## 4. ABSOLUTE MAXIMUM RATINGS

4.1 ELECTRICAL ABSOLUTE MAXIMUM RATINGS OF LCD VSS=0V

| ITEM | SYMBOL | MIN. | MAX. | UNIT | COMMENT |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Power Supply for Logic | VDD | -0.3 | 4.0 | V |  |
| Input Voltage | VI | -0.2 | VDD +0.2 |  | (Note 1) |
| Input Current | Ii | 0 | 1 | A |  |
| Static Electricity | VESD0 | - | $\pm 100$ | V | (Note 2,3) |
|  | VESD1 | - | $\pm 8$ | kV | (Note 2,4) |

Note 1 : DTMG,DCLK,RD0~RD5,GD0~GD5,BD0~BD5.
Note 2 : $200 \mathrm{pF}-250 \Omega 25^{\circ} \mathrm{C}-70 \% \mathrm{RH}$
Note 3 : Interface Pin Connector.
Note 4 : The surface of metal bezel and LCD panel.
4.2 ENVIRONMENTAL ABSOLUTE MAXIMUM RATINGS

| 1 T E M | OPERATING |  | STORAGE |  | COMMENT |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | MIN. | MAX. | MIN. | MAX. |  |
| Temperature | (-20) | (70) | (-30) | (80) | (Note 2,3,6,7,8,10,12) |
| Humidity | (Note 1) |  | (Note 1) |  | Without condensation |
| Vibration | - | $\begin{gathered} 4.9 \mathrm{~m} / \mathrm{s}^{2} \\ (0.5 \mathrm{G}) \end{gathered}$ | - | $\begin{aligned} & 19.6 \mathrm{~m} / \mathrm{s}^{2} \\ & (2 \mathrm{G}) \\ & \text { (Note 5) } \end{aligned}$ | (Note 4) |
| Shock | - | $\begin{gathered} 29.4 \mathrm{~m} / \mathrm{s}^{2} \\ (3 \mathrm{G}) \end{gathered}$ | - | $\begin{gathered} \hline 490 \mathrm{~m} / \mathrm{s}^{2} \\ (50 \mathrm{G}) \\ \text { (Note 5) } \\ \hline \end{gathered}$ | XYZ directions (Note 9) |
| Corrosive Gas | Not Acceptable |  | Not Acceptable |  |  |
| CFL Life Time | $\begin{array}{c\|} 50,000 \mathrm{~h} \\ \text { (Average) (Note 11) } \\ \hline \end{array}$ |  | - |  | At $25^{\circ} \mathrm{C}, \mathrm{IL}=4.0 \mathrm{~mA}$ max. |

Note 1 : $\mathrm{Ta} \leqq 40^{\circ} \mathrm{C}: 85 \% \mathrm{RH}$ max.
$\mathrm{Ta}>40^{\circ} \mathrm{C}$ :Absolute humidity must be lower than the humidity of $85 \% \mathrm{RH}$ at $40^{\circ} \mathrm{C}$.
Note 2 : For storage condition Ta at $-30^{\circ} \mathrm{C}<48 \mathrm{~h}$, at $80^{\circ} \mathrm{C}<100 \mathrm{~h}$.
For operating condition Ta at $-20^{\circ} \mathrm{C}<100 \mathrm{~h}$
Note 3 : Background color changes slightly depending on ambient temperature.
This phenomenon is reversible.
Note $4: 5 \mathrm{~Hz} \sim 100 \mathrm{~Hz}$ (Except resonance frequency)
Note 5 : This LCM will resume normal operation after finishing the test.
Note 6: The response time will be slower at low temperature.
Note 7 : Only operation is guarantied at operating temperature. Contrast, response time, another display quality are evaluated at $+25^{\circ} \mathrm{C}$.
Note 8 : When LCM is operated over $60^{\circ} \mathrm{C}$ ambient temperature, the ICFL of LCM should be adjusted to 3mA max.
Note 9 : Pulse Width: 10 ms
Note 10 : This is panel surface temperature, not ambient temperature.
Note 11 : When brightness reached $50 \%$ of initial brightness.
Note 12 : When LCM be operated less than $0^{\circ} \mathrm{C}$, the life time of CFL will be reduced. The rise time of CFL ON will be longer when the ambient temperature below $0^{\circ} \mathrm{C}$ and confirming the characteristics of inverter is necessary.

## 5. ELECTRICAL CHARACTERISTICS

5.1 ELECTRICAL CHARACTERISTICS OF LCD
$\mathrm{Ta}=25^{\circ} \mathrm{C}, \mathrm{VSS}=0 \mathrm{~V}$

| I T E M | SYMBOL | CONDITION | MIN. | TYP. | MAX. | UNIT |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Power Supply Voltage | VDD | - | 3.0 | 3.3 | 3.6 | V |
| Input Voltage for Logic <br> (Note 1) | VI | "H" level | 2.0 | - | VDD | V |
|  |  | "L" level | VSS | - | 0.8 |  |
| Power Supply Current <br> (Note 2) | IDD | VDD-VSS=3.3V | - | 150 | - | mA |
| Vsync Frequency | fV | - | 52 | 60 | 68 | Hz |
| Hsync Frequency | fH | - | 13.1 | 15.2 | 17.7 | kHz |
| DCLK Frequency | fCLK | - | 4.85 | 5.85 | $(7.0)$ | MHz |

Note 1 : DTMG,DCLK, RD0~RD5,GD0~GD5,BD0~BD5.
Note 2: $\mathrm{fV}=60 \mathrm{~Hz}, \mathrm{Ta}=25^{\circ} \mathrm{C}$, Pattern used as display pattern : All Black.
Note 3: Need to make sure of flickering and rippling of display when setting the frame frequency in your set.
5.2 ELECTRICAL CHARACTERISTICS OF BACKLIGHT

| ITEM | SYMBOL | MIN. | TYP. | MAX. | UNIT | NOTE |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: |
| Lamp Voltage | VL | - | 760 | - | Vrms | $\mathrm{Ta}=25^{\circ} \mathrm{C}$ |
| Frequency | fL | - | 55 | - | kHz |  |
| Lamp Current (1Lamp)(Note 6) | IL | 3.0 | 4.0 | 6.0 | mA | $\mathrm{Ta}=25^{\circ} \mathrm{C}$ |
| Starting Discharge Voltage | VS <br> (Note 2) | 1300 | - | - | Vrms | $\mathrm{Ta}=5^{\circ} \mathrm{C}$ |

Note 1 : Please design your lamp driving circuit (inverter) according to the above specifications, and inform HITACHI about it.
Note 2 : Starting discharge voltage is increased when LCM is operating under low temperature.
Please check the characteristics of your inverter before applying to your set.
Note 3: Average life time of CFL will be decreased when LCM is operating under low temperature.
Note 4 : Under lower driving frequency of an inverter, a certain Backlight system (CFL \& CFL reflection sheet) may generate a sound noise. Before designing the inverter, please consider the driving frequency and noise.
Note 5: When IL is over 6.0 mA , it may cause uneven contrast near CFL location, due to heat dispersion from CFL.
Note 6: We recommend to equip protection circuit (To stop output) which works under abnormal operation to the inverter for CFL
6. OPTICAL CHARACTERISTICS
6.1 OPTICAL CHARACTERISTICS OF LCD $\mathrm{Ta}=25^{\circ} \mathrm{C}$ (Backlight on)

| ITEM |  | SYMBOL | CONDITION | MIN. | TYP. | MAX. | UNIT | NOTE |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Viewing Area |  | $\theta \mathrm{x}$ | $\phi=0^{\circ}, \mathrm{K} \geqq 5.0$ | - | 65 | - | deg | 1~5 |
|  |  | $\theta x^{\prime}$ | $\phi=180^{\circ}, \mathrm{K} \geqq 5.0$ | - | 65 | - | deg | 1~5 |

| :--- | :--- | :--- | :--- | :--- | :--- | :--- |

### 6.2 OPTICAL CHARACTERISTICS OF BACKLIGHT

| ITEM | MIN. | TYP. | MAX. | UNIT | NOTE |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Brightness | - | $(600)$ | - | $\mathrm{cd} / \mathrm{m}^{2}$ | $\mathrm{IL}=4.0 \mathrm{~mA}$ (Note 1,2) |
| Rise Time | - | 3 | - | Minute | $\mathrm{IL}=4.0 \mathrm{~mA}$ <br> Brightness $80 \%$ |
| Brightness Uniformity | - | - | $\pm 25$ | $\%$ | Under mentioned <br> (Note 1,3) |

(Measurement condition : HITACHI standard)
CFL: Oh operation, $\mathrm{Ta}=25^{\circ} \mathrm{C}$
Display data should all be "ON"

Note 1: Measurement after 10 minutes from CFL operating.
Average value of 9 points (Note 3)
Note 2 : Brightness control: 100\%.
Note 3: Measurement of the following 9 places on the display.

Note 4 : Definition of the brightness tolerance.

## 7.BLOCK DIAGRAM

## 8.INTERFACE TIMING

### 8.1 INTERFACE TIMING

Note : Vsync Cycle No. should be set to odd.

| KAOHSIUNG HITACHI <br> ELECTRONICS CO.,LTD. | DATE | Mar. 15,'06 | Sh. <br> No. | 7B64PS 2708-TX14D11VM1CBB-1 | PAGE | $8-1 / 5$ |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |

8.2 Timing Chart
(Data is latched negative edge trigger of DCLK)

Note 1: DTMG is definition of the above timing for Hsync and Vsync.
Note 2: No matter when Hsync and Vsync is inputted, this LCM can be driven only DTMG Signal. DTMG should be set to low level when it is not input valid data.
 7B64PS 2708-TX14D11VM1CBB-1

PAGE

### 8.3 POWER ON/OFF SEQUENCE

Note 1: $0 \mathrm{~V} \leqq \mathrm{VI}(\mathrm{t}) \leqq \mathrm{VDD}(\mathrm{t})$
$\mathrm{VI}(\mathrm{t})$ and $\mathrm{VDD}(\mathrm{t})$ is a surfeit of condition for power on/off.
Note 2 : Input Voltage(Signal) should not be set high impedance when power on.

### 8.4 RELATIONSHIP BETWEEN DISPLAYED COLOR AND INPUT DATA

|  | $\begin{gathered} \hline \text { COLOR \& } \\ \text { GRAY } \\ \text { SCALE } \\ \hline \end{gathered}$ | $\begin{aligned} & \text { GRAY } \\ & \text { SCALE } \\ & \text { LEVELS } \end{aligned}$ | DATA SIGNAL |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |

## 9. DIMENSIONAL OUTLINE

## 10. APPEARANCE STANDARD

### 10.1 APPEARANCE INSPECTION CONDITION

Visual inspection should be done under the following condition.
(1) The inspection should be done in a dark room.(More than 1000 ( Ix ) and non-directive)
(2) The distance between eyes of an inspector and the LCD module is 30 cm .
(3) The viewing zone is shown the figure.

The $\theta$ is defined as $\theta \leqq 45^{\circ}$ for LCM power off
$\theta \leqq 5^{\circ}$ for LCM power on

### 10.2 DEFINITION OF ZONE

Display area (pixel area)

### 10.3 APPEARANCE SPECIFICATION

(1)LCD Appearance
*) If the problem related to this section occurs about this item, the responsible persons of both party (Customer and HITACHI) will discuss the matter in detail.

(2) CFL BACKLIGHT APPEARANCE

| C |  |  | $2.5<\mathrm{L}$ | None |  |
| K |  | $0.2<W$ | - | none |  |
| L | Scratches | Width W(mm) | Length L(mm) | Maximum number acceptable | A |
| G |  | $\mathrm{W} \leqq 0.1$ | - | ignored |  |
| H |  | $0.1<\mathrm{W} \leqq 0.2$ | $\mathrm{L} \leqq 11.0$ | 1 |  |
| T |  |  | $11.0<$ L | None |  |
|  |  | $0.2<\mathrm{W}$ | - | none |  |

Note 1 : Definition of average diameter (D)

$$
D=\frac{a+b}{2}
$$

Note 2 : Definition of length (L) and width (W)

Note 3 : Definition of dot defect
(a) Dot Defect: Defect Area $>1 / 2$ dot
(b) Sparkle mode : Brightness of dot is more than $30 \%$ at Black raster.
(c) Black mode : Brightness of dot is less than $70 \%$ at R.G.B raster.
(d) 1 dot : Defect dot is isolated, not attached to other defect dot.
(e) $N$ dot: $N$ defect dots are consecutive (fig.1).
( N means the number of defect dots.)
( fig .1)

2 dots defect included defect dot " $X$ " is defined as follows.
Adjacent dots to defect dot " $X$ " :
(f) Counting definition of adjacent dots (1 set) : same as 1 dot defect.
(g) Those wiped out easily are acceptable.

## 11. PRECAUTION IN DESIG

11.1 PRECAUTIONS AGAINST ELECTROSTATIC DISCHARGE As this module contains C-MOS LSIs, it is not strong against electrostatic discharge. Make certain that the operator's body is connected to the ground through a list band, etc. And don't touch I/F pins directly.

### 11.2 HANDLING PRECAUTIONS

(1) As the adhesives used for adhering upper/lower polarizer's and frame are made of organic substances which will be deteriorated by a chemical reaction with such chemicals as acetone, toluene, ethanol and isopropyl alcohol. The following are recommended for use :
normal hexane
Please contact with us when it is necessary for you to use chemicals other than the above.
(2) Lightly wipe to clean the dirty surface with absorbent cotton or other soft material like chamois, soaked in the recommended chemicals without scrubbing it hardly. Always wipe the surface horizontally or vertically. Never give a wipe in a circle. To prevent the display surface from damage and keep the appearance in good state, it is sufficient, in general, to wipe it with absorbent cotton.
(3) Immediately wipe off saliva or water drop attached on the display area because it may cause deformation or faded color.
(4) Fogy dew deposited on the surface may cause a damage, stain or dirt to the polarizer.
When you need to take out the LCD module from some place at low temperature for test, etc.
It is required to be warmed them up to temperature higher than room temperature before taking them out.
(5) Touching the display area or I/F pins with bare hands or contaminating them are prohibited, because the stain on the display area and poor insulation between terminals are often caused by being touched with bare hands.
(Some cosmetics are detrimental to polarizer's.)
(6) In general, the glass is fragile so that, especially on its periphery, tends to be cracked or chipped in handling. Please not give the LCD module sharp shocks by falling, etc.
(7) Maximum pressure to the surface must be less than $1.96 \times 10^{4} \mathrm{~Pa}$.

And if the pressure area is less than $1 \mathrm{~cm}^{2}$, maximum pressure must be less than 1.96 N .
(8) Since the metal width is narrow on these locations (see page $9-1 / 2$ ), please careful with handling.
(9) Top sheets shall be cleaned gently using a soft cloth such as those used for glasses. Hard wiping accumulated dust will leave scars on the surface even using a cloth.
$\square$

### 11.3 OPERATION PRECAUTION

(1) Using a LCM module beyond its maximum ratings may result in its permanent destruction.
LCM module's should usually be used under recommended operating conditions shown in chapter 4. Exceeding any of these conditions may adversely affect its reliability.
(2) Response time will be extremely delayed at lower temperature than the specified operating temperature range and on the other hand LCD's shows dark blue at higher temperature.
However those phenomena do not main defects of the LCD module. Those phenomena will disappear in the specified operating temperature range.
(3) If the display area is pushed hard during operation, some display patterns will be abnormally display.
(4) A slight dew depositing on terminals may cause electrochemical reaction which leads to terminal open circuit. Please operate the LCD module under the relative condition of $40^{\circ} \mathrm{C} 85 \% \mathrm{RH}$.
11.4 STORAGE

In case of storing LCD module for a long period of time (for instance, for years) for the purpose of replacement use, the following precautions necessary.
(1) Store the LCD modules in a dark place; do not expose them to sunlight or ultraviolet rays.
(2) Keep the temperature between $10^{\circ} \mathrm{C}$ and $35^{\circ} \mathrm{C}$ at normal humidity.
(3) Store the LCD modules in the container which is used for shipping from us.
(4) No articles shall be left on the surface over an extended period of time.

## 12. DESIGNATION OF LOT MARK

12.1 LOT MARK

Lot mark is consisted of 5 digits for production lot and 5 digits for production control.

| Year | Figure in <br> lot mark |
| :---: | :---: |
| 2006 | 6 |
| 2007 | 7 |
| 2008 | 8 |
| 2009 | 9 |
| 2010 | 0 |

| Month | Figure in <br> lot mark | Month | Figure in <br> lot mark |
| :---: | :---: | :---: | :---: |
| Jan. | 01 | Jul. | 07 |
| Feb. | 02 | Aug. | 08 |
| Mar. | 03 | Sep. | 09 |
| Apr. | 04 | Oct. | 10 |
| May | 05 | Nov. | 11 |
| Jun. | 06 | Dec. | 12 |

| Week <br> (day in calendar) | Figure in <br> lot mark |
| :---: | :---: |
| $1 \sim 7$ | 1 |
| $8 \sim 14$ | 2 |
| $15 \sim 21$ | 3 |
| $22 \sim 28$ | 4 |
| $29 \sim 31$ | 5 |

12.2 SERIAL No.

Serial No. is consisted of 5 digits number (00001~99999).

### 12.3 LOCATION OF LOT MARK

Label is bring attached on the back side of module.

Let No. \&
Production Control No.

## 13. PRECAUTION FOR USE

(1) A limit sample should be provided by the both parities on an occasion when the both parties agree to its necessity.
Judgment by a limit sample shall take effect after the limit sample has been established and confirmed by the both parties.
(2) On the following occasions, the handling of the problem should be decided through discussion and agreement between responsible persons of the both parties.
(1) When a question is arisen in the specifications.
(2) When a new problem is arisen which is not specified in this specifications.
(3) When an inspection specifications change or operating condition change by customer is reported to HITACHI, and some problem is arisen in the specification due to the change.
(4) When a new problem is arisen at the customer's operating set for sample evaluation.
(3) Regarding the treatment for maintenance and repairing, both parties will discuss it in six months later after latest delivery of this product.

The precaution that should be observed when handling LCM have been explained above.
If any points are unclear or if you have any requests, please contact with HITACHI.
