#### 4.2 ENVIRONMENTAL ABSOLUTE MAXIMUM RATINGS

4.2 ENVIRONMENTAL ABSOLUTE MAXIMUM RATINGS							
ITEM	OPERATING		ST	ORAGE	COMMENT		
	MIN.	MAX.	MIN.	MAX.			
Ambient temperature	5°C	40°C	-20°C	60°C	NOTE 2,3,4		
Humidity	N	lote 1	Note 1		Without condensation		
Vibration	-	2.45m/s <sup>2</sup>	-	11.76m/s <sup>2</sup> Note 5	1 h max . Note 6		
Shock	-	29.4m/s <sup>2</sup>	-		XYZ directions 11ms Note 6		
Corrosive Gas	Not a	cceptable	Not acceptable				

NOTE (1) Ta<=40°C :85%RH max.

Ta>40°C :Absolute humidity must be lower than the humidity of 85%RH at 40°C.

- Note (2) Ta at -20°C-----< 48h, at 60°C-----< 168h.
- Note (3) Background color changes slightly depending on ambient temperature This phenomenon is reversible.
- Note (4) This LCM will be operated less than 5°C. The life time of CFL will reduced need to make sure of value IL and characteristics of inverter, also the response time less than 5°C will be slower.
- Note (5) This module should be operated normally after finish the test.
- Note (6) The module do not have mounting hole. It should be fixed by the may of sandwiching-like method. (Fig.1)

#### 5. ELECTRICAL CHARACTERISTICS

#### 5.1 ELECTRICAL CHARACTERISTICS OF LCD

LELCINICAL CHANACTE						
ITEM	SYMBOL	CONDITION	MIN.	TYP.	MAX.	UNIT
Power Supply Voltage	VDD	VDD-VSS=3.3V	3.15	3.30	3.45	V
Contrast Adjustment	VCON	-	0.8	-	2.8	V
Voltage (Note 1)						
Input Voltage for Logic	Vi	"H" level	0.8VDD	-	VDD	V
Circuits (Note 2)	VI	"L" level	0	-	0.2VDD	v
Power Supply Current (Note 4)	IDD	VDD-VSS=3.3V	-	(46)	-	mA
Input Leak Current	Icon(Note5)	Vcon=0.8~2.8V	-	-	(20)	
	lin(Note2)	Vin=VDDorVSS	-	-	± 1.0	μA
Contrast Adjustment		Ta= 5°C ,	(1.5)	(2.0)	-	
Voltage	Vcon	Ta=25°C ,	-	(2.0)	-	V
(Note 6)		Ta=40°C , φ=0°	-	(2.0)	(2.5)	
Frame Frequency (Note 7)	fFLM	-	-	150	-	Hz

(Note 1) In proportion as the VCON voltage decrease the brightness will increase.

(Note 2) DISP • OFF ,FLM ,CL1 ,CL2 ,D0~D7.

(Note 3) fFLM=150Hz Ta=25°C, Display pattern: Checker pattern.

(Note 4) Rush Current of Power ON : 1A(PK) × 1ms + 0.15A(PK)×20ms

(Note 5) VCON

(Note 6) Recommended Contrast Adjustment Voltage fluctuates about  $\pm$  0.3V by each module.

Temperature compensation circuit included in LCM. (only typ values)

(Note 7) Need to make sure of flickering and rippling of display when setting the Frame Frequency in your set.

#### (Note 8) Some points for attention while setting driving condition of appliance

(1) Frame Frequency

Please set the frame frequency as the typical value (central vale) which in CAS. According to the characteristic or response time of LC material, that setting the frame frequency near the mininum value or under the minimum value shown in CAS will cause a frame with moving phenomenon.

(2) Setting value Vcon

Vcon, adjusted to get the best contrast ratio of LCD module, is adjusted to be distributed within the tolerance  $\pm$  0.3V of central value in CAS before LCD modules ship the factory.

The below items are recommended at customer side.

- (i) When designing the appliance, please set the Vcon value as an Adjustable value.
- (ii) And the Vcon value must be able to be adjusted to match most suitable Vcon to get the best contrast ratio. A fixed Vcon value a little different from the most suitable Vcon value of LCD module and causes a misjudgment.
- (ii) The Vcon adjustment(when D/A [Digital/Analogue] converter is used) is recommended to be set as 50mV at most per step. That one step is more than 50mV may cause the input value to be not able match the most suitable value.

The characteristic of contrast ratio can not present absolutely.

#### 10. APPEARANCE STANDARD

10.1 APPEARANCE INSPECTION CONDITION

Visual inspection should be done under the following condition.

- (1) The inspection should be done in a dark room.
- (2) The CFL should be lighted with the prescribed inverter.
- (3) The distance between eyes of an inspector and the LCD module is 25cm.
- (4) The viewing zone is shown the figure.

10.2 DEFINITION OF ZONE

- A zone : The dots area specified at page 9-1/1 of this document.
- B zone : Area between the effective display area line and the dots area (A zone) line specified at page 9-1/1 of this document.

#### 10.3 APPEARENCE SPECIFICATION (1)LCD APPEARANCE

#### 11. PRECAUTION IN DESIGN

- 11.1 LC DRIVING VOLTAGE (V CON) AND VIEWING ANGLE RANGE Setting VCON out of the recommended condition will be A cause for A change of view ing Angle range.
- 11.2 PRECAUTIONS AGAINST ELECTROSTATIC DISCHARGE As this module contains C-MOS LSIs, it is not strong against electrostatic discharge. Make certain that the operator's body is connected to the ground through a list band etc.

And don't touch I/F pins directly.

11.3 POWER ON SEQUENCE Input signals should not be applied to LCD module before power supply voltage is applied and reaches to specified voltage (3.0± 0.15V). If the above sequence is not kept, C-MOS LSIs of LCD module may be damaged due to latch up phenomenon.

#### 11.4 HANDLING PRECAUTIONS

(1) Since the polarizer on the top, and the aluminum plate on the bottom tend to be easily damaged, they should be with full care so as not to get them touched, pushed or rubbed by a piece on glass, tweezers and anything else which are harder a pencil lead 3H.

(2) As the adhesives used for adhering upper/lower polarizers and aluminum plate are made of organic substances which will be deteriorated by a chemical reaction with such chemicals as acetone, tuluene, ethanole and isopropylalcohol. The following are recommended for use: Normal hexane Please contact us when is it is necessary for you to use chemicals other than The above.

(3) Lightly wipe to clean the dirty surface with absorbent cotton or other soft material like chamois, soaked in the recommended chemicals without scrubbing it hardly.Always wipe the surface horizontally or vertically. Never give a wipe in a circle.

To prevent the display surface from damage and keep the appearance in good state, it is sufficient, in general, to wipe it with absorbent cotton.

- (4) Immediately wipe off saliva or water drop attached on the display area because it may cause deformation or faded color.
- (5) Fogy dew deposited on the surface may cause a damage, stain or dirt to the polarizer.

When you need to take out the LCD module from some place at low temperature for test, etc.

It is required to be warmed them up to temperature higher than room temperature before taking them out.

- (6) Touching the display area or I/F pins with bare hands or contaminating them are prohibited, because the stain on the display area and poor insulation between terminals are often caused by being touched with bare hands. (Some cosmetics are detrimental to polarizers.)
- (7) In general, the glass is fragile so that, especially on its periphery, tends to be cracked or chipped in handling. Please not give the LCD module sharp shocks by falling etc.
- (8) Maximum pressure to the surface must be less than  $1.96 \times 10^4$  Pa. And if the pressure area is less than  $1 \text{ cm}^2$ , maximum pressure must be less than 1.96N.
- (9) Since the metal width is narrow on these locations (see page 9-1/1), please careful with handling.
- (10) Top sheets shall be cleaned gently using a soft cloth such as those used for glasses.Hard wiping accumulated dust will leave scars on the surface even using a cloth.

#### 11.5 OPERATION PRECAUTION

- Using a LCM module beyond its maximum ratings may result in its permanent destruction.
  LCM module's should usually be used under recommended operating conditions shown in chapter 5. Exceeding any of these conditions may adversely affect its reliability.
- (2) Response time will be extremely delayed at lower temperature than the specified operating temperature range and on the other hand LCD's shows dark blue at higher temperature.How ever those phenomena do not mean defects of the LCD module. Those phenomena will disappear in the specified operating temperature range.
- (3) If the display area is pushed hard during operation, some display patterns will be abnormally display.
- (4) A slight dew depositing on terminals may cause electrochemical reaction which leads to terminal open circuit. Please operate the LCD module under the relative condition of 40°C 85%RH.
- (5) Since STN-LCD is sensitive for heat please consider the heat profession from any Heat sources like inverter, DC/DC converter, CPU and so on.

#### 11.6 STORAGE

In case of storing LCD module for a long period of time (for instance, for years) for The purpose of replacement use, the following precautions necessary.

- (1) Storage in a polyethylene bag with the opening sealed so as not to enter fresh air outside in it, and with no desiccant.
- (2) Placing in dark place where neither exposure to direct sunlight nor light is,keeping temperature In the range from 0°C and 35°C.
- (3) Storing with no touch on polarizer surface by anything else.(It is recommended to store them as they have been contained in the inner container at the time of delivery from us.)

#### 11.7 SAFETY

The LCD modules include Cold Cathode Fluorescent Lamp(CFL). CFL contains a small amount of mercury. Please follow local ordinances or regulations for disposal.

Wear finger cots or gloves whenever handling or assembling a touch panel its Glass edges are sharp.

# 12. DESIGNATION OF LOT MARK

#### 12.1 LOT MARK

Lot mark is consisted of 4 digits for production lot and 6 or 7 digits for production control.

Year	Figure in
	lot mark
2001	1
2002	2
2003	3
2004	4
2005	5

Month	Figure in lot mark	Month	Figure in lot mark
Jan.	01	July	07
Feb.	02	Aug.	08
Mar.	03	Sep.	09
Apr.	04	Oct.	10
May	05	Nov.	11
June	06	Dec.	12

#### 13. PRECAUTIPON FOR USE

- (1) A limit sample should be provided by the both parities on an occasion when the both parties agree to its necessity. Judgement by a limit sample shall take effect after the limit sample has been established and confirmed by the both parties.
- (2) On the following occasions, the handling of the problem should be decided through discussion and agreement between responsible persons of the both parties.
  - (1) When a question is arisen in the specifications.
  - (2) When a new problem is arisen which is not specified in this specifications.
  - (3) When an inspection specifications change or operating condition change by customer is reported to HITACHI, and some problem is arisen in the specification due to the change.
  - (4) When a new problem is arisen at the customer's operating set for sample evaluation.
- (3) Regarding the treatment for maintenance and repairing, both parties will discuss it in six month later after latest delivery of this product.

The precaution that should be observed when handling LCM have been explained above.

If any points are unclear or if you have any requests, please contact HITACHI.
