# Warning

- 1. This Kyocera LCD module has been specifically designed for use only in electronic devices and industrial machines in the area of audio control, office automation, industrial control, home appliances, etc. The module should not be used in applications where the highest level of safety and reliability are required and module failure or malfunction of such module results in physical harm or loss of life, as well as enormous damage or loss. Such fields of applications include, without limitation, medical, aerospace, communications infrastructure, atomic energy control. Kyocera expressly disclaims any and all liability resulting in any way to the use of the module in such applications.
- 2. Customer agrees to indemnify, defend and hold Kyocera harmless from and against any and all actions, claims, damages, liabilities, awards, costs, and expenses, including legal expenses, resulting from or arising out of Customer's use, or sale for use, or Kyocera modules in applications.

# Caution

1. Kyocera shall have the right, which Customer hereby acknowledges, to immediately scrap or destroy tooling for Kyocera modules for which no Purchase Orders have been received from the Customer in a two-year period.

## 1. Application

This document defines the specification of TCG057VGLCZ-H50. (RoHS Compliant)

#### 2. Construction and outline

LCD	: Transmissive color dot matrix type TFT
Backlight system	: LED
Additional circuit	: Timing controller, Power supply (3.3V input) (without constant current circuit for LED Backlight)
Touch panel	: Analog type(Glass/Glass)
Surface film	: Glare low-reflection treatment

### 3. Mechanical specifications

#### 3-1. LCD

Item	Specification	Unit
Outline dimensions 1)	144(W)×(104.8)(H)×14.93(D)	mm
Active area	115.2(W)×86.4(H) (14.4cm/5.7 inch(Diagonal))	mm
Dot format	640×(B,G,R)(W)×480(H)	dot
Dot pitch	0.06(W)×0.18(H)	mm
Base color 2)	Normally White	-
Mass	255	g

1) Projection not included. Please refer to outline for details.

2) Due to the characteristics of the LCD material, the color varies with environmental temperature.

#### 3-2. Touch panel

Item		Specification	Unit	
Input		Radius-0.8 stylus or Finger	-	
Astroption Former	Before reliability test		0.1~2.0	Ν
Actuation Force	After reliability test	1)	0.1~3.0	Ν
Oneverting life	Striking(Finger-input)	2)	1 million	hits
Operating life	Sliding(Stylus–input) 3)		100 thousand	characters
Surface hardness	3		2H or more(Pencil hardness)	-
Static load		4)	Min.5	kgf

 Pls refer to "11.reliability test data" for details (The tested panel is not used in any other tests)

2) Striking test cond	lition
Testing rod	: Silicon rubber (Hardness:60°),Tip : R = 6.0,
<b>Testing</b> location	: Center of active area
Load	$ ightarrow 2.45 \mathrm{N}$
Cycle	÷2hits/sec
Judgment	: No defect in function
	: No appearance defect which causes trouble to use.
	*Dents, blurs and marks on surface film : neglected

# 3) Sliding test condition

: Polyacetal resin, Tip : R = 0.8
: Center of active area
$2.45\mathrm{N}$
: 10mm
: 50mm/sec
: 10mm sliding (back and forth) counts as 2 times.
: No defect in function
: No appearance defect which causes trouble to use.
*Dents, blurs and marks on surface film : neglected

#### 4) Static load test condition

Testing rod	$\div$ Silicon rubber, Tip $\div \phi$ 10 , Hardness $\div 50^\circ$

2) When brightness decrease 50% of minimum brightness. The average life of a LED will decrease when the LCD is operating at higher temperatures.

- 3) Life time is estimated data.(Condition : IF=(60)mA, Ta=25°C in chamber).
- 4) An input current below (TBD)mA may reduce the brightness uniformity of the LED backlight. This is because the amount of light from each LED chip is different. Therefore, please evaluate carefully before finalizing the input current.

## 10. Design guidance for analog touch panel

10-1. Electrical (In customer's design, please remember the following considerations.)

- 1) Do not use the current regulated circuit.
- Keep the current limit with top and bottom layer. (Please refer to "Electrical absolute maximum ratings" for details.)
- 3) Analog touch panel can not sense two points touching separately.
- 4) A contact resistance is appeared at the touch point between top and bottom layer. After this resistance has stable read of the touch panel position data.
- 5) Because noise of inverter or peripheral circuits may interfere signal of touch panel itself it is necessary to design carefully in advance to avoid these noise problem.

#### 10-2. Software

- 1) Do the "User Calibration".
- 2) "User Calibration" may be needed with long term using. Include "User Calibration" menu in your software.
- 3) When drawing a line with a stylus, there may be a slight discontinuity when the stylus passes over a spacer-dot. If necessary, please provide a compensation feature within your software.

#### 10-3. Mounting on display and housing bezel

- 1) Do not use an adhesive tape to bond it on the front of touch panel and hang it to the housing bezel.
- 2) This touch panel has an airtight but not watertight structure. Please not to use it for the applications requiring watertight or under the environments occurred condensation. If it is expected to be exposed to the environments that vapor, moisture or other liquids may seep inside a bezel, please be sure to take some measurements for drip-proof or waterproof by using sealing materials on the bezel.
- 3) Please mount the touch panel so that it does not move or slide relative to the LCD, even when vibration or shock is applied and even when high humidity or high temperature may weaken the mounting adhesive.

#### 11. Lot number identification

The lot number shall be indicated on the back of the backlight case of each LCD.

#### 12. Warranty

#### 12-1. Incoming inspection

Please inspect the LCD within one month after your receipt.

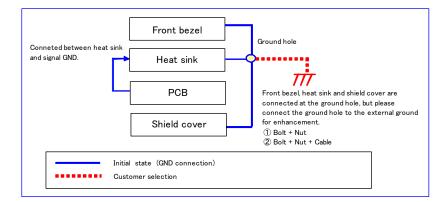

#### 12-2. Production warranty

Kyocera warrants its LCD's for a period of 12 months from the ship date. Kyocera shall, by mutual agreement, replace or re-work defective LCD's that are shown to be Kyocera's responsibility.

#### 13. Precautions for use

- 13-1. Installation of the LCD  $\,$
- 1) The LCD has a grounding hole. Please ground the LCD to prevent noise and to stabilize its performance as circumstances demand.

- 2) The LCD shall be installed so that there is no pressure on the LSI chips.
- 3) The LCD shall be installed flat, without twisting or bending.

5) A transparent protection sheet is attached to the touch panel. Please remove the protection film slowly before use, paying attention to static electricity.

#### 13-2. Static electricity

- 1) Since CMOS ICs are mounted directly onto the LCD glass, protection from static electricity is required.
- 2) Workers should use body grounding. Operator should wear ground straps.

#### 13-3. LCD operation

1) The LCD shall be operated within the limits specified. Operation at values outside of these limits may shorten life, and/or harm display images.

#### 13-4. Storage

- The LCD shall be stored within the temperature and humidity limits specified. Store in a dark area, and protect the LCD from direct sunlight or fluorescent light.
- 2) Always store the LCD so that it is free from external pressure onto it.

#### 13-5. Usage

- 1) <u>DO NOT</u> store in a high humidity environment for extended periods. Polarizer degradation bubbles, and/or peeling off of the polarizer may result.
- 2) Do not push or rub the touch panel's surface with hard to sharp objects such as knives, or the touch panel may be scratched.
- 3) When the touch panel is dirty, gently wipe the surface with a soft cloth, sometimes moistene d by mild detergent or alcohol. If a hazardous chemical is dropped on the touch panel by mi stake, wipe it off right away to prevent human contact.
- 4) The touch panel is made of glass. It may break when dropped, or vibrated excessively. Usually there is a film on the surface of the glass which would prevent broken glass from scattering, but nevertheless handle it carefully during assembly and treat it gently during use.
- 5) Touch panel edges are sharp, so they have a possibility of cutting your body, for example your finger. Handle the touch panel with enough care to prevent cuts. When you hold the touch panel, put on the protector, for example the gloves which have a strength enough to stand sharpness of touch panel edges.
- 6) Always keep the LCD free from condensation during testing. Condensation may permanently spot or stain the polarizer.
- 7) Do not disassemble LCD because it will result in damage.
- 8) This Kyocera LCD has been specifically designed for use in general electronic devices, but not for use in a special environment such as usage in an active gas. Hence, when the LCD is supposed to be used in a special environment, evaluate the LCD thoroughly beforehand and do not expose the LCD to chemicals such as an active gas.
- 9) Please do not use solid-base image pattern for long hours because a temporary afterimage may appear. We recommend using screen saver etc. in cases where a solid-base image pattern must be used.
- 10) Liquid crystal may leak when the LCD is broken. Be careful not to let the fluid go into your eyes and mouth. In the case the fluid touches your body; rinse it off right away with water and soap.

- 1) Test in center of active area.
- 2) Dents, blurs and marks on surface film: neglected.
- 3) 10mm sliding (back and forth) counts as 2 times.
- 4) Temp. cycle test (Heat shock included): the LCD shall be tested after leaving it stabilize at room temperature for 2 hours after the last cycle.
- 5) An operational test was performed after the following conditions. First, the touch panel was left for a certain time under 5V voltages applied (without touch), Then it was left at room temperature (No VDC applied) for 2 hours.
- 6) Each test item uses a test LCD only once. The tested LCD is not used in any other tests.
- 7) The LCD is tested in circumstances in which there is no condensation.
- 8) The reliability test is not an out-going inspection.
- The result of the reliability test is for your reference purpose only. The reliability test is conducted only to examine the LCD's capability.
