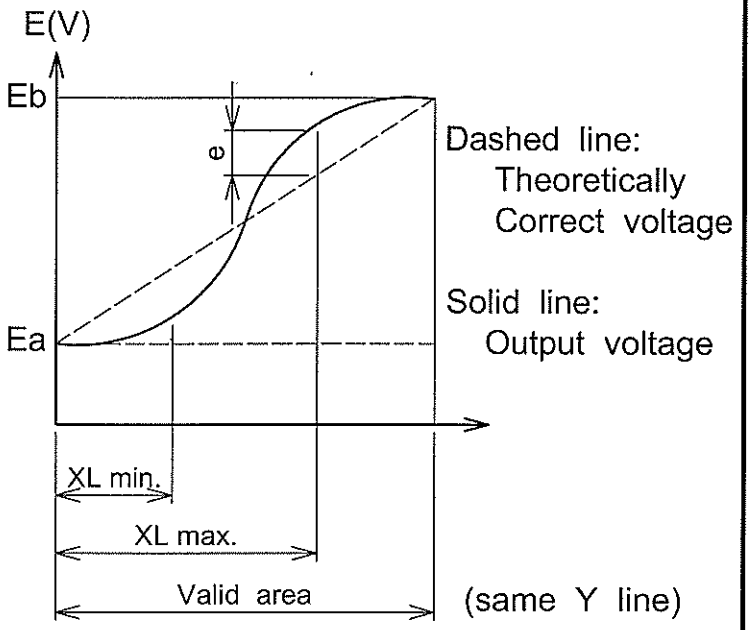
ITEM	SPECIFICATION	NOTE
Transparency	80% min.	Wave length 550 nm

Note 1 : Test Method and Conditions

The difference ("e") between the theoretical output voltage and the actual output voltage when pressure is applied to any point within the valid area must be as indicated below.

$$\frac{e}{Eb\text{-}Ea} \times 100\%$$





14.5 TOUCH PANEL APPEARANCE

ITEM	CRITERIA		
Scratch	W＞0.10	L≧10	None
	0.10≧W＞0.05	L＜10	4pcs max.
	0.05≧W	L＜10	ignored
Dust (Linear)	W＞0.10	—	Dust (Circular)

	0.05≧W	L≦3	ignored
Dust (Circular)	D＞0.35		None
	0.35≧D＞0.25		6pcs max.
	0.25≧D		ignored

Applied only in the active area. Scratches or dusts in the outside of the active area are acceptable unless the electrical characteristics are affected.

- Dirt
  Acceptable if not noticeable on a black mat.
- Tip, crack (applicable to glass only).

ITEM	CRITERIA			
Tip Corner		X	≦3	Not acceptable if the film is damaged
