\*In case of lower frequency, the deterioration of the display quality, flicker etc., may occur.

### 8-2. Horizontal display position

The horizontal display position is determined by ENAB signal.

ITEM		SYMBOL	MIN	TYP	MAX	UNIT	NOTE

\* When ENAB is fixed at "Low", the display starts from the data of C104 (clock) as shown in 8-5.

### 8-3. Vertical display position

The vertical display position (TVs) is fixed at 34th line. (V/Q=H)

Note) ENAB signal is independent of vertical display position.

#### 8-4. Input Data Signals and Display position on the screen

## 8-5. Input Timing Characteristics

\*1 When ENAB is fixed "Low" the display starts from the data of C104(Clock)

\*2 The vertical display position(TVs) is fixed at 34<sup>th</sup> line.

## 9. Backlight Characteristics

Temp. = 25°C

ITEM	SYMBOL	MIN.	TYP.	MAX.	NOTE
Starting discharge Voltage *1	VS	—	—	1,550 Vrms.	-10 °C
		—	—	1,035 Vrms.	25 °C
Discharging tube current *2	IL	3.0 mA rms.	4.0 mA rms.	5.0 mA rms.	—
Discharging tube voltage	VL	—	685 Vrms.	—	IL=4.0 mA rms.
Operating life *3	T	60,000 h	75,000 h	—	IL=4.0 mA rms.
Operating frequency *4	F	30 kHz	—	100 kHz	—

\*1 The Non-load output voltage (VS) of the inverter should be 1.3 times the maximum VS at the low temperature to provide margin to assure that the CFL will start, because actual VS may increase due to leakage current from the CFL cables. (Reference value: 2,015 Vrms Min.)

\*2 We recommend that you should set the discharging tube current at lower than typical value so as to prevent the heat accumulation of CFL tube from deteriorating a performance of the LCD.

\*3 End of life is defined as when the illuminance or quantity of light has decreased to 50% of the initial value. Illuminance of light will drastically decrease when LCD is operated at lower temperature for long hours.

\*4 The driving frequency of the CFL may interfere with the horizontal synchronous signal, leaving interference stripes on the display. So please evaluate LCD panels beforehand.

To avoid interference stripes, we recommend to separate as far as possible the CFL frequency from the horizontal synchronous signal and its high harmonic frequency.

\* There may be cases where interface noise on LCD PCB, generated by high-voltage products such as inverters, may leave stripes on the display. Please be careful when designing a mold to take into consideration that the inverter shall be located as far as possible from PCB. Shield protection may be effective.

\* CFL arrangement figure

## 11. Warranty

### 11-1. Incoming inspection

Please inspect the LCD within one month after your receipt.

### 11-2. Production Warranty

Kyocera warrants its LCDs for a period of 12 months after receipt by the purchaser, and within the limits specified. Kyocera shall, by mutual agreement, replace or rework defective LCDs that are shown to be Kyocera's responsibility.

## 1.2. Precautions for use

### 12-1. Installation of the LCD

1. The LCD's bezel must be grounded. The heat sink and shield cover are connected at the ground hole. The ground hole is located on the right side of the LCD when viewed from the front. The ground hole must be connected to an external ground.

2. A transparent protection sheet shall be added to protect the LCD and its polarizers.
3. The LCD shall be installed so that there is no pressure on the LSI chips.
4. The LCD shall be installed flat, without twisting or bending.
5. The display window size should be the same as the effective viewing area.
6. In case you use outside frame of effective viewing area as outward appearance of your product, unevenness of its outward appearance is out of guarantee.
7. Please refer to the following our recommendable value of Clamp-down torque when installing.  
Clamp-down torque:  $3.3 \pm 0.3 \text{kgf.cm}$  Please set up 'SPEED-LOW', 'SOFT START-SLOW' when using electric driver .  
Recommendable screw P-TITE screw nominal dia. 3.0mm  
installing boss hole depth  $3.5 \pm 0.5 \text{mm}$   
Please be careful not to use high torque which may damage LCD module in installation.
8. A transparent protection sheet is attached to the polarizer. Please remove the protection film slowly before use, paying attention to static electricity.
9. Do not pull the CFL lead wires and do not bend the root of the wires.  
Housing should be designed to protect CFL lead wires from external stress.
10. This Kyocera LCD module has been specifically designed for use in general electronic devices, but not for use in a special environment such as usage in an active gas.  
Hence, when the LCD is supposed to be used in a special environment, evaluate the LCD thoroughly beforehand and do not expose the LCD to chemicals such as an active gas.

### 12-2. Static Electricity

1. Since CMOS ICs are mounted directly onto the LCD glass, protection from static electricity is required. Operator should wear ground straps.

### 12-3. LCD Operation

1. The LCD shall be operated within the limits specified. Operation at values outside of these limits may shorten life, and/or harm display images.
2. Adjust "LCD driving voltage" to obtain optimum viewing angle and contrast.  
It may also change the characteristics of the liquid crystal.  
This phenomenon may not recover. The LCD shall be operated within the temperature limits specified.

### 12-4. Storage

1. The LCD shall be stored within normal temperature and humidity.  
Store in a dark area, and protected the LCD from direct sunlight or fluorescent light.
2. Always store the LCD so that it is free from external pressure onto it.

12-5. Caution items when handling the LCD.

1. DO NOT store in a high humidity environment for extended periods.  
Image degradation, bubbles, and/or peeling off of polarizer may result.
2. The front polarizer is easily scratched or damaged.  
Prevent touching it with any hard material, and from being pushed or rubbed.
3. The LCD screen may be cleaned with a soft cloth or cotton pad.  
Methanol, or Isopropyl Alcohol may be used, but insure that all solvent residue is removed.
4. Water may cause damage or discoloration of the polarizer.  
Clean any condensation or moisture from any source immediately.
5. Always keep the LCD free from condensation during testing.  
Condensation may permanently spot or stain the polarizers.
6. Do not disassemble LCD module because it will result in damage.
7. Please do not use solid-base image pattern for long hours because a temporary afterimage may appear. We recommend to use screen saver etc. in cases where a solid-base image pattern must be used.
8. Liquid crystal may leak when the module is broken. Be careful not to let the fluid go into your eyes and mouth. In the case the fluid touches your body, rinse it off right away with water and soap.

\* The LCD is tested in circumstances in which there is no condensation.

\* The tested LCD is inspected after 24 hours of storage at room temperature and room humidity after each test is finished.

\* The reliability test is not an out-going inspection.

\* The results of the reliability test are for your reference purpose only.  
The reliability test is conducted only to examine the LCD's capability.
