RECORD OF REVISION

Date	The upper section : Before revision The lower section : After revision		Summary
	Sheet No.	Page	

APPLICATION

In the case of applying this product for such as control and safety device of transportation facilities (airplane, train, automobile, ship, etc), equipments aiming for rescue and security, and the other safety related devices which should secure higher reliability and safety, please make it sure that proper countermeasure such as fail-safe functions and enough system design for the protection are mandatory.

Please do not apply this product for equipments or devices which need exceedingly high reliability, such as aerospace applications, telecommunication facilities (trunk lines), nuclear related equipments or plants, and critical life support devices or applications. Usage style of this product is limited to Landscape mode. Optical characteristics mentioned in this spec. sheet is applied for only initial stage after delivery, and the characteristics will be changed by long time usage. Reliability of this product is secured as normal office use.

------------------------	------	---------------	------------	----------------	------	-------

DESCRIPTION

The following specifications are applied to the following IPS-Pro-TFT module.

Note : Inverter for back light unit is not built in this module.

General Specifications

Part Name	: TX43D57VC0CAA
Effective Display Area	: H337.92 × V270.336 [mm]
Number of Pixels	: H1280 × V1024 [pixels]
Pixel Pitch	: H0.264 × V0.264 [mm]
Color Pixel Arrangement	: R+G+B Vertical Stripe
Display Mode	: Transmissive Mode Normally Black Mode
Top Polarizer Type	: Anti-glare
Number of Colors	: 16,777,216 colors
Viewing Angle Range	: Super Wide Version
Input Signal	: 2-channel LVDS (LVDS:Low Voltage Differential Signaling)
Back Light	: 4 pcs. of CCFL
External Dimensions	: H368 × V306 × t20.3 [mm]
Weight	: 2,300g max (typ 2,100g)

1. ABSOLUTE MAXIMUM RATINGS

1.1 ELECTRICAL ABSOLUTE MAXIMUM RATINGS

ITEM	Operating		Storage		Unit	Note
	Min.	Max.	Min.	Max.		
Temperature	0	50	-20	60	°C	1)
Humidity	2)		2)		%RH	1)
Vibration	—	4.9 (0.5G)	—	14.7 (1.5G)	m/s ²	3)
Shock	—	29.4 (3G)	—	490 (50G)		4)
Corrosive Gas	Not Acceptable		Not Acceptable		—	—
Illumination at LCD Surface	—	50,000	—	50,000	lx	—

Note 1) Temperature and Humidity should be applied to the center glass surface of a TFT module, not to the system installed with a module.

The temperature at the center of rear surface should be less than 60°C on the condition of operating. Function of module is guaranteed in above operating temperature range, but optical characteristics is specified for only 25°C operating condition.

The brightness of a CCFL tends to drop at low temperature. Besides, the life-time becomes shorter at low temperature.

2) $T_a \leq 40^\circ\text{C}$ Relative humidity should be less than 85%RH max. Dew is prohibited.

$T_a > 40^\circ\text{C}$ Relative humidity should be lower than the moisture of the 85%RH at 40°C.

3) Frequency of the vibration is between 15Hz and 100Hz. (Remove the resonance point)

4) Pulse width of the shock is 10 ms.

1.2 Electrical Absolute Maximum Ratings

(1) TFT Module

$V_{SS}=0V$

ITEM	SYMBOL	Min.	Max.	Unit	Note
Power Supply Voltage	V_{DD}	0	6.5	V	—
Input Voltage for logic	V_I	-0.3	3.6	V	1)
Electrostatic Durability	V_{ESD0}	±100		V	2),3)
	V_{ESD1}	±8		kV	2),4)

Note 1) It is applied to pixel data signal and clock signal.

2) Discharge Coefficient: 200pF-250Ω, Environmental: 25°C-70%RH

3) It is applied to I/F connector pins.

4) It is applied to the surface of a metallic bezel and a LCD panel.

(2) Back Light

$GND=0V$

ITEM	SYMBOL	Min.	Max.	Unit	Note
Input Current	I_L	—	8.5	mArms	1)
Input Voltage	V_L	—	1,800	Vrms	2)

Note 1) The specification shall be applied each CCFL. The specification is defined at ground line.

2) The specification shall be applied connector pins for a CCFL at start-UP.

2. OPTICAL CHARACTERISTICS

The following optical characteristics are measured when the LCD is set alone (apart from driving circuits and monitor cabinets) and under stable conditions. It takes about 30 minutes to reach stable conditions. The measuring point is the center of display area otherwise noted.

The optical characteristics should be measured in a dark room or equivalent state.

Measuring equipment: CS1000A or CA-210, EZ-contrast

Ta (ambient Temperature)=25°C, VDD=5.0V, fV=60Hz,

IL=6.5mA (average of 4 pieces of CCFLs. PWM Duty 100%)

ITEM		SYMBOL	CONDITION	Min.	Typ.	Max.	UNIT	NOTE
Contrast Ratio		CR	$\theta = 0^\circ$ 1)	600	1,000	—	—	2)
Response Time	Rise	ton		—	10	18	ms	3)
	Fall	tof		—	12	20		
Brightness of white		Bwh		210	270	—	cd/m ²	—
Brightness uniformity		Buni		75	—	—	%	4)
Color Chromaticity (CIE)	Red	x		$\theta = +30^\circ$ $\phi = 0^\circ, 90^\circ$ 180°, 270° 1)	0.615	0.645	0.675	—
		y	0.300		0.330	0.360		
	Green	x	0.265		0.295	0.325		
		y	0.570		0.600	0.630		
	Blue	x	0.112		0.142	0.172		
		y	0.030		0.060	0.090		
	White	x	0.269		0.299	0.329		
		y	0.285		0.315	0.345		
Variation of Color Position (CIE)	Red	Δx	$\theta = +30^\circ$ $\phi = 0^\circ, 90^\circ$ 180°, 270° 1)	—	—	0.04	—	〔Gray scale〕 255
		Δy		—	—	0.04		
	Green	Δx		—	—	0.04		
		Δy		—	—	0.04		
	Blue	Δx		—	—	0.04		
		Δy		—	—	0.04		
	White	Δx		—	—	0.04		
		Δy		—	—	0.04		
Contrast Ratio at 85°		CR85°	$\theta = \pm 85^\circ$	10	—	—	—	—

Note 1) Definition of Viewing Angle

2) Definition of Contrast Ratio

$$CR = \frac{\text{(Luminance at displaying WHITE)}}{\text{(Luminance at displaying BLACK)}}$$

3) Definition of Response Time

* Temperature of LCD surface=30°C

4) Definition of Brightness Uniformity

Display pattern is white (255 level). The brightness uniformity is defined as the following equation. Brightness at each point is measured, and average, maximum and minimum brightness is calculated.

$$Buni = \left(\frac{Bmin}{Bmax} \right) \times 100$$

where, Bmax = Maximum brightness
Bmin = Minimum brightness

5) Variation of color position on CIE is defined as difference between colors at $\theta = 0^\circ$ and at $\theta = 30^\circ$ & $\phi = 0^\circ, 90^\circ, 180^\circ, 270^\circ$.

3. ELECTRICAL CHARACTERISTICS

3.1 TFT-LCD Module

Ta=25°C, Vss=0V

ITEM	SYMBOL	Min.	Typ.	Max.	Unit	Note
Power Supply Voltage	V _{DD}	4.5	5.0	5.5	V	—
Power Supply Current	I _{DD}	—	780	980	mA	1),2),3)
Vsync Frequency	f _V	—	60	76 *	Hz	—
Hsync Frequency	f _H	—	64	—	kHz	—
DCLK Frequency	f _{CLK}	40	54	(81)	MHz	—

Dimensions in parentheses are reference value.

* The LCD panel works ordinarily when f_v is set between 60Hz and 76Hz.

However, picture quality and optical characteristics can be guaranteed only at f_v=60Hz.

If the LCD is used other than f_v=60Hz, customers are requested to check picture quality of the LCD under customers' specific conditions.

Note 1) DC current at f_v=60.0Hz, f_{CLK}=54MHz and V_{DD}=5.0V

2) Current capacity of power supply for V_{DD} should be larger than 5A, so that the fuse can be opened at the trouble of power supply.

3) The picture on maximum current is white picture.

3.2 Back Light

Ta=25°C

ITEM	SYMBOL	Min.	Typ.	Max.	Unit	Note
Input Current	I _L	3.0	6.5	7.5	mArms	1)
Input Voltage	V _L	—	700	—	Vrms	—
Frequency	f _L	40	56	80	kHz	2)
Kick-Off Voltage	V _s	1,500	—	1,750	Vrms	3)

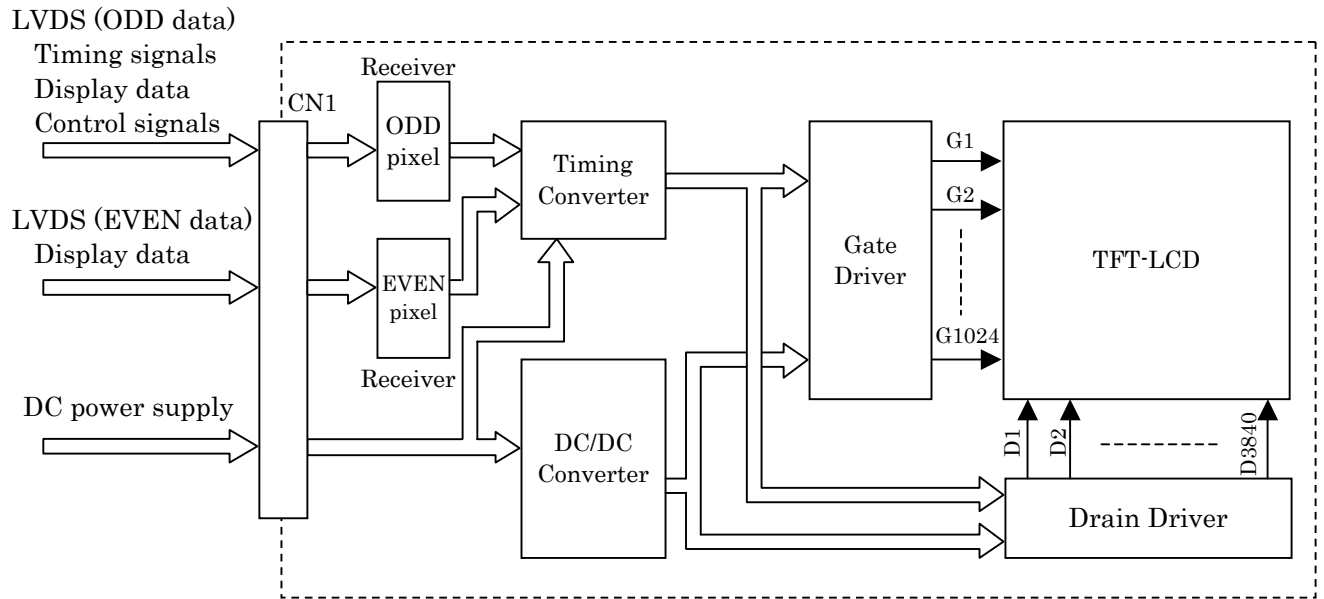

Note 1) The specification shall be applied to each CFL. The specification is defined at ground line.

2) Frequency of power supply for a CFL may cause the interference with HSYNC frequency and cause beat or flicker on the display. Therefore, lamp frequency shall be as different as possible from HSYNC frequency in order to avoid the interference.

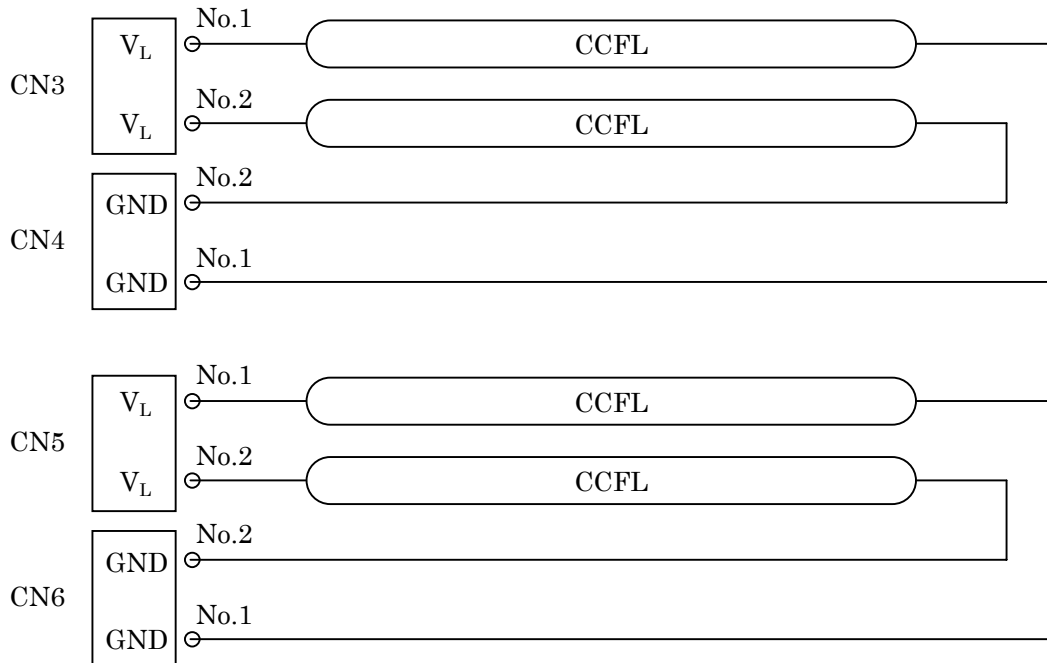

3) Ta=0°C

Horizontal Active Display Term	Display Period	t _{HD}	640	640	640	clocks	

Dimensions in parentheses are reference value.

6.3 TIMING BETWEEN INTERFACE SIGNALS AND POWER SUPPLY

Power supply voltage V_{DD}

Timing of power supply voltage and input signals should be used under the following specifications.

$$\begin{aligned}
 0\text{ms} &\leq TPR \leq 10\text{ms} \\
 10\text{ms} &\leq TDR \leq 50\text{ms} \\
 0\text{ms} &\leq TDF \leq 50\text{ms} \\
 TIN &\geq 1\text{s} \\
 TBR &\geq 500\text{ms} \\
 TBF &\geq 100\text{ms}
 \end{aligned}$$

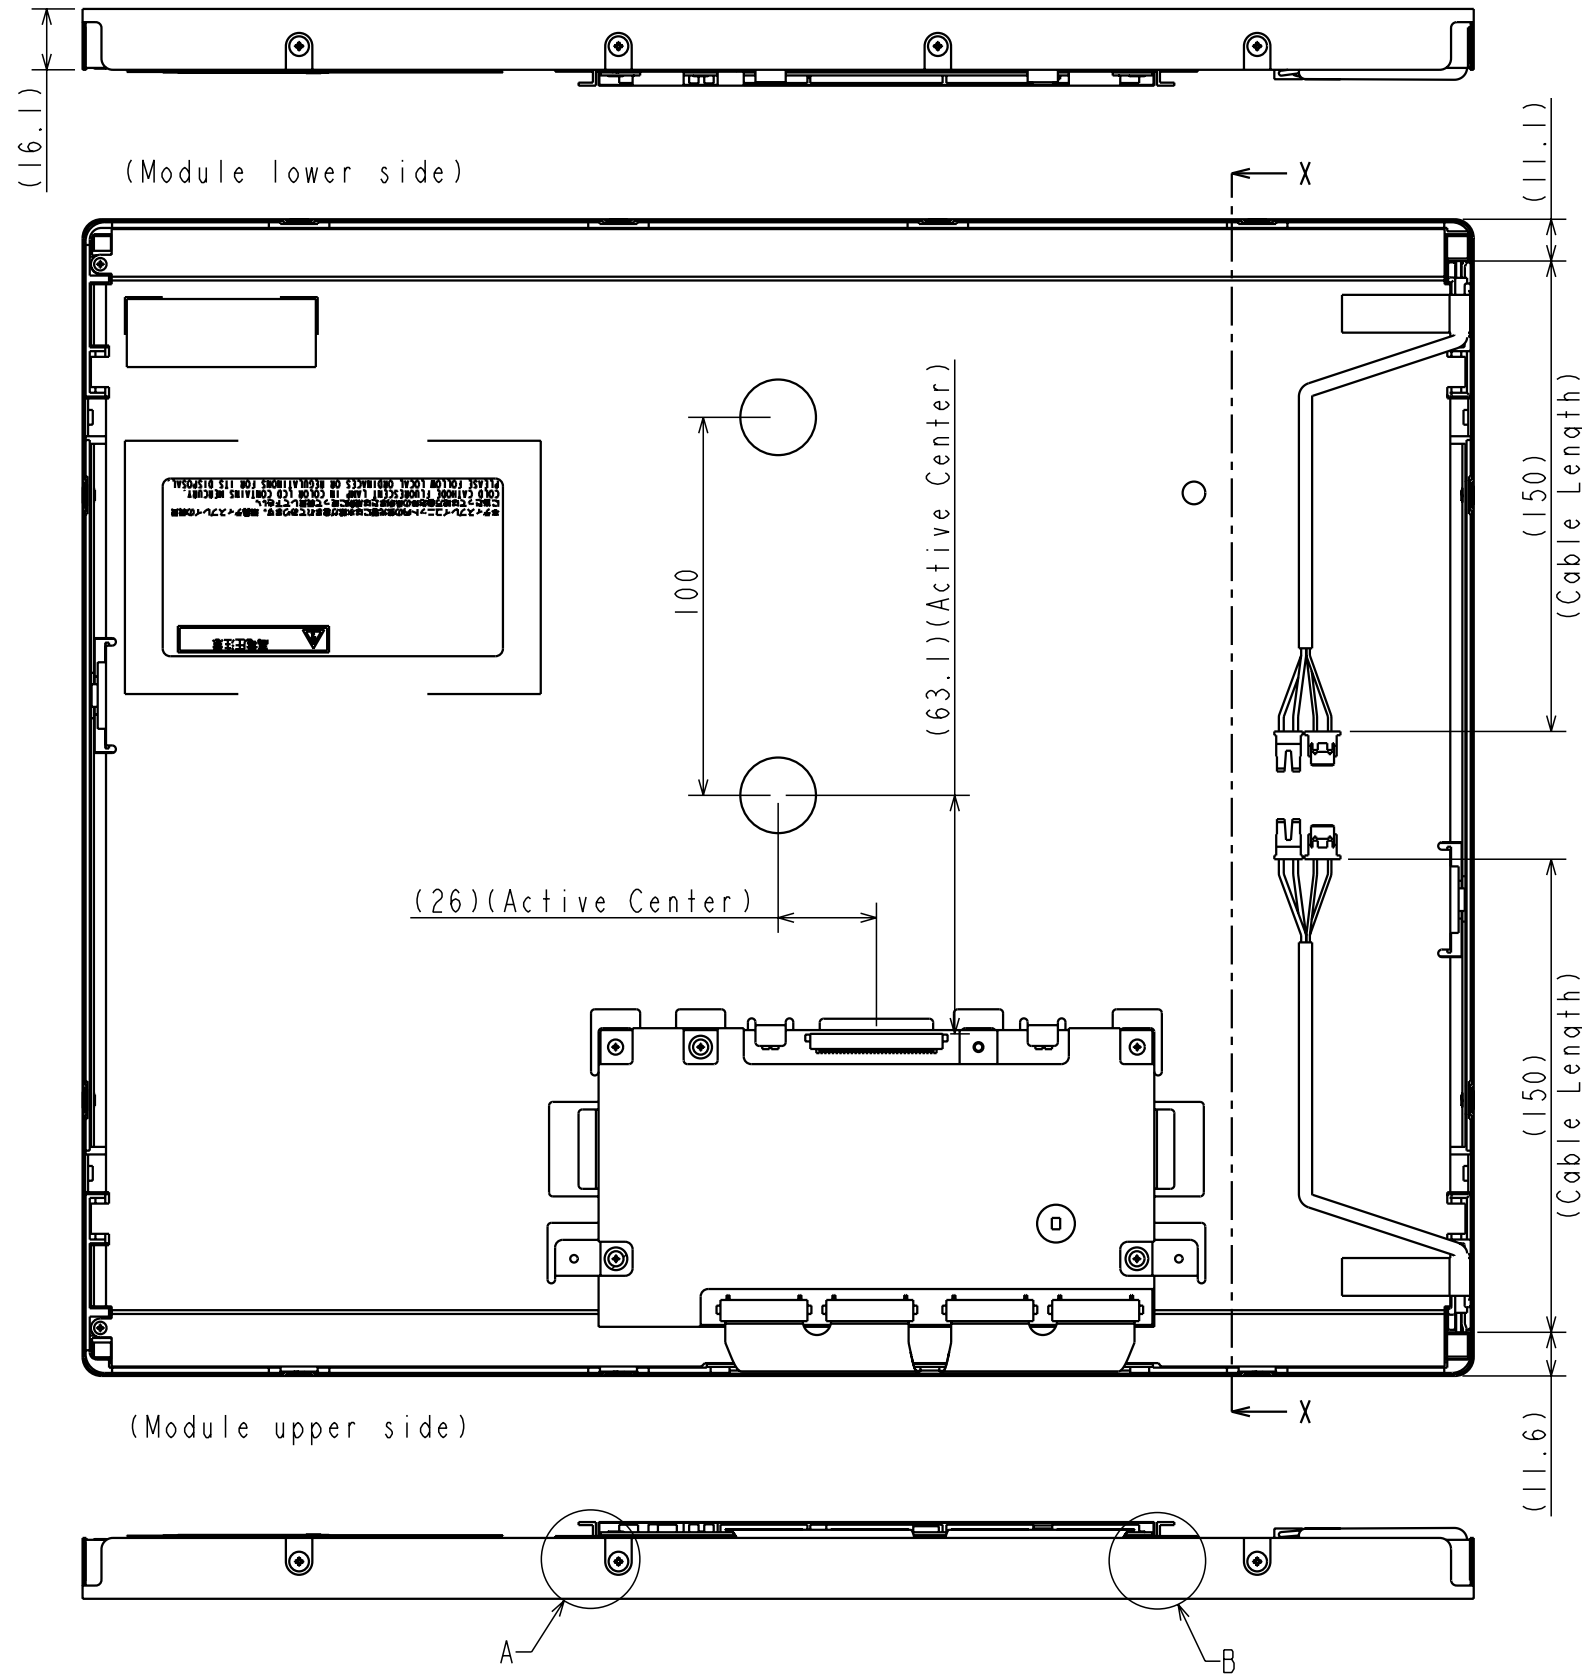

7. Dimensional Outline
 (1) Front View

- Note 1) Dimension in parentheses are reference value.
 2) Tolerance not specified is +/-0.5mm.
 3) Measure the thickness with $9.8 \times 10^4 \text{ Pa}$ (1 kgf/cm^2) Pressure.
 4) Maximum torque for the screw in mounting module: 0.392N·m.

8. DESIGNATION OF LOT MARK

8.1 LOT MARK

Notes

1)

Year	Mark
2006	6
2007	7
2008	8
2009	9
2010	0

2)

Month	Mark	Month	Mark
1	01	7	07
2	02	8	08
3	03	9	09
4	04	10	10
5	05	11	11
6	06	12	12

3)

Week (Days)	Mark
1~7	1
8~14	2
15~21	3
22~28	4
29~31	5

4) It is the mark that was opened up by production person to take correspondence with production number.

8.2 Revision (REV.) control

REV. is the column for manufacturing convenience. A-Z except I and O may be written on this column.

8.3 Location of lot mark

Lot mark is printed on a label. The label is on the metallic bezel as shown in 7. External Dimensional. The style of character will be changed without notice.

9. COSMETIC SPECIFICATIONS

9.1 CONDITIONS FOR COSMETIC INSPECTION

(1) Viewing zone

- a) The figure shows the correspondence between eyes (of inspector) and TFT-LCD module.
 $\theta < 45^\circ$: when non-operating inspection
 $\theta < 5^\circ$: when operating inspection
- b) Inspection should be executed only from front side and only A-zone.
 Cosmetic of B-zone and C-zone are ignore.
 (refer to 9.2 DEFINITION OF ZONE)

(2) Environmental

- a) Temperature : 25°C
- b) Ambient light : about 700 lx and non-directive when operating inspection.
 : about 1000 lx and non-directive when non-operating inspection.
- c) Back-light : when non-operating inspection, back-light should be off.

9.2 DEFINITION OF ZONE

- A-zone : Display area (pixel area).
- B-zone : Area between A-zone and C-zone.
- C-zone : Metal bezel area.
(Include I/F connector)

9.3 COSMETIC SPECIFICATIONS

When displaying conditions are not stable (ex. at turn on or off), the following specifications are not applied.

	No.	Item		Max. acceptable number		Unit	Note

4	Stain inclusion (Line shape W: width (mm) L: length (mm))	W ≤ 0.1	L < 1.0	3	pcs	6)		
			L ≥ 1.0	0				
5	Stain inclusion (Dot shape D: ave. dia. (mm))	D ≤ 0.3		Ignore	pcs	6)		
		D ≤ 0.4		4				
		0.4 < D ≤ 0.5		3				
		D > 0.5		0				
6	Scratch on polarizer (Line shape W: width (mm) L: length (mm))	W ≤ 0.02	L: Ignore	Ignore	pcs	7)		
		W ≤ 0.04	L ≤ 40	8				
			L > 40	0				
		W ≤ 0.1	L ≤ 10	8				
			L > 10	0				
		W > 0.1	—	0				
7	Scratch on polarizer (Dot shape D: ave. dia. (mm))	D ≤ 0.2		Ignore	pcs	7)		
		D ≤ 0.6		8				
		D > 0.6		0				

	No.	Item	Max. acceptable number A-zone	Unit	Note	
non- operating inspection	8	Bubbles, peeling in polarizer [D: ave. dia. (mm)]	$D \leq 0.3$	Ignore	pcs	7)
			$D \leq 0.5$	8		
			$D \leq 1.0$	4		
			$D > 1.0$	0		
	9	Wrinkles on polarizer	Serious one is not allowed.	—	—	

Notes 1) Sparkle mode : brightness of dot is more than 30% at black. (visible to eye)

2) Black mode: brightness of dot is less than 70% at white. (visible to eye)

3) 1 dot: defect dot is isolated, not attached to other defect dot.

4) N dots: N defect dots are consecutive. (N means the number of defects dots)

A sequence of defective dots is regarded as one piece (unit: pcs)

5) Density: number of defect dots inside 15mm ϕ .

6) Those stains which can be wiped out easily are acceptable.

7) Polarizer area inside of B-zone is not applied.

10. PRECAUTION

Please pay attention to the followings when a TFT module with a back-light unit is used, handled and mounted.

10.1 PRECAUTION TO HANDLING AND MOUNTING

- (1) Applying strong force to a part of the module may cause partial deformation of frame or mold, and cause damage to the display.
To prevent damage of the electronic components on the interface board, the module must be handled with due care to avoid pressure or deforming the interface board arranged on the back of the module. Never place the module on rough surface.
- (2) The module should gently and firmly be held by both hands. Never hold by just one hand in order to avoid any internal damage. Never drop or hit the module.
- (3) The module should be installed with mounting holes of a module.
- (4) Uneven force such as twisted stress should not be applied to a module when a module is mounted on the cover case. The cover case must have sufficient strength so that external force can not be transmitted directly to a module.
- (5) It is recommended to leave a space between a module and a holding board of a module so that partial force is not applied to a module.

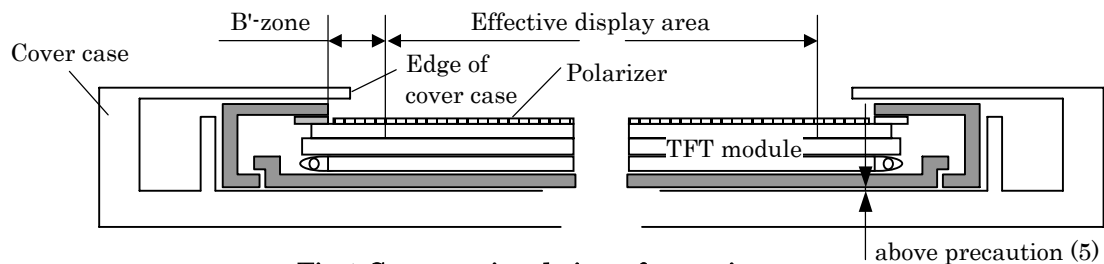

Fig.1 Cross sectional view of a monitor set

- (6) The edge of a cover case should be located inside more than 1mm from the edge of a module front frame.
- (7) Materials included acetic acid and chlorine should not be used for a cover case as well as other parts and boards near a module. Acetic acid attacks a polarizer. Chlorine attacks electric circuits due to electro-chemical reaction.
- (8) The polarizer on a TFT cell should carefully be handled due to its softness, and should not be touched, pushed or rubbed with glass, tweezers or anything harder than HB pencil lead. The surface of a polarizer should not be touched and rubbed with bare hand, greasy cloths or dusty cloths.
- (9) The surface of a polarizer should be gently wiped with absorbent cotton, chamois or other soft materials slightly contained petroleum benzene when the surface becomes dirty. Isopropyl alcohol as cleaning chemicals is recommended in order to clean adhesives which fix front/rear polarizers on a TFT cell. Other cleaning chemicals such as acetone, toluene and Normal-hexane should not be used to clean adhesives because they cause chemical damage to a polarizer.
- (10) Saliva or water drops should be immediately wiped off. Otherwise, the portion of a polarizer may be deformed and its color may be faded.
- (11) The module should not be disassembled or modified. It may cause not to operate properly. If the module is once disassembled or modified, warranty of the module becomes invalid and Hitachi doesn't guarantee its quality and reliability.
- (12) Metallic bezel of a module should not be handled with bare hand or dirty gloves. Otherwise, color of a metallic frame may become dirty during its storage period. It is recommended to use clean soft gloves and clean finger stalls when a module is handled at incoming inspection process and production (assembly) process.
- (13) Lamp (CCFL) cables should not be pulled and held.

10.2 PRECAUTION TO OPERATION

- (1) The ambient temperature near the operated module should be satisfied with the absolute maximum ratings. Unless it meets the specifications, sufficient cooling system should be adopted to system.
- (2) Noise spikes can cause miss-operation of a module. The level of noise spike should be as follows: $-200\text{mV} \leq \text{over- and under- shoot of VDD} \leq +200\text{mV}$
VDD including over- and under- shoot should be satisfied with the absolute maximum ratings.
- (3) Optical response time, luminance and chromaticity depend on the temperature of a TFT module. Response time and saturation time of CCFL luminance become longer at lower temperature operation.
- (4) Sudden temperature change may cause dew on and/or in the a module. Dew can cause damage to a polarizer and/or electrical contacting portion. Dew causes fading of picture quality.
- (5) Fixed patterns displayed on a module for a long time may cause after-image. It will be recovered soon.
- (6) A module has high frequency circuits. Sufficient suppression to electromagnetic interference should be done by system manufacturers. Grounding and shielding methods may be effective to minimize the interference.
- (7) Noise may be heard when a back-light is operated. If necessary, sufficient suppression should be done by system manufacturers.
- (8) The module should not be connected or removed while a main system works.

10.3 ELECTROSTATIC DISCHARGE CONTROL

- (1) Since a module consists of a TFT cell and electronic circuits with CMOS-ICs, which are very sensitive to electrostatic discharge, persons who are handling a module should be grounded through adequate methods such as a wrist band. I/F connector pins should not be touched directly with bare hands.
- (2) Protection film for a polarizer on a module should be slowly peeled off so that the electrostatic charge can be minimized.

10.4 PRECAUTION TO STRONG LIGHT EXPOSURE

- (1) A module should not be exposed under strong light. Otherwise, characteristics of a polarizer and color filter in a module may be degraded.

10.5 PRECAUTION TO STORAGE, PACKAGE AND TRANSPORTATION

When modules for replacement are stored for a long time, following precautions should be taken care of :

- (1) Modules should be stored in a dark place. It is prohibited to expose the module to sunlight or fluorescent light during storage. Modules should be stored at 5 to 35°C at normal humidity (60%RH or less).
- (2) The surface of polarizers should not come in contact with any other object. It is recommended that modules should be stored in the Hitachi's shipping box.
- (3) The module should not be transported when display side was downward.
It causes the breakdown of the module.

10.6 PRECAUTION TO HANDLING PROTECTION FILM

- (1) The protection film for polarizers should be peeled off slowly and carefully by persons who are electrically grounded with adequate methods such as a wrist band. Besides, ionized air should be blown over during peeling action. Dust on a polarizer should be blown off by ionized nitrogen gun and so on.
- (2) The protection film should be peeling off without rubbing it to the polarizer. Because, if the film is rubbed together with the polarizer, since the film is attached to the polarizer with a small amount of adhesive, the adhesive may remain on a polarizer.
- (3) The module with protection film should be stored on the conditions explained in 10.5 (1). However, in case that the storage time is too long, adhesive may remain on a polarizer even after a protection film is peeled off. Besides, in case that a module is stored at higher temperature and/or higher humidity, adhesive may remain on a polarizer. The remained adhesive may cause non-uniformity of display image.
- (4) The adhesive can be removed easily with Isopropyl alcohol. The remained adhesive or its vestige on the polarizer should be wiped off with absorbent cotton or other soft materials such as chamois slightly contained Isopropyl alcohol.

10.7 SAFETY

- (1) Since a TFT cell and lamps are made of glass, handling to the broken module should be taken care sufficiently in order not to be injured. Hands touched liquid crystal from a broken cell should be washed sufficiently.
- (2) The module should not be taken apart during operation so that back-light drives by high voltage.

10.8 ENVIRONMENTAL PROTECTION

- (1) The TFT module contains cold cathode fluorescent lamps. Please follow local ordinance or regulations for its disposal.
- (2) Flexible circuit board and printed circuit board used in a module contain small amount of lead. Please follow local ordinance or regulations for its disposal.

10.9 USE RESTRICTIONS AND LIMITATIONS

- (1) This product is not authorized for use in life support devices or systems, military applications or other applications which pose a significant risk of personal injury.
- (2) In no event shall Hitachi Displays, Ltd., be liable for any incidental, indirect or consequential damages in connection with the installation or use of this product, even if informed of the possibility thereof in advance. These limitations apply to all causes of action in the aggregate, including without limitation breach of contract, breach of warranty, negligence, strict liability, misrepresentation and other torts.

------------------------	------	---------------	------------	----------------	------	--------

10.10 OTHERS

- (1) Electrical components which may not affect electrical performance are subjective to change without notice because of their availability.
- (2) Limited current circuit must be required for the inverter output.
- (3) SELV should be required for LCD Module power supply.
