1. General Description

LM190E0A-SLD1 is a Color Active Matrix Liquid Crystal Display with a Light Emitting Diode (LED) backlight system Assembly without LED driver. The matrix employs a-Si Thin Film Transistor as the active element. It is a transmissive type display operating in the normally black mode. It has a 19.0 inch diagonally measured active display area with SXGA resolution (1024 vertical by 1280 horizontal pixel array) Each pixel is divided into Red, Green and Blue sub-pixels or dots which are arranged in vertical stripes. Gray scale or the brightness of the sub-pixel color is determined with a 8-bit gray scale signal for each dot, thus, presenting a palette of more than 16,7M colors with Advanced-FRC(Frame Rate Control). It has been designed to apply the interface method that enables low power, high speed, low EMI. FPD Link or compatible must be used as a LVDS(Low Voltage Differential Signaling) chip. It is intended to support applications where thin thickness, wide viewing angle, low power are critical factors and graphic displays are important. It is intended to support displays where high brightness, super wide viewing angle, high color saturation, and high color are important.

General Features

Figure 1. Block diagram

| Active Screen Size | 19.0 inches(479.96mm) diagonal |
|------------------------|--|
| Outline Dimension | 396.0(H) X 324.0(V) X 9.9(D) mm[Typ] |
| Pixel Pitch | 0.2928mm x 0.2928mm |
| Pixel Format | 1280 horiz. By 1024 vert. Pixels RGB stripes arrangement |
| Color Depth | 16.7M colors |
| Luminance, White | 250 cd/m² (Center 1 Point, Typ.) |
| Viewing Angle(CR>10) | View Angle Free (R/L 178(Typ.), U/D 178(Typ.)) |
| Power Consumption | Total 9.95 Watt (Typ.) (2.15 Watt @ Vin, 7.8 Watt @Is=70 mA) |
| Weight | 1460g (Typ) |
| Display Operating Mode | Transmissive mode, normally Black |
| Panel type | Forward type |
| Surface Treatment | Hard coating(3H) & Anti-Glare treatment of the front polarizer |

2. Absolute maximum ratings

The following are maximum values which, if exceeded, may cause faulty operation or damage to the unit.

Table 1. Absolute maximum ratings

| Parameter | Symbol | Val | ues | Units | Notes | |
|-------------------------------------|---------------------------------------|-----|-----|---------|--------|--|
| Farameter | Symbol | Min | Max | Office | Notes | |
| Power Supply Input Voltage | er Supply Input Voltage Vin -0.3 +5.5 | | Vdc | At 25°C | | |
| Operating Temperature | T _{OP} | 0 | 50 | °C | | |
| Storage Temperature | T _{ST} | -20 | 60 | °C | 100 | |
| Operating Ambient Humidity | H _{OP} | 10 | 90 | %RH | 1,2,,3 | |
| Storage Humidity | H _{ST} | 10 | 90 | %RH | | |
| LCM Surface Temperature (Operation) | T _{surface} | 0 | 65 | °C | 1, 4 | |

Note: 1. Temperature and relative humidity range are shown in the figure below.

Wet bulb temperature should be 39 °C Max, and no condensation of water.

- 2. Maximum Storage Humidity is up to 40°C, 70% RH only for 4 corner light leakage Mura.
- 3. Storage condition is guaranteed under packing condition
- 4. LCM Surface Temperature should be Min. 0°C and Max. 65°C under the VLCD=5.0V, fV=60Hz, 25°C ambient Temp. no humidity control and LED string current is typical value.

FIG. 2 Temperature and relative humidity

3. Electrical Specifications

3-1. Electrical Characteristics

It requires two power inputs. One is employed to power the LCD electronics and to drive the TFT array and liquid crystal. The second input power for the LED/Backlight, is typically generated by a LED Driver. The LED Driver is an external unit to the LCDs.

Table 2-1. ELECTRICAL CHARACTERISTICS

| Parameter | Symbol | | Values | Unit | Notes | |
|-------------------------------|--------|-----|--------|------|-------------------|-------|
| Parameter | Symbol | Min | Тур | Max | Unit | Notes |
| MODULE: | | | | | | |
| Power Supply Input Voltage | Vin | 4.5 | 5.0 | 5.5 | Vdc | 5 |
| Permissive Power Input Ripple | VdRF | - | - | 400 | mV _{p-p} | 1 |
| Dower Supply Input Current | ILCD | - | 430 | 540 | mA | 2 |
| Power Supply Input Current | | - | 530 | 660 | mA | 3 |
| Power Consumption | Pc TYP | - | 2.15 | 2.70 | Watt | 2 |
| Power Consumption | Рс мах | | 2.65 | 3.3 | Watt | 3 |
| Rush current | Irush | - | | 3.0 | А | 4 |

Note:

- 1. Permissive power ripple should be measured under Vin =5.0V, 25°C, fV(frame frequency)=MAX condition and At that time, we recommend the bandwidth configuration of oscilloscope is to be under 20Mhz. See the next page.
- 2. The specified current and power consumption are under the V_{LCD} =5.0V, 25± 2°C,fV=60Hz condition whereas Typical Power Pattern [Mosaic] shown in the [Figure 3] is displayed.
- 3. The current is specified at the maximum current pattern.
- 4. Maximum Condition of Inrush current:
 - The duration of rush current is about 5ms and rising time of power Input is 500us \pm 20%.(min.).
- 5. Vin level must be measured at two points on LCM PCB between Vin(test point) and LCM Ground. The measured results need to meet the Power supply input voltage spec. (Test condition: maximum power pattern, 25± 2°C, fV=60Hz)

Ver 1.0 May, 24. 2016 6 / 34

Table 2-2. LED Bar ELECTRICAL CHARACTERISTICS

| Parameter | Symbol | | Unit | Notes | | |
|--------------------|--------|--------|------|------------|------|---------|
| Parameter | Symbol | Min. | Тур. | Max. | Onit | Notes |
| LED String Current | Is | | 70 | 75 | mA | 1, 2, 6 |
| LED String Voltage | Vs | 52.3 | 56.1 | 59.9 | V | 1, 3, 6 |
| Power Consumption | PBar | - | 7.8 | 8.4 | Watt | 1, 2, 5 |
| LED Life Time | LED_LT | 30,000 | - | O - | Hrs | 4 |

Notes) The LED Bar consists of 38 LED packages, 2 strings (parallel) x 19 packages (serial)

LED driver design guide

: The design of the LED driver must have specifications for the LED in LCD Assembly.

The performance of the LED in LCM, for example life time or brightness, is extremely influenced by the characteristics of the LED driver.

So all the parameters of an LED driver should be carefully designed and output current should be Constant current control.

Please control feedback current of each string individually to compensate the current variation among the strings of LEDs.

When you design or order the LED driver, please make sure unwanted lighting caused by the mismatch of the LED and the LED driver (no lighting, flicker, etc) never occurs.

When you confirm it, the LCD module should be operated in the same condition as installed in your instrument.

- 1. The specified values are for a single LED bar.
- 2. The specified current is defined as the input current for a single LED string with 100% duty cycle.
- 3. The specified voltage is input LED string and Bar voltage at typical Current 100% duty current.
- 4. The LED life time is defined as the time when brightness of LED packages become 50% or less than the initial value under the conditions at $Ta = 25 \pm 2^{\circ}C$ and LED string current is typical value.
- 5. The power consumption shown above does not include loss of external driver. The typical power consumption is calculated as $P_{Bar} = V_S(Typ.) \times I_S(Typ.) \times$
- 6. LED operating conditions are must not exceed Max. ratings.

3-2. Interface Connections

3-2-1. LCD Module

- LCD Connector(CN1): IS100-L300-C23 (UJU), GT103-30S-HF15 (LSM)

- Mating Connector: FI-X30C2L (Manufactured by JAE) or Equivalent

Table 3. MODULE CONNECTOR(CN1) PIN CONFIGURATION

| No | Symbol | Description | No | Symbol | Symbol |
|----|---------|--|----|---------|--|
| 1 | FR0M | Minus signal of odd channel 0 (LVDS) | 16 | SR1P | Plus signal of even channel 1 (LVDS) |
| 2 | FR0P | Plus signal of odd channel 0 (LVDS) | 17 | GND | Ground |
| 3 | FR1M | Minus signal of odd channel 1 (LVDS) | 18 | SR2M | Minus signal of even channel 2 (LVDS) |
| 4 | FR1P | Plus signal of odd channel 1 (LVDS) | 19 | SR2P | Plus signal of even channel 2 (LVDS) |
| 5 | FR2M | Minus signal of odd channel 2 (LVDS) | 20 | SCLKINM | Minus signal of even clock channel (LVDS) |
| 6 | FR2P | Plus signal of odd channel 2 (LVDS) | 21 | SCLKINP | Plus signal of even clock channel (LVDS) |
| 7 | GND | Ground | 22 | SR3M | Minus signal of even channel 3 (LVDS) |
| 8 | FCLKINM | Minus signal of odd clock channel (LVDS) | 23 | SR3P | Plus signal of even channel 3 (LVDS) |
| 9 | FCLKINP | Plus signal of odd clock channel (LVDS) | 24 | GND | Ground |
| 10 | FR3M | Minus signal of odd channel 3 (LVDS) | 25 | NC | No Connection (I2C Serial interface for LCM) |
| 11 | FR3P | Plus signal of odd channel 3 (LVDS) | 26 | NC | No Connection.(I2C Serial interface for LCM) |
| 12 | SR0M | Minus signal of even channel 0 (LVDS) | 27 | ITLC | Interlace mode selection |
| 13 | SR0P | Plus signal of even channel 0 (LVDS) | 28 | VIN | Power Supply +5.0V |
| 14 | GND | Ground | 29 | VIN | Power Supply +5.0V |
| 15 | SR1M | Minus signal of even channel 1 (LVDS) | 30 | VIN | Power Supply +5.0V |

Note: 1. All GND(ground) pins should be connected together and to Vss which should also be connected to the LCD's metal frame.

- 2. All Vin (power input) pins should be connected together.
- 3. Input Level of LVDS signal is based on the IEA 664 Standard.
- 4. Always all LVDS signal and clock input should be 8 channels and synchronized.
- 5. ITLC is Interlace mode selection pin. (L : Normal Mode, H : Interlace mode) If you don't use this pin, it should be connected to GND.

Ver 1.0 May, 24. 2016 9 / 34

Table 4. REQUIRED SIGNAL ASSIGNMENT FOR Flat Link (TI:SN75LVDS83) Transmitter

| Pin # | Pin Name | Require Signal | Pin # | Pin Name | Require Signal |

3-2-2. LED Interface

The LED interface connector is a model 10035WR-H06D_Manufactured by Yeonho or equivalent. The mating connector is a SHJP-06V-S(HF), SHJP-06V-A-K(HF) or equivalent.

The pin configuration for the connector is shown in the table below.

| Pin | Symbol | Description |
|-----|--------|---------------------------|
| 1 | FB1 | Channel1 Current Feedback |
| 2 | NC | NC |
| 3 | VLED | LED Power Supply |
| 4 | VLED | LED Power Supply |
| 5 | NC | NC |
| 6 | FB2 | Channel2 Current Feedback |

[Figure 5] Backlight connector view

3-3 Signal timing specifications

This is the signal timing required at the input of the User connector. All of the interface signal timing should be satisfied with the following specifications for it's proper operation.

Table 6. Timing table

| Par | ameter | Symbol | Min. | Тур. | Max. | Unit | Notes | |
|------------------|---------------------------|------------------|------|------|------|------------------|-----------------|--|
| _ | Period | t _{CLK} | 14.8 | 18.5 | 22.2 | ns | Pixel frequency | |
| D _{CLK} | Frequency | f _{CLK} | 45.0 | 54.0 | 67.5 | MHz | : Typ.108MHz | |
| | Horizontal Valid | t _{HV} | 640 | 640 | 640 | | | |
| | H Period Total | t _{HP} | 704 | 844 | 960 | t _{CLK} | | |
| Horizontal | Horizontal Blank | t _{HB} | 64 | 204 | 320 | | | |
| Horizoniai | Hsync Frequency | f _H | 53.3 | 64.0 | 82.1 | kHz | | |
| | Horizontal Back Porch | t _{HBP} | 32 | 124 | 200 | + | | |
| | Horizontal Front Porch | t _{HFP} | 16 | 24 | 40 | t _{CLK} | | |
| | Vertical Valid | t _{VV} | 1024 | 1024 | 1024 | | | |
| | V Period Total | t _{VP} | 1032 | 1066 | 1536 | t _{HP} | | |
| | Vertical Blank | t _{VB} | 8 | 42 | 512 | | | |
| Vertical | Vsync Frequency | f _V | 50 | 60 | 75 | Hz | | |
| | Vertical Back Porch | t _{VBP} | 5 | 38 | 250 | + | | |
| | Vertical Front Porch | t _{VFP} | 1 | 1 | 12 | t _{HP} | | |

Note: Hsync period should be even number times of tCLK. If the value is odd number times of tCLK, display control signal can be asynchronous. In order to operate this LCM a Hsync, Vsyn, and DE(data enable) signals should be used.

- 1. The performance of the electro-optical characteristics may be influenced by variance of the vertical refresh rates.
- 2. Vsync and Hsync should be keep the above specification.
- 3. Hsync Period and Horizontal Back Porch should be any times of character number(4).
- 4. The polarity of Hsync, Vsync is not restricted.
- 5. The Max frequency of 1280X1024 resolution is 67.5Mhz

Ver 1.0 May, 24. 2016 14 / 34

3-4. Signal Timing Waveforms

3-5. Color Input Data Reference

The Brightness of each primary color(red,green,blue) is based on the 8-bit gray scale data input for the color; the higher the binary input, the brighter the color. The table below provides a reference for color versus data input.

Table 7. COLOR DATA REFERENCE

| | | | | | | | Input Color Data | | | | | | | | | | | | | | | | | | | |

3-6. Power sequence

Table 8. POWER SEQUENCE

| Parameter | | Values | | Units |
|-----------|------|--------|-----|-------|
| Parameter | Min | Тур | Max | Onics |
| T1 | 0.5 | - | 10 | ms |
| T2 | 0.01 | - | 50 | ms |
| Т3 | 500 | - | - | ms |
| T4 | 200 | - | - | ms |
| T5 | 0.01 | - | 50 | ms |
| T7 | 1000 | | - | ms |
| T8 | 0.5 | - | T2 | ms |
| Т9 | 0 | | - | ms |

Notes:

- 1. Recommend to follow Power sequence at these case
 - -.AC/DC Power On/Off
 - -. Mode change (Resolution, frequency, timing, sleep mode, Color depth change, etc.)

If not to follow power sequence, there is a risk of abnormal display.

- 2. Please avoid floating state of interface signal at invalid period.
- 3. When the interface signal is invalid, be sure to pull down the power supply for LCD V_{LCD} to 0V.
- 4. LED power must be turn on after power supply for LCD an interface signal are valid.
- 5 . If V_{LCD} Power is Changed during on status, be sure to Pull down the LED Power on to 0V

Ver 1.0 May, 24. 2016 17 / 34

3-7. Vin Power Dip Condition

FIG.6 Power dip condition

1) Dip condition

$$3.5V \le Vin < 4.5V$$
, $t_d \le 20ms$

2) Vin < 3.5V

Vin-dip conditions should also follow the Power On/Off conditions for supply voltage.

Ver 1.0 May, 24. 2016 18 / 34

4. Optical Specifications

Optical characteristics are determined after the unit has been 'ON' for approximately 30 minutes in a dark environment at $25\pm2^{\circ}$ C. The values specified are at an approximate distance 50cm from the LCD surface at a viewing angle of Φ and θ equal to 0 ° and aperture 1 degree.

FIG. 1 presents additional information concerning the measurement equipment and method.

FIG.7 Optical Characteristic Measurement Equipment and Method

4-1. Optical specifications

Table 9. OPTICAL CHARACTERISTICS

(Ta=25 °C, Vin=5V, f_V =60Hz Dclk=54MHz, Is=70mA)

| Gray Scale | | - | | 2.2 | | | 8 |

Notes 1. Contrast Ratio(CR) is defined mathematically as: (By PR880)

$$Contrast Ratio = \frac{Surface Luminance with all white pixels}{Surface Luminance with all black pixels}$$

It is measured at center point(Location P1)

- 2. Surface luminance(Lwh)is luminance value at Center 1 point(P1) across the LCD surface 50cm from the surface with all pixels displaying white. For more information see FIG.8 (By PR880)
- 3. The variation in surface luminance , δ WHITE is defined as : **(By PR880)**

$$\delta_{WHITE} = \frac{\text{Minimum}(L_{P1}, L_{P2}, \dots, L_{P9})}{\text{Maximum}(L_{P1}, L_{P2}, \dots, L_{P9})} \times 100$$

Where L1 to L9 are the luminance with all pixels displaying white at 9 locations. For more information see FIG.8

4. Gray to gray response time is the time required for the display to transition from gray to gray. For additional information see Table 10. *(By RD80S)*

The Gray to Gray response time is defined as the following figure and shall be measured by switching the input signal for "Gray To Gray ".

- Gray step: 5 Step
- TGTG_AVR is the total average time at rising time and falling time for "Gray To Gray".
- if system use ODC (Over Driving Circuit) function, Gray to Gary response time may be 5ms~8ms GtG * it depends on Overshoot rate.

Table. 10 GTG Gray Table

| Gray to G | Gray to Gray | | | Rising Time | | | | | | | | |
|--------------|--------------|------|------|-------------|----|--|--|--|--|--|--|--|
| Gray to G | G255 | G191 | G127 | G63 | G0 | | | | | | | |

| | G63 | | | | | | | | | | | |
| | G0 | · | · | · | | | | | | | | |

Ver 1.0 May, 24. 2016 20 / 34

- 5. Color shift is the angle at which the average color difference for all Macbeth is lower than 0.02. For more information see FIG.9 (By EZ Contrast)
 - Color difference (Δu'v')

$$u' = \frac{4x}{-2x + 12y + 3} \qquad v' = \frac{9y}{-2x + 12y + 3} \qquad \Delta u'v' = \sqrt{(u'_1 - u'_2)^2 + (v'_1 - v'_2)^2}$$

$$Avg(\Delta u'v') = \frac{\sum_{i=1}^{24} (\Delta u'v')i}{24}$$
 u'1, v'1 : u'v' value at viewing angle direction u'2, v'2 : u'v' value at front (0=0) i : Macbeth chart number (Define 23 page)

- Pattern size : 25% Box size

- Viewing angle direction of color shift: Horizontal, Vertical

- 6. Viewing angle is the angle at which the contrast ratio is greater than 10. The angles are determined for the horizontal or x axis and the vertical or y axis with respect to the z axis which is normal to the LCD surface. For more information see FIG.10 (By PR880)
- 7. Gamma Value is approximately 2.2. For more information see Table 11.

Measuring point for surface luminance & measuring point for luminance variation.

FIG.8 Measure Point for Luminance

Ver 1.0 May, 24. 2016 21 / 34

Color shift is defined as the following test pattern and color.

FIG.9 Color Shift Test Pattern

Average RGB values in Bruce RGB for Macbeth Chart

| | Dark skin (i=1) | Light skin | Blue sky | Foliage | Blue flower | Bluish green |

| 143 | 28.2 |
| 159 | 35.45 |
| 175 | 43.8 |
| 191 | 53.00 |
| 207 | 63.3 |
| 223 | 74.48 |
| 239 | 86.8 |
| 255 | 100 |

5. Mechanical Characteristics

The contents provide general mechanical characteristics. In addition the figures in the next page are detailed mechanical drawing of the LCD.

| | Horizontal | 396.0 mm | | | | |
|---------------------|--|------------|--|--|--|--|
| Outline Dimension | Vertical | 324.0 mm | | | | |
| | Depth | 9.9 mm | | | | |
| Bezel Area | Horizontal | 378.8 mm | | | | |
| Bezel Area | Vertical | 303.0 mm | | | | |
| Active Display Area | Horizontal | 374.784 mm | | | | |
| Active Display Area | Vertical | 299.827 mm | | | | |
| Weight | 1460 g(Typ.), 1535 g(Max) | | | | | |
| Surface Treatment | Hard coating(3H) Anti-Glare treatment of the front polarizer | | | | | |

Notes: Please refer to a mechanic drawing in terms of tolerance at the next page.

<FRONT VIEW>

6. Reliability

Environment test condition

| No | Test Item | Condition | Note |
|----|---|--|------|
| 1 | High temperature storage test | Ta= 60°C 240h | 1 |
| 2 | Low temperature storage test | Ta= -20°C 240h | 1 |
| 3 | High temperature operation test | Ta= 50°C 50%RH 240h | 1 |
| 4 | Low temperature operation test | Ta= 0°C 240h | 1 |
| 5 | Vibration test (non-operating) | Wave form: random Vibration level: 1.00G RMS Bandwidth: 10-300Hz Duration: X, Y, Z, 10 min One time each direction | |
| 6 | Shock test (non-operating) | Shock level : 100G Waveform : half sine wave, 2ms Direction : \pm X, \pm Y, \pm Z One time each direction | |
| 7 | Humidity condition Operation | Ta= 40 °C ,90%RH | |
| 8 | Altitude operating storage / shipment | 0 - 16,400 feet(5,000m) 0 - 40,000 feet(12,192m) | |
| 9 | Maximum Storage Humidity for 4 corner light leakage Mura. | Max 70%RH , Ta=40°C | |

Note 1. Result Evaluation Criteria:

TFT-LCD panels test should take place after cooling enough at room temperature . In the standard condition, there should be no particular problems that may affect the display function.

%. T_a = Ambient Temperature

9. PRECAUTIONS

Please pay attention to the followings when you use this TFT LCD module.

9-1. MOUNTING PRECAUTIONS

- (1) You must mount a module using holes arranged in four corners or four sides.
- (2) You should consider the mounting structure so that uneven force (ex. Twisted stress) is not applied to the module. And the case on which a module is mounted should have sufficient strength so that external force is not transmitted directly to the module.
- (3) Please attach the surface transparent protective plate to the surface in order to protect the polarizer. Transparent protective plate should have sufficient strength in order to the resist external force.
- (4) You should adopt radiation structure to satisfy the temperature specification.
- (5) Acetic acid type and chlorine type materials for the cover case are not desirable because the former generates corrosive gas of attacking the polarizer at high temperature and the latter causes circuit break by electro-chemical reaction.
- (6) Do not touch, push or rub the exposed polarizers with glass, tweezers or anything harder than HB pencil lead. And please do not rub with dust clothes with chemical treatment.

 Do not touch the surface of polarizer for bare hand or greasy cloth. (Some cosmetics are detrimental to the polarizer.)
- (7) When the surface becomes dusty, please wipe gently with absorbent cotton or other soft materials like chamois soaks with petroleum benzene. Normal-hexane is recommended for cleaning the adhesives used to attach front / rear polarizers. Do not use acetone, toluene and alcohol because they cause chemical damage to the polarizer.
- (8) Wipe off saliva or water drops as soon as possible. Their long time contact with polarizer causes deformations and color fading.
- (9) Do not open the case because inside circuits do not have sufficient strength.
- (10) As The IPS panel is sensitive & slim, please recommend the metal frame of the system supports the panel by the double side-mount.

9-2. OPERATING PRECAUTIONS

- (1) The spike noise causes the mis-operation of circuits. It should be lower than following voltage : $V=\pm 200$ mV(Over and under shoot voltage)
- (2) Response time depends on the temperature.(In lower temperature, it becomes longer.)
- (3) Brightness depends on the temperature. (In higher temperature, it becomes lower.)
- And in lower temperature, response time(required time that brightness is stable after turned on) becomes longer.
- (4) Be careful for condensation at sudden temperature change. Condensation makes damage to polarizer or electrical contacted parts. And after fading condensation, smear or spot will occur.
- (5) When fixed patterns are displayed for a long time, remnant image is likely to occur.
- (6) Module has high frequency circuits. Sufficient suppression to the electromagnetic interference shall be done by system manufacturers. Grounding and shielding methods may be important to minimized the interference.
- (7) Please do not give any mechanical and/or acoustical impact to LCM. Otherwise, LCM can't be operated its full characteristics perfectly.
- (8) A screw which is fastened up the steels should be a machine screw. (if not, it causes metallic foreign material and deal LCM a fatal blow)
- (9) Please do not set LCD on its edge.
- (10) When LCMs are used for public display defects such as Yogore, image sticking can not guarantee.
- (11) When this reverse model is used as a forward-type model(PCB on top side), LGD can not guarantee any defects of LCM.
- (12) LCMs cannot support "Interlaced Scan Method"
- (13) Please conduct image sticking test after 2-hour aging with Full white or Rolling PTN and normal temperature (25~40°C)

Ver 1.0 May, 24. 2016 33 / 34

9-3. ELECTROSTATIC DISCHARGE CONTROL

Since a module is composed of electronic circuits, it is not strong to electrostatic discharge. Make certain that treatment persons are connected to ground through wrist band etc. And don't touch interface pin directly.

9-4. PRECAUTIONS FOR STRONG LIGHT EXPOSURE

Strong light exposure causes degradation of polarizer and color filter.

9-5. STORAGE

When storing modules as spares for a long time, the following precautions are necessary.

- (1) Store them in a dark place. Do not expose the module to sunlight or fluorescent light. Keep the temperature between 5°C and 35°C at normal humidity.
- (2) The polarizer surface should not come in contact with any other object. It is recommended that they be stored in the container in which they were shipped.

9-6. HANDLING PRECAUTIONS FOR PROTECTION FILM

- (1) The protection film is attached to the bezel with a small masking tape.

 When the protection film is peeled off, static electricity is generated between the film and polarizer.

 This should be peeled off slowly and carefully by people who are electrically grounded and with well ion-blown equipment or in such a condition, etc.
- (2) When the module with protection film attached is stored for a long time, sometimes there remains a very small amount of glue still on the bezel after the protection film is peeled off.
- (3) You can remove the glue easily. When the glue remains on the bezel surface or its vestige is recognized, please wipe them off with absorbent cotton waste or other soft material like chamois soaked with normal-hexane.

Ver 1.0 May, 24. 2016 34 / 34
