RECORD OF REVISIONS

Revision No	Revision Date	Page	Description
Ver.1.0	Jun.13.2008	-	Final CAS
Ver.1.1	Aug.01.2008	-	Final CAS
		4	Modified Power consumption : 0.41W \rightarrow 0.27W
		6	Modified electrical characteristics
			Power supply input current : 124mA \rightarrow 82mA
		17,18	Added drawing about circuit area
Ver.1.2	Sep.10.2008	16,17	Changed drawing about 'Open Area' of casetop : 92.976 \rightarrow 93.976
Ver. 1.3	Oct.21.2008	8	Signal Timing Specifications

1. General Description

The LB070WV4 is a Color Active Matrix Liquid Crystal Display with an integral Light Emitting Diode(LED) backlight system. The matrix employs a-Si Thin Film Transistor as the active element. It is a transmissive type display operating in the normally white mode. This TFT-LCD has 7.0 inches diagonally measured active display area with WVGA resolution(800 horizontal by 480 vertical pixel array). Each pixel is divided into Red, Green and Blue sub-pixels or dots which are arranged in horizontal stripes. Gray scale or the brightness of the sub-pixel color is determined with a 8-bit gray scale signal for each dot, thus, presenting a palette of more than 16,772,216 colors.

The LB070WV4 has been designed to apply the interface method that enables low power, high speed, low EMI.

The LB070WV4 is intended to support applications where thin thickness, low power are critical factors and graphic displays are important. In combination with the vertical arrangement of the sub-pixels, the LB070WV4 characteristics provide an excellent flat display.

General Features

Ver. 1.3	OCT. 21. 2008	4 / 23
Surface Treatment	Anti-glare treatment of the front polarizer	
Display Operating Mode	Transmissive mode, normally white	
Weight	120g (Max.140g)	
Power Consumption	0.27W(LCM), 1.55W(LED)	
Luminance, White	350 cd/m ² (Typ.)	
Color Depth	8-bit, 16,772,216 colors	
Pixel Format	800 horiz. by 480 vert. Pixels RGB strip arrangement	
Pixel Pitch	0.1893 mm × 0.1887 mm	
Outline Dimension	165x104.6x3.6mm	
Active Screen Size	7.0 inches diagonal	

2. Absolute Maximum Ratings

The following are maximum values which, if exceeded, may cause faulty operation or damage to the unit.

Parameter		Symbol	Val	ues	Units	Notes	
	arameter	Symbol Min		Max	Units		
Power Input Voltage		VCC	0.0	3.6	Vdc	at 25 \pm 5°C	
Storag	Storage Temperature		-30	80	°C	1	
Operating	Surface Of Panel	Тр	-20	70	°C	1,2	
Temperature	Ambient	Ta	-	-	°C	1,2,3	

Table 1. ABSOLUTE MAXIMUM RATINGS

Notes :

- 1. Maximum wet-bulb temperature is 58 °C. Condensation of dew must be avoided, because it may cause electrical current leakage, and deterioration of performance and quality.
- 2. The operating temperature means that LCD Module guarantees operation of the circuit.
- All the contents of Electro-optical specifications are guaranteed under the room temperature condition. 3. This temperature is ambient temperature with regard to the heat which is generated under operation

of circuit and backlight on.(reference value)

3. Electrical Specifications

3-1. Electrical Characteristics

The LB070WV4 requires two power inputs. One is employed to power the LCD electronics and to drive the TFT array and liquid crystal. The second input which powers the LED, is typically generated by an LED Driver. The LCD don't include LED Driver.

Parameter	Symbol		Values	Unit	Notes	
Parameter	Symbol	Min	Тур	Max	Unit	Notes
LCD :						
Power Supply Input Voltage	VCC	3.0	3.3	3.6	V _{DC}	
Power Supply Input Current	I _{cc}	-	82	100	mA	1
Power Consumption	Pc	-	0.27	0.33	Watt	1

Table 2	FI ECTRICAL	CHARACTERISTICS
	LLLOINIOAL	

Note)

1. The specified current and power consumption are under the Vcc = 3.3V, 25 °C, fv = 60Hz condition whereas "Full Black Pattern" is displayed and fv is the frame frequency.

Table 3. Backlight Unit

 $(T_a = 25^{\circ}C)$

PARAMETER	SYMBOL	MIN.	TYP.	MAX.	UNIT	REMARK
LED forward Current	I _f	-	20	-	mA	1
Power Consumption	P _{BL}	1.4	1.55	1.7	W	

Note)

1. The permissible forward current of LED vary with environmental temperature.

3-2. Interface Connections

3-3. Signal Timing Specifications

This is the signal timing required at the input of the User connector. All of the interface signal timing should be satisfied with the following specifications for its proper operation.

	Item	Symbol	Min.	Тур.	Max.	Unit	Remarks
	Frame frequency		50	60	70	Hz	1
	Frequency	fCLK	31.95	33.26	34.60	MHz	
	Period	tDCYC	28.90	30.06	31.30	ns	
DCLK	DOTCLK rise/fall time	tR, tF	-	-	2	ns	
	High Level Width	tDCHW	9	-	-	ns	
	Low Level Width	tDCLW	9	-	-	ns

	Vertical display area	VDISP	-	480	-	Line	

Table 6. TIMING TABLE

*** 60Hz Framerate ***

Note)

1. Typical frequency is 60Hz.

The lower frequency goes, the more flickering happens.

3-4. Signal Timing Waveforms

3-5. Color Input Data Reference

The brightness of each primary color (red,green and blue) is based on the 6-bit gray scale data input for the color ; the higher the binary input, the brighter the color. The table below provides a reference for color versus data input.

Colors	Gray												Data (Signa											
& Gray Scale	Scale Levels				R	ED							GR	EEN							BL	UE.			
		R0	R1	R2	R3	R4	R5	R6	R7	GO	G1	G2	G3	G4	G5	G6	G7	B0	B1	B2	B3	B4	B5	B6	B7

Note)

1. Please avoid floating state of interface signal at invalid period.

2. When the interface signal is invalid, be sure to pull down the power supply for LCD VCC to 0V.

3. LED power must be turn on after power supply for LCD and interface signal are valid.

4. Optical Specifications

Optical characteristics are determined after the unit has been 'ON' and stable for approximately 5 minutes in a dark environment at 25°C. The values specified are at an approximate distance 50cm from the LCD surface at a viewing angle of Φ and Θ equal to 0°.

FIG. 1 presents additional information concerning the measurement equipment and method.

FIG. 1 Optical Characteristic Measurement Equipment and Method

	Demonstern		11	Natas

Gray Scale							6
Ver. 1.3		OOT	21. 2008				12 / 3

Note)

1. Contrast Ratio(CR) is defined mathematically as

Surface Luminance with all white pixels

Contrast Ratio =

Surface Luminance with all black pixels

- 2. Surface luminance is measured at the center point(L₁) of the LCD with all pixels displaying white at the distance of 50cm by PR-880. Color Coordinates are measured at the center point(L₁) of the LCD with all pixels displaying red, green, blue and white at the distance of 50cm by PR-650. For more information, refer to the FIG 1 and FIG 2.
- 3. Luminance % uniformity is measured for 9 point For more information see FIG 2. δ WHITE = Maximum(L1,L2,, L9) \div Minimum(L1,L2,, L9)
- 4. Response time is the time required for the display to transition from white to black (Rise Time, Tr_R) and from black to white(Decay Time, Tr_D). For additional information see FIG 3.
- 5. Viewing angle is the angle at which the contrast ratio is greater than 10. The angles are determined for the horizontal or x axis and the vertical or y axis with respect to the z axis which is normal to the LCD surface. For more information see FIG 4.
- 6. Gray scale specification

Gray Level	Luminance [%] (Typ)
LO	(0.17)
L7	(0.96)
L15	(4.26)
L23	(10.54)
L31	(20.07)
L39	(33.71)
L47	(53.7)
L55	(80.08)
L63	(100)

FIG. 2 Luminance

<measuring point for surface luminance & measuring point for luminance variation>

FIG. 3 Response Time

The response time is defined as the following figure and shall be measured by switching the input signal for "black" and "white".

FIG. 4 Viewing angle

5. Mechanical Characteristics

The contents provide general mechanical characteristics for the model LB070WV4. In addition the figures in the next page are detailed mechanical drawing of the LCD.

Month	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec
Mark	1	2	3	4	5	6	7	8	9	А	В	С

b) Location of Lot Mark

Serial No. is printed on the label. The label is attached to the backside of the LCD module. This is subject to change without prior notice.

8-2. Packing Form

- a) Package quantity in one box : 40 pcs
- b) Box Size : 475 mm \times 348 mm \times 182 mm

9. PRECAUTIONS

Please pay attention to the followings when you use this TFT LCD module.

9-1. MOUNTING PRECAUTIONS

- (1) You must mount a module using holes arranged in four corners or four sides.
- (2) You should consider the mounting structure so that uneven force (ex. Twisted stress) is not applied to the module. And the case on which a module is mounted should have sufficient strength so that external force is not transmitted directly to the module.
- (3) Please attach the surface transparent protective plate to the surface in order to protect the polarizer. Transparent protective plate should have sufficient strength in order to the resist external force.
- (4) You should adopt radiation structure to satisfy the temperature specification.
- (5) Acetic acid type and chlorine type materials for the cover case are not desirable because the former generates corrosive gas of attacking the polarizer at high temperature and the latter causes circuit break by electro-chemical reaction.
- (6) Do not touch, push or rub the exposed polarizers with glass, tweezers or anything harder than HB pencil lead. And please do not rub with dust clothes with chemical treatment. Do not touch the surface of polarizer for bare hand or greasy cloth.(Some cosmetics are detrimental to the polarizer.)
- (7) When the surface becomes dusty, please wipe gently with absorbent cotton or other soft materials like chamois soaks with petroleum benzene. Normal-hexane is recommended for cleaning the adhesives used to attach front / rear polarizers. Do not use acetone, toluene and alcohol because they cause chemical damage to the polarizer.
- (8) Wipe off saliva or water drops as soon as possible. Their long time contact with polarizer causes deformations and color fading.
- (9) Do not open the case because inside circuits do not have sufficient strength.

9-2. OPERATING PRECAUTIONS

- (1) The spike noise causes the mis-operation of circuits. It should be lower than following voltage : $V=\pm 200 mV$ (Over and under shoot voltage)
- (2) Response time depends on the temperature.(In lower temperature, it becomes longer.)
- (3) Brightness depends on the temperature. (In lower temperature, it becomes lower.) And in lower temperature, response time(required time that brightness is stable after turned on) becomes longer.
- (4) Be careful for condensation at sudden temperature change. Condensation makes damage to polarizer or electrical contacted parts. And after fading condensation, smear or spot will occur.
- (5) When fixed patterns are displayed for a long time, remnant image is likely to occur.
- (6) Module has high frequency circuits. Sufficient suppression to the electromagnetic interference shall be done by system manufacturers. Grounding and shielding methods may be important to minimized the interference.

9-3. ELECTROSTATIC DISCHARGE CONTROL

Since a module is composed of electronic circuits, it is not strong to electrostatic discharge. Make certain that treatment persons are connected to ground through wrist band etc. And don't touch interface pin directly.

9-4. PRECAUTIONS FOR STRONG LIGHT EXPOSURE

Strong light exposure causes degradation of polarizer and color filter.

9-5. STORAGE

When storing modules as spares for a long time, the following precautions are necessary.

- (1) Store them in a dark place. Do not expose the module to sunlight or fluorescent light. Keep the temperature between 5°C and 35°C at normal humidity.
- (2) The polarizer surface should not come in contact with any other object.It is recommended that they be stored in the container in which they were shipped.

9-6. HANDLING PRECAUTIONS FOR PROTECTION FILM

- (1) When the protection film is peeled off, static electricity is generated between the film and polarizer. This should be peeled off slowly and carefully by people who are electrically grounded and with well ion-blown equipment or in such a condition, etc.
- (2) The protection film is attached to the polarizer with a small amount of glue. If some stress is applied to rub the protection film against the polarizer during the time you peel off the film, the glue is apt to remain on the polarizer.

Please carefully peel off the protection film without rubbing it against the polarizer.

- (3) When the module with protection film attached is stored for a long time, sometimes there remains a very small amount of glue still on the polarizer after the protection film is peeled off.
- (4) You can remove the glue easily. When the glue remains on the polarizer surface or its vestige is recognized, please wipe them off with absorbent cotton waste or other soft material like chamois soaked with normal-hexane.
