## 1.0 Handling Precautions

- If any signals or power lines deviate from the power on/off sequence, it may cause shorten the life of the LCD module.
- The LCD panel and the CFL are made of glass and may break or crack if dropped on a hard surface, so please handle them with care.
- CMOS ICs are included in the LCD panel. They should be handled with care, to prevent electrostatic discharge.
- Do not press the reflector sheet at the LCD module to any directions.
- Do not stick the adhesive tape on the reflector sheet at the back of the LCD module.
- Please handle with care when mount in the system cover. Mechanical damage for lamp cable/lamp connector may cause safety problems.
- Small amount of materials having no flammability grade is used in the LCD module. The LCD module should be supplied by power complied with requirements of Limited Power Source (2.5, IEC60950 or UL60950), or be applied exemption conditions of flammability requirements (4.7.3.4, IEC60950 or UL60950) in an end product.
- The LCD module is designed so that the CFL in it is supplied by Limited Current Circuit (2.4, IEC60950 or UL60950).
- The fluorescent lamp in the liquid crystal display(LCD) contains mercury. Do not put it in trash that is disposed of in landfills. Dispose of it as required by local ordinances or regulations.
- Never apply detergent or other liquid directly to the screen.
- Wipe off water drop immediately. Long contact with water may cause discoloration or spots.
- When the panel surface is soiled, wipe it with absorbent cotton or other soft cloth; do not use solvents or abrasives.
- Do not touch the front screen surface in your system, even bezel.
- Gently wipe the covers and the screen with a soft cloth.

The following figure shows the internal block diagram of the LVDS receiver.

This LCD module equips termination resistors for LVDS link.

### 5.4.3 Recommended Guidelines for Motherboard PCB Design and Cable Selection

Following the suggestions below will help to achieve optimal results.

- Use controlled impedance media for LVDS signals. They should have a matched differential impedance of 100 ohm.
- Match electrical lengths between traces to minimize signal skew.
- Isolate TTL signals from LVDS signals.
- For cables, twisted pair, twin, or flex circuit with close coupled differential traces are recommended.

### Note:

1. Design Point
2. If it exceeds MIN/MAX values, then "CFL Life", "ON/OFF Cycle", and "SAFETY" will not be guaranteed.
3. CFL Frequency should be carefully determined to avoid interference between inverter and TFT LCD.
4. Calculated value for reference (ICFL x VCFL = PCFL).
5. It should be employed the inverter which has `Duty Dimming`, if ICFL is less than 4[mA].
6. Duration: 50msec MAX

The following chart is Luminance versus Lamp Current for your reference.

## 8.0 Interface Timings

Basically, interface timings should match the VESA 1024x768 / 60 Hz (VG901101) manufacturing guide line timing. These timings described here are not actual input timings of LCD module but output timings of SN75LVDS86DGG (Texas Instruments) or equivalent.
