Product Specification

1. General Description

The LD050WV1 is a Color Active Matrix Liquid Crystal Display with an integral WHITE LED backlight system. The matrix employs a-Si Thin Film Transistor as the active element. It is a transmissive type display operating in the normally black mode. This TFT-LCD has 5.0 inches diagonally measured active display area with WVGA resolution(480 horizontal by 800 vertical pixel array). Each pixel is divided into Red, Green and Blue sub-pixels or dots which are arranged in horizontal stripes. Gray scale or the brightness of the sub-pixel color is determined with a 8-bit gray scale signal for each dot, thus, presenting a palette of more than 16M colors.

The LD050WV1 has been designed to apply the interface method that enables low power, high speed, low EMI.

The LD050WV1 is intended to support applications where thin thickness, low power are critical factors.

General Features

Active Screen Size	5 inches diagonal
Outline Dimension	71.4(H) × 120.4(V) × 2.5(T) mm (Typ.)
Pixel Pitch	0.135 × 0.135 mm
Pixel Format	480 horiz. by 800 vert. Pixels RGB strip arrangement
Color Depth	8-bit, 16,777,216 colors
Luminance, White	500 cd/m ² (Typ.)
Signal Interface	SPI+RGB
Power Consumption	Total 0.756W(Typ.) Logic : 0.116W (Typ.@ Mosaic), B/L : 0.64W (Typ.)
Weight	43.6g(Typ.), 45g(Max.)
Display Operating Mode	Transmissive mode, normally black
Surface Treatment	Anti-glare
RoHS Compliance	Yes

Product Specification

2. Absolute Maximum Ratings

The following are maximum values which, if exceeded, may cause faulty operation or damage to the unit.

Table 1. ABSOLUTE MAXIMUM RATINGS

Parameter	Symbol	Values		Units	Notes
		Min	Max		
Power supply Voltage	VCC	-0.3	4.5	Vdc	at 25 ± 5°C
Logic Input Voltage	Vio	-0.3	4.5	Vdc	2-1
LED Forward current	If		20	mA	Per LED
LED Reverse Voltage	VR		5	V	Per LED
Storage Temperature	HST	-30	80	°C	
Operating Temperature	Top	-20	70	°C	2-2
Operating Ambient Humidity	HOP	10	90	%RH	2-3
Storage Humidity	HST	10	90	%RH	2-3

Notes :

2-1. I/O voltage: R[7:0],G[7:0],B[7:0], CLK, Hsync, Vsync, Reset, CS, SCL, SDI

2-2. The operating temperature means that LCD Module guarantees operation of the circuit.

All the contents of Electro-optical specifications are guaranteed under the room temperature condition.

2-3. Non-condensation. Maximum value is 90%RH at 60°C.

Product Specification

3. Electrical Specifications

3-1. Electrical Characteristics

The LD050WV1 requires two power inputs. One is employed to power the LCD electronics and to drive the TFT array and liquid crystal. The second input which powers the LED, is typically generated by an LED-driver. The LED-driver is an external unit to the LCD.

Table 2. ELECTRICAL CHARACTERISTICS

($T_a = 25^\circ C$)

PARAMETER	SYMBOL	MIN.	TYP.	MAX.	UNIT	Notes
Module:						
power supply input voltage	VCC	2.8	2.9	3.0	V	3-1
Power supply input current	I _{CC}	-	35	50	mA	3-2
Power Consumption	P _C	-	101.5	145	mW	
LED:						
LED Current	I _{LED}	-	40	-	mA	
LED Power Consumption	P _{LED}	-	640	-	mW	

Note)

3-1. The measuring position is the connector of LCM.

3-2. The specified I_{CC} current and power consumption are under the VCC = 2.9V , 25°C , f_v = 60Hz condition and Mosaic pattern(6x8).

3-2. Backlight Driving Condition

Parameter	Symbol	Value			Unit	Notes
		Min.	Typ.	Max.		
LED current	I _{LED}	-	40	-	mA	
LED voltage	V _{LED}	-	16	-	V

4. Optical Characteristics

4-1. TFT LCD Module

Optical characteristics are determined after the unit has been 'ON' and stable for approximately 20 minutes in a dark environment at 25°C. The values specified are at an approximate distance 50cm from the LCD surface at a viewing angle of ϕ and θ equal to 0°.

FIG. 1 presents additional information concerning the measurement equipment and method.

FIG. 2 Optical Characteristic Measurement Equipment and Method

$T_a=25^{\circ}\text{C}$, $V_{CC}=2.9\text{V}$, $f_v=60\text{Hz}$, $D_{clk}=31\text{MHz}$, $I_{led}=40\text{mA}$

PARAMETER	SYMBOL	CONDITION	MIN.	TYP.	MAX.	UNIT	Notes

Luminance Uniformity	δ_{WHITE}	$I_{led}=40\text{mA}$	-	1.25	1.40	-	4-5

Product Specification

Note.

4-1. Surface luminance is the average of 5 point across the LCD surface 50cm from the surface with all pixels displaying white. For more information see FIG 2.

$$LWH = \text{Average}(L1, L2, \dots L5)$$

4-2. Contrast Ratio(CR) is defined mathematically as

$$\text{Contrast Ratio} = \frac{\text{Surface Luminance with all white pixels}}{\text{Surface Luminance with all black pixels}}$$

4-3. Viewing angle is the angle at which the contrast ratio is greater than 10. The angles are determined for the horizontal or x axis and the vertical or y axis with respect to the z axis which is normal to the LCD surface. For more information see FIG 3.

4-4. Response time is the time required for the display to transition from white to black (rise time, TrR) and from black to white (Decay Time, TrD). For additional information see FIG 4

4-5. The variation in surface luminance, The panel total variation (δ WHITE) is determined by measuring LN at each test position 1 through 13 and then defined as following numerical formula.
For more information see FIG 5.

$$\delta \text{ WHITE} (= \frac{\text{Maximum}(L1, L2, \dots L13) - \text{Minimum}(L1, L2, \dots L13)}{\text{Maximum}(L1, L2, \dots L13)} * 100(\%))$$

FIG. 3 Viewing angle

Product Specification
FIG. 4 Response Time

The response time is defined as the following figure and shall be measured by switching the input signal for "black" and "white".

FIG. 5 Luminance uniformity

Product Specification

5. Mechanical Characteristics

The contents provide general mechanical characteristics for the model LD050WV1. In addition the figures in the next page are detailed mechanical drawing of the LCD.

Parameter	Specification		Unit	Notes

6. Reliability

Environment test condition

NO	TEST ITEMS	CONDITION	Notes
1	High Temperature Storage Test	Ta = 80℃ 240h	6-1,2
2	Low Temperature Storage Test	Ta = -30℃ 240h	6-1,2
3	High Temperature Operation Test	Ta = 70℃ 240h	6-1,2
4	Low Temperature Operation Test	Ta = -20℃ 240h	6-1,2
5	High Temperature and High Humidity Operation Test	Ta = 60℃ 90%RH 240h	6-1,2
6	Packing Vibration	Random 1.5Grms Z direction 60min	-
7	Thermal Shock Test	-30℃(0.5h) ~ 80℃(0.5h) / 100 cycles	6-1,2
8	Shock Test (non-operating)	Half sine wave, 180G, 2ms 1 times shock of each six faces	-
9	Vibration Test (non-operating)	Random vibration, 3 ~ 100Hz, 1.0Grms, 3 axis, 0.5hour/axis	-
10	Electro Static Discharge Test	- Panel Surface / Top Case: 150pF, 150Ω (Air : ±15kV , Contact : ±15kV) - FPC input terminal : 100pF ±200V 0Ω	6-3

[Note 6-1]

T_a = Ambient Temperature

In the standard condition, there shall be no practical problems that may affect the display function.

[Note 6-2] Result Evaluation Criteria

TFT-LCD panel should be at room temperature for 48 hours when the display quality test is over.

There should be no particular change which might affect the practical display function.

[Note 6-3] Result Evaluation Criteria: Level A or B → OK, Level C or D → NG

■ Description of Level

- Level "A" : Normal display
- Level "B" : Abnormal display temporarily, but recovers within 3 seconds
- Level "C" : Abnormal display, but recovers after quite long time or after On/Off
- Level "D" : Abnormal display, never recovers

■ Description of Abnormal display

- Blinking, Noise, Block Dim, Line defect, etc.

Product Specification**7. International Standards****7-1. Safety**

- a) UL 60950-1, Second Edition, Underwriters Laboratories Inc.
Information Technology Equipment - Safety - Part 1 : General Requirements.
- b) CAN/CSA C22.2 No.60950-1-07, Second Edition, Canadian Standards Association.
Information Technology Equipment - Safety - Part 1 : General Requirements.
- c) EN 60950-1 :2006 + A11:2009, European Committee for Electrotechnical Standardization (CENELEC).
Information Technology Equipment - Safety - Part 1 : General Requirements.

7-2. Environment

- a) RoHS, Directive 2002/95/EC of the European Parliament and of the council of 27 January 2003

7-3. EMC

- a) ANSI C63.4 "American National Standard for Methods of Measurement of Radio-Noise Emissions from Low-Voltage Electrical and Electronic Equipment in the Range of 9 kHz to 40 GHz." American National Standards Institute (ANSI), 2003.
- b) CISPR 22 "Information technology equipment – Radio disturbance characteristics – Limit and methods of measurement." International Special Committee on Radio Interference (CISPR), 2005.
- c) CISPR 13 "Sound and television broadcast receivers and associated equipment – Radio disturbance characteristics – Limits and method of measurement." International Special Committee on Radio Interference (CISPR), 2006.

9. Precautions

Please pay attention to the following when you use this TFT LCD module.

9-1. Mounting Precautions

- (1) You should consider the mounting structure so that uneven force(ex. Twisted stress) is not applied to the module.
And the case on which a module is mounted should have sufficient strength so that external force is not transmitted directly to the module.
- (2) Please attach a transparent protective plate to the surface in order to protect the polarizer.
Transparent protective plate should have sufficient strength in order to resist external force.
- (3) You should adopt radiation structure to satisfy the temperature specification.
- (4) Acetic acid type and chlorine type materials for the cover case are not desirable because the former generates corrosive gas of attacking the polarizer at high temperature and the latter causes circuit break by electro-chemical reaction.
- (5) Do not touch, push or rub the exposed polarizers with glass, tweezers or anything harder than HB pencil lead. And please do not rub with dust clothes with chemical treatment.
Do not touch the surface of polarizer for bare hand or greasy cloth.(Some cosmetics deteriorate the polarizer.)
- (6) When the surface becomes dusty, please wipe gently with absorbent cotton or other soft materials like chamois soaks with petroleum benzine. Normal-hexane is recommended for cleaning the adhesives used to attach front / rear polarizers. Do not use acetone, toluene and alcohol because they cause chemical damage to the polarizer.
- (7) Wipe off saliva or water drops as soon as possible. Their long time contact with polarizer causes deformations and color fading.
- (8) The metal case of a module should be contacted to electrical ground of your system.

9-2. Operating Precautions

- (1) The spike noise causes the mis-operation of circuits. It should be lower than following voltage :
 $V = \pm 200\text{mV}$ (Over and under shoot voltage)
- (2) Response time depends on the temperature.(In lower temperature, it becomes longer.)
- (3) Brightness depends on the temperature. (In lower temperature, it becomes lower.)
And in lower temperature, response time(required time that brightness is stable after turned on) becomes longer.
- (4) Be careful for condensation at sudden temperature change. Condensation makes damage to polarizer or electrical contacted parts. And after fading condensation, smear or spot will occur.
- (5) When fixed patterns are displayed for a long time, remnant image is likely to occur.
- (6) Module has high frequency circuits. Sufficient suppression to the electromagnetic interference shall be done by system manufacturers. Grounding and shielding methods may be important to minimize the interference.

Product Specification

9-3. Electrostatic Discharge Control

Since a module is composed of electronic circuits, it is not strong to electrostatic discharge. Make certain that treatment persons are connected to ground through wrist band etc. And don't touch interface pin directly.

9-4. Precautions for Strong Light Exposure

Strong light exposure causes degradation of polarizer and color filter.

9-5. Storage

When storing modules as spares for a long time, the following precautions are necessary.

- (1) Store them in a dark place. Do not expose the module to sunlight or fluorescent light. Keep the temperature between 5°C and 35°C at normal humidity.
- (2) The polarizer surface should not come in contact with any other object.
It is recommended that they be stored in the container in which they were shipped.

9-6. Handling Precautions for Protection Film

- (1) When the protection film is peeled off, static electricity is generated between the film and polarizer.
This should be peeled off slowly and carefully by people who are electrically grounded and with well ion-blown equipment or in such a condition, etc.
- (2) The protection film is attached to the polarizer with a small amount of glue. If some stress is applied to rub the protection film against the polarizer during the time you peel off the film, the glue is apt to remain on the polarizer.
Please carefully peel off the protection film without rubbing it against the polarizer.
- (3) When the module with protection film attached is stored for a long time, sometimes there remains a very small amount of glue still on the polarizer after the protection film is peeled off.
- (4) You can remove the glue easily. When the glue remains on the polarizer surface or its vestige is recognized, please wipe them off with absorbent cotton waste or other soft material like chamois soaked with normal-hexane.
