1. General Description

The LP116WH6 is a Color Active Matrix Liquid Crystal Display with an integral LED backlight system. The matrix employs a-Si Thin Film Transistor as the active element. It is a transmissive type display operating in the normally black mode. This TFT-LCD has 11.6 inches diagonally measured active display area with HD resolution (1366 horizontal by 768 vertical pixel array). Each pixel is divided into Red, Green and Blue sub-pixels or dots which are arranged in vertical stripes. Gray scale or the brightness of the sub-pixel color is determined with a 6-bit gray scale signal for each dot, thus, presenting a palette of more than 262,144 colors. The LP116WH6 has been designed to apply the interface method that enables low power, high speed, low EMI. The LP116WH6 is intended to support applications where thin thickness, low power are critical factors and graphic displays are important. In combination with the vertical arrangement of the sub-pixels, the LP116WH6 characteristics provide an excellent flat display for office automation products such as Notebook PC.
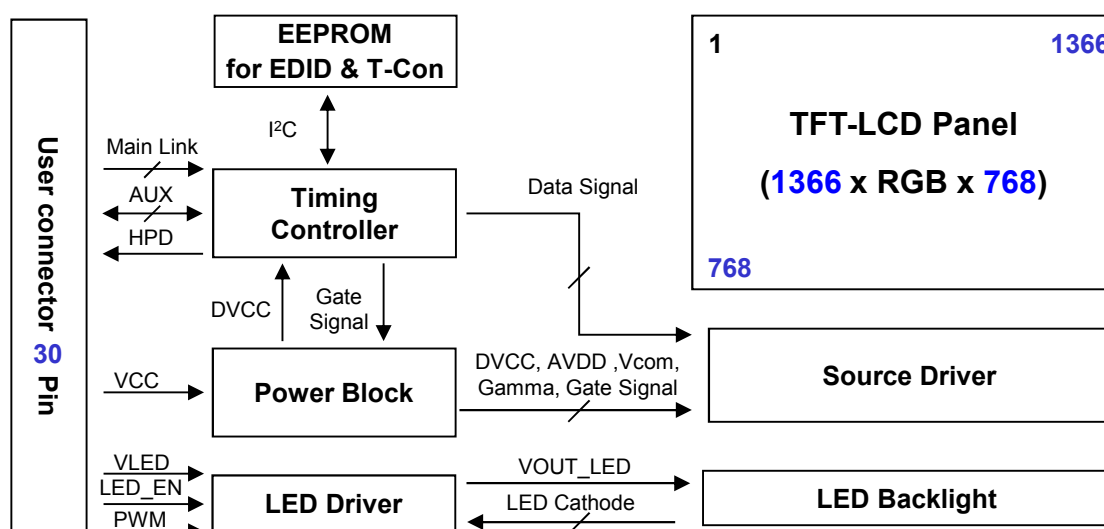

General Features

Active Screen Size	11.6 inches diagonal
Outline Dimension	268.9(H, Typ.) x 158.0(V, Typ.) x 3.0(D,Max) [mm]
Pixel Pitch	0.1875mm x 0.1875mm
Pixel Format	1366 horiz. By 768 vert. Pixels RGB strip arrangement
Color Depth	6-bit, 262,144 colors
Luminance, White	300 cd/m²(Typ.5point)
Power Consumption	Total 3.95 Watt (Typ.) @ Mosaic Logic input 0.85Watt (Typ.), B/L input 3.10 Watt (Typ.)
Weight	200g (Max.)
Display Operating Mode	Transmissive mode, normally black
Surface Treatment	HC on Top , AG 25% on Bottom
RoHS Comply	Yes
BFR / PVC / As Free	Yes for all

2. Absolute Maximum Ratings

The following are maximum values which, if exceeded, may cause faulty operation or damage to the unit.

Note)

1. The measuring position is the connector of LCM and the test conditions are under 25℃.

2. The current and power consumption with LED Driver are under the V_{LED} = 12.0V , 25℃, PWM Duty 100% and White pattern with the normal frame frequency operated(60Hz).

3. The V_{LED} rising time is same as the minimum of T13 at Power on sequence.

4. The operation of LED Driver below minimum dimming ratio may cause flickering or reliability issue.

5. If Jitter of PWM is bigger than maximum, it may induce flickering.

6. This Spec. is not effective at 100% dimming ratio as an exception because it has DC level equivalent to 0Hz. In spite of acceptable range as defined, the PWM Frequency should be fixed and stable for more consistent brightness control at any specific level desired.

7. The life time is determined as the time at which brightness of LCD is 50% compare to that of minimum value specified in table 7. under general user condition.

Note)
1. HPD IRQ : Sink device wants to notify the Source device that Sink's status has changed so it toggles HPD line, forcing the Source device to read its Link / Sink Receiver DPCD field via the AUX-CH
2. HPD Unplug : The Sink device is no longer attached to the Source device and the Source device may then disable its Main Link as a power saving mode
3. Plug / Re-plug : The Sink device is now attached to the Source device, forcing the Source device to read its Receiver capabilities and Link / Sink status Receiver DPCD fields via the AUX-CH

## 3-5. Signal Timing Specifications

This is the signal timing required at the input of the User connector. All of the interface signal timing should be satisfied with the following specifications and specifications of eDP Tx/Rx for its proper operation.

Table 4. TIMING TABLE

ITEM	Symbol		Min	Typ	Max	Unit	Note

	Vertical front porch	t_{VFP}	2	3	4		

Notice. all reliabilities are specified for timing specification based on refresh rate of 60Hz. However, LP116WH6 has a good actual performance even at lower refresh rate (e.g. 40Hz or 50Hz) for power saving Mode, whereas LP116WH6 is secured only for function under lower refresh rate. 60Hz at Normal mode, 50Hz, 40Hz at Power save mode. Don't care Flicker level (Power save mode).

4. Optical Specification

Optical characteristics are determined after the unit has been 'ON' and stable for approximately 20 minutes in a dark environment at 25°C. The values specified are at an approximate distance 50cm from the LCD surface at a viewing angle of Φ and Θ equal to 0°.
FIG. 1 presents additional information concerning the measurement equipment and method.

Product Specification

Note)

1. It should be measured in the center of screen(1 Point). Contrast Ratio(CR) is defined mathematically as

$$\text{Contrast Ratio(1 Point)} = \frac{\text{Surface Luminance with all white pixels}}{\text{Surface Luminance with all black pixels}}$$

2. Surface luminance is the average of 5 point across the LCD surface 50cm from the surface with all pixels displaying white. For more information see FIG 2.

$$L_{WH} = \text{Average}(1, 2, \ldots 5 \text{ Point})$$

3. The variation in surface luminance , The panel total variation (δ WHITE) is determined by measuring N at each test position 1 through 13 and then defined as following numerical formula. For more information see FIG 2.

$$\delta \text{ WHITE (5P)} = \frac{\text{Maximum }(1, 2, \ldots 5 \text{ Point})}{\text{Minimum }(1, 2, \ldots 5 \text{ Point})} \qquad \delta \text{ WHITE (13P)} = \frac{\text{Maximum }(1, 2, \ldots 13 \text{ Point})}{\text{Minimum }(1, 2, \ldots 13 \text{ Point})}$$

4. Response time is the time required for the display to transition from black to white (rise time, Tr) and from white to black (falling time, Tf). For additional information see FIG 3.

5. Viewing angle is the angle at which the contrast ratio is greater than 10. The angles are determined for the horizontal or x axis and the vertical or y axis with respect to the z axis which is normal to the LCD surface. For more information see FIG 4.

6. Reliability

Environment test condition

No.	Test Item	Conditions
1	High temperature storage test	Ta= 60°C, 240h
2	Low temperature storage test	Ta= -20°C, 240h
3	High temperature operation test	Ta= 50°C, 50%RH, 240h
4	Low temperature operation test	Ta= 0°C, 240h
5	Vibration test (non-operating)	Random, 1.0Grms, 10 ~ 300Hz(PSD 0.0035) 3 axis, 30min/axis
6	Shock test (non-operating)	- No functional or cosmetic defects following a shock to all 6 sides delivering at least 180 G in a half sine pulse no longer than 2 ms to the display module - No functional defects following a shock delivering at least 200 g in a half sine pulse no longer than 2 ms to each of 6 sides. Each of the 6 sides will be shock tested with one each display, for a total of 6 displays
7	Altitude operating storage / shipment	0 ~ 10,000 feet (3,048m) 24Hr 0 ~ 40,000 feet (12,192m) 24Hr

{ Result Evaluation Criteria }
There should be no change which might affect the practical display function when the display quality test is conducted under normal operating condition.

9. PRECAUTIONS

Please pay attention to the followings when you use this TFT LCD module.

9-1. MOUNTING PRECAUTIONS

(1) You must mount a module using holes arranged in four corners or four sides.
(2) You should consider the mounting structure so that uneven force (ex. Twisted stress) is not applied to the module. And the case on which a module is mounted should have sufficient strength so that external force is not transmitted directly to the module.
(3) Please attach the surface transparent protective plate to the surface in order to protect the polarizer. Transparent protective plate should have sufficient strength in order to the resist external force.
(4) You should adopt radiation structure to satisfy the temperature specification.
(5) Acetic acid type and chlorine type materials for the cover case are not desirable because the former generates corrosive gas of attacking the polarizer at high temperature and the latter causes circuit break by electro-chemical reaction.
(6) Do not touch, push or rub the exposed polarizers with glass, tweezers or anything harder than HB pencil lead. And please do not rub with dust clothes with chemical treatment. Do not touch the surface of polarizer for bare hand or greasy cloth.(Some cosmetics are detrimental to the polarizer.)
(7) When the surface becomes dusty, please wipe gently with absorbent cotton or other soft materials like chamois soaks with petroleum benzene. Normal-hexane is recommended for cleaning the adhesives used to attach front / rear polarizers. Do not use acetone, toluene and alcohol because they cause chemical damage to the polarizer.
(8) Wipe off saliva or water drops as soon as possible. Their long time contact with polarizer causes deformations and color fading.
(9) Do not open the case because inside circuits do not have sufficient strength.

9-2. OPERATING PRECAUTIONS

(1) The spike noise causes the mis-operation of circuits. It should be lower than following voltage :
    V=± 200mV(Over and under shoot voltage)

(2) Response time depends on the temperature.(In lower temperature, it becomes longer.)
(3) Brightness depends on the temperature. (In lower temperature, it becomes lower.)
    And in lower temperature, response time(required time that brightness is stable after turned on) becomes longer.
(4) Be careful for condensation at sudden temperature change. Condensation makes damage to polarizer or electrical contacted parts. And after fading condensation, smear or spot will occur.
(5) When fixed patterns are displayed for a long time, remnant image is likely to occur.
(6) Module has high frequency circuits. Sufficient suppression to the electromagnetic interference shall be done by system manufacturers. Grounding and shielding methods may be important to minimized the interference.

9-3. ELECTROSTATIC DISCHARGE CONTROL

Since a module is composed of electronic circuits, it is not strong to electrostatic discharge. Make certain that treatment persons are connected to ground through wrist band etc. And don't touch interface pin directly.

9-4. PRECAUTIONS FOR STRONG LIGHT EXPOSURE

Strong light exposure causes degradation of polarizer and color filter.

9-5. STORAGE

When storing modules as spares for a long time, the following precautions are necessary.

(1) Store them in a dark place. Do not expose the module to sunlight or fluorescent light. Keep the temperature between 5°C and 35°C at normal humidity.
(2) The polarizer surface should not come in contact with any other object.
It is recommended that they be stored in the container in which they were shipped.
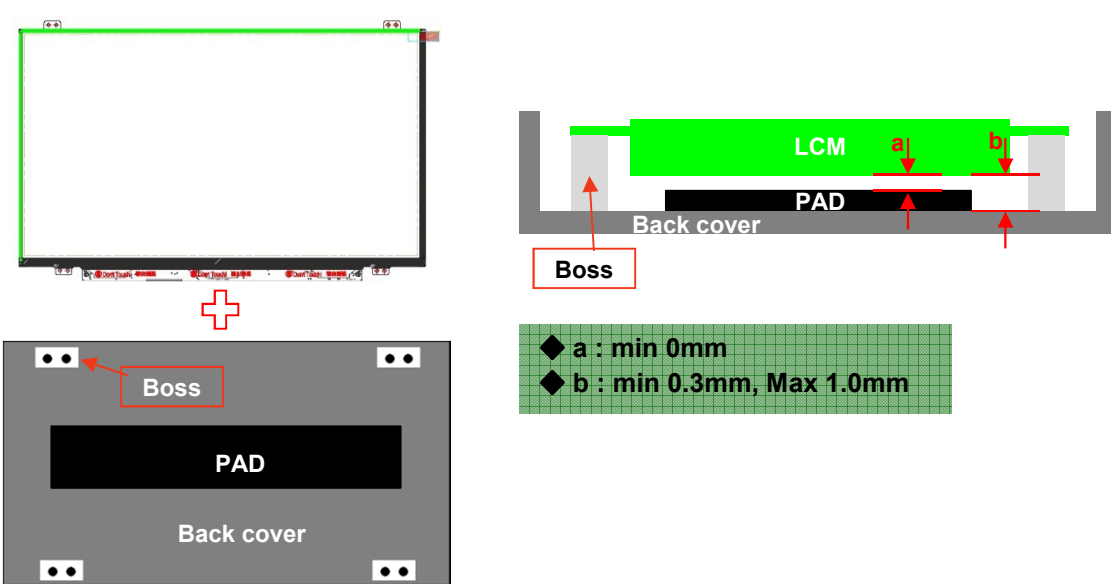

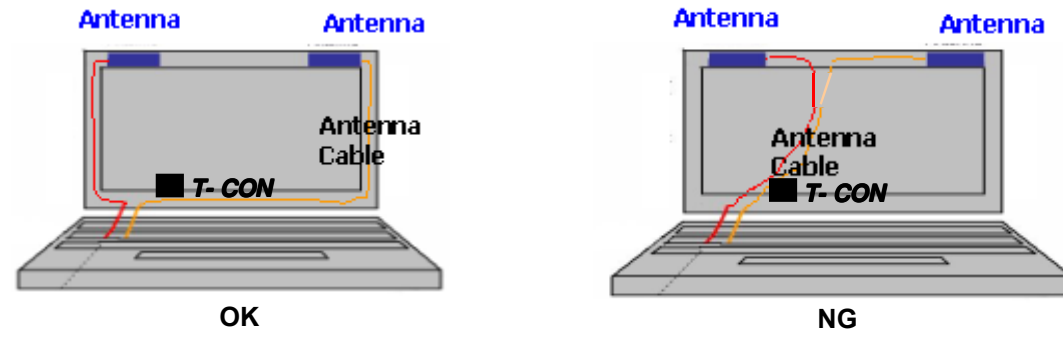

9-6. HANDLING PRECAUTIONS FOR PROTECTION FILM

(1) When the protection film is peeled off, static electricity is generated between the film and polarizer.
This should be peeled off slowly and carefully by people who are electrically grounded and with well ion-blown equipment or in such a condition, etc.
(2) The protection film is attached to the polarizer with a small amount of glue. If some stress is applied to rub the protection film against the polarizer during the time you peel off the film, the glue is apt to remain on the polarizer.
Please carefully peel off the protection film without rubbing it against the polarizer.
(3) When the module with protection film attached is stored for a long time, sometimes there remains a very small amount of glue still on the polarizer after the protection film is peeled off.
(4) You can remove the glue easily. When the glue remains on the polarizer surface or its vestige is recognized, please wipe them off with absorbent cotton waste or other soft material like chamois soaked with normal-hexane.
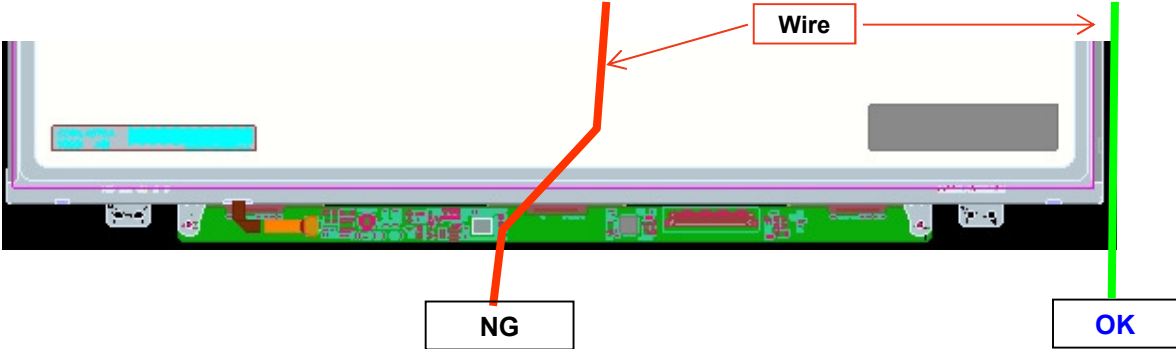

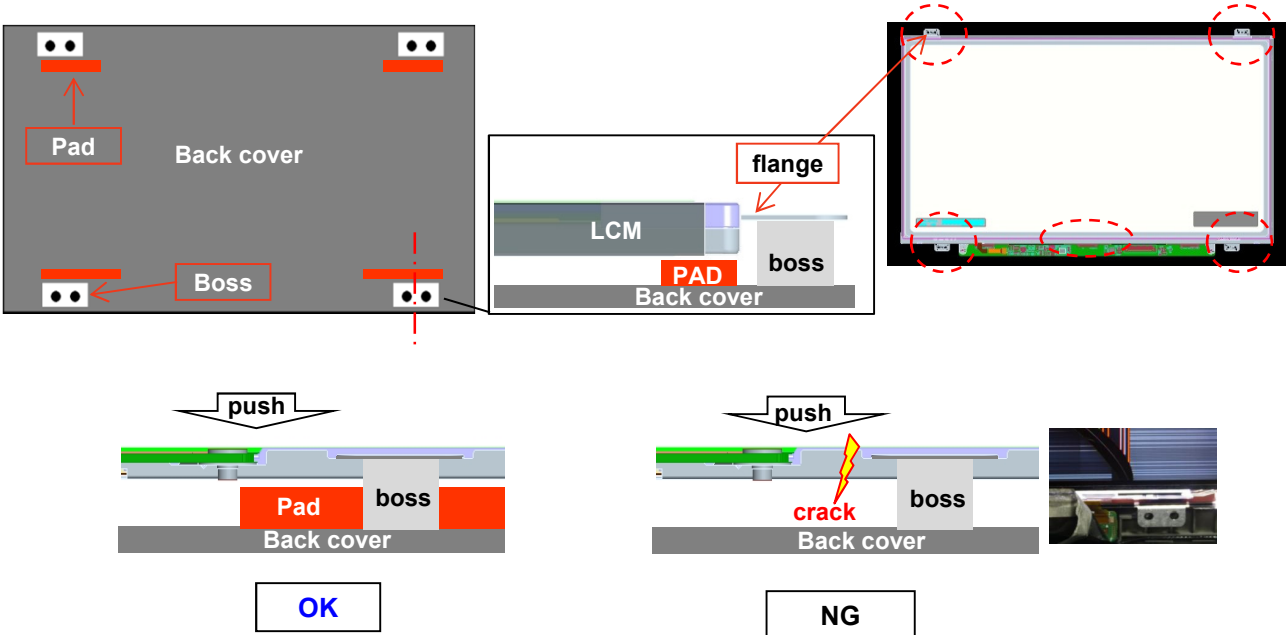

9-7. THE LGD QA RESPONSIBILITY WILL BE AVOIDED IN CASE OF BELOW

(1) When the customer attaches TSM(Touch Sensor Module) on LCM without Supplier's approval.
(2) When the customer attaches cover glass on LCM without Supplier's approval.
(3) When the LCMs were repaired by 3rd party without Supplier's approval.
(4) When the LCMs were treated like Disassemble and Rework by the Customer and/or Customer's representatives without supplier's approval.

APPENDIX A. LGD Proposal for system cover design

1	Gap check for securing the enough gap between LCM and System back cover.

◆ a : min 0mm
◆ b : min 0.3mm, Max 1.0mm

Define	1. Rear side of LCM is sensitive against external stress, and previous check about interference is highly needed.
	2. In case there is something from system cover comes into the boundary above, mechanical interference may cause the FOS defects. (e.g.. Ripple, White spot..)

2	Check if antenna cable is sufficiently apart from T-CON of LCD Module.

OK   NG

Define	If system antenna is overlapped with T-CON, It might be cause the noise

Product Specification
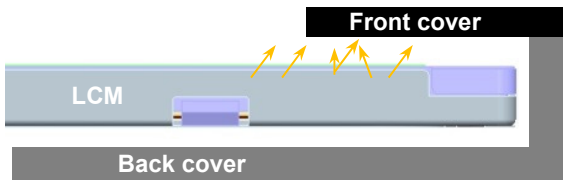

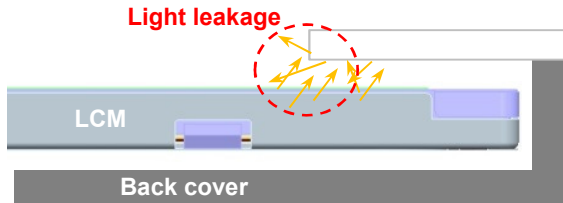

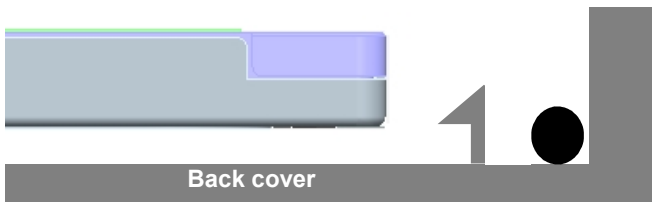

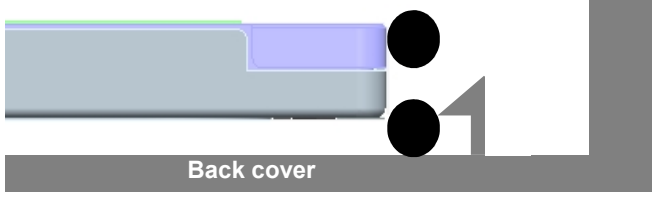

APPENDIX A. LGD Proposal for system cover design

3	Checking the path of the System wire

| Define | 1. If Wire path overlapped with LCM, it is happened white spot. COF problem, etc. |
| | 2. OK ➔ Wire path design to system side.
NG ➔ Wire path overlapped with LCM. |

4	Add pad to Prevent panel crack against external load (push)

| Define | 1. At flat type LCM, panel is easily cracked at flange area during push, assemble. |
| | 2. Add pad, it prevent panel crack |

Product Specification

APPENDIX A. LGD Proposal for system cover design
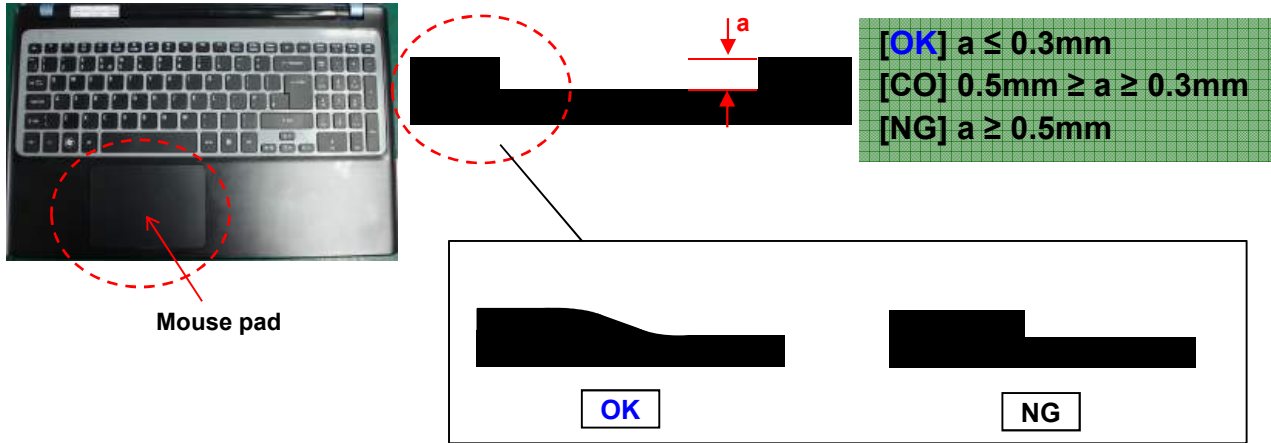

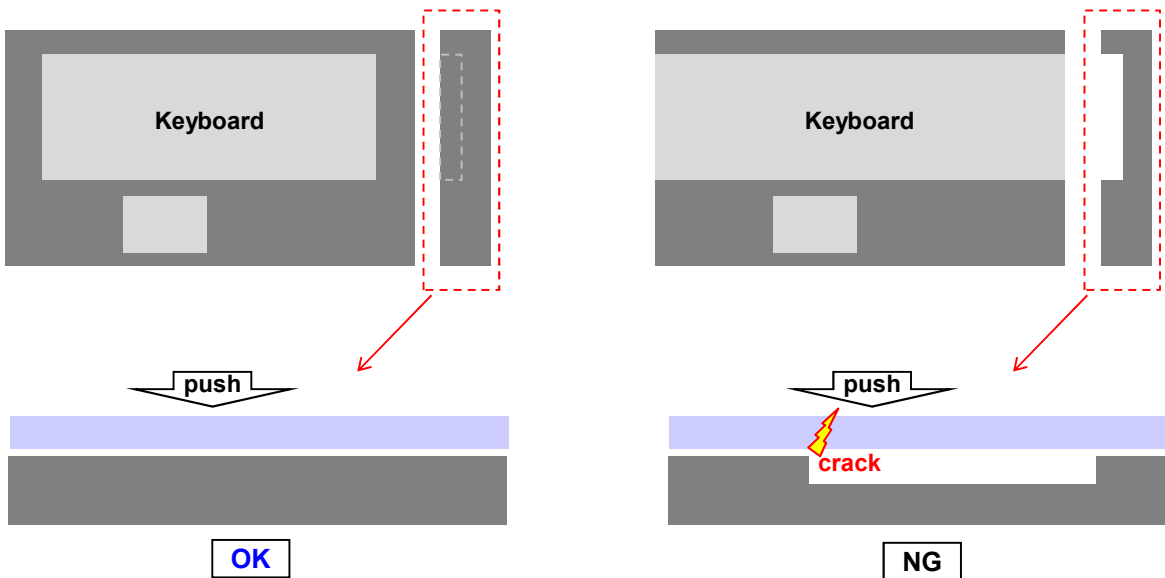

5	Check the rib or Bracket on back cover

| Define | 1.It is necessary that the height of back cover rib or bracket is higher than LCM height. It can prevent direct compression of panel at LCM edge. |
| | 2."¬" shape bracket is stronger than "I" shape one. |

6	Check the gap between front cover and LCM (glass)

[OK] a ≥ 0.3mm
[CO] 0.3mm ≥ a ≥ 0.1mm
[NG] a ≤ 0.1mm

| Define | Ripple can be happened by little gap between glass and front cover. |

LG Display

Product Specification

APPENDIX A. LGD Proposal for system cover design

7	Check the rib or Bracket on back cover

Define	1.If it is possible, shrink to apply front cover of white color.
	2. White color can caused light leakage

8	Check the wire position(path)

Define	1. It is necessary that wire is posited out of hook, not posited near hook,.
	2. If wire is posited near hook, it can be happened assemble error and panel crack during assemble front cover

LG Display

APPENDIX A. LGD Proposal for system cover design
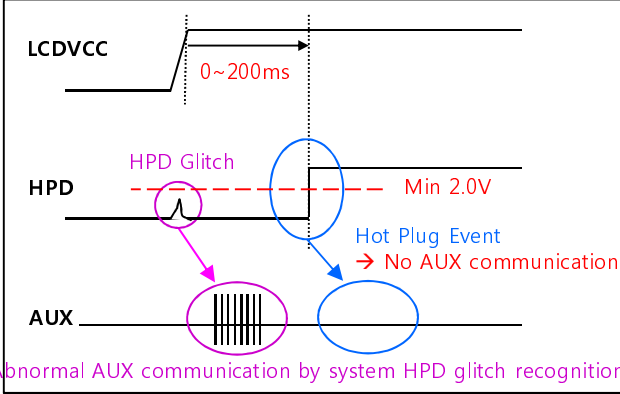

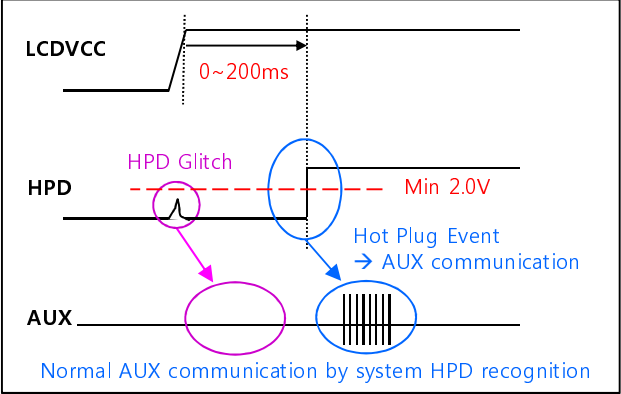

9	Check mouse pad (touch pad) depth and shape of edge

Mouse pad

[OK] a ≤ 0.3mm
[CO] 0.5mm ≥ a ≥ 0.3mm
[NG] a ≥ 0.5mm

OK   NG

Define	1.Mouse pad step is deep, it is caused panel crack by external load.
	2. The edge shape must be smooth.

10	Check the step of keyboard area

Keyboard

Keyboard

push   push

crack

OK   NG

| Define	The step of keyboard at the side edge of main body, it is caused panel crack

Product Specification

APPENDIX A. LGD Proposal for system cover design

| 11	Check the gap [PCB ~ system]

a ≥ 0.5mm [at max dimension of design]

a ≥ 1.0mm [at typical dimension of design]

Define	1. Gap is too small, FPC is easily cracked by interference and repetitive bending. (circuit is opened) .
	2. Gap is must be kept more than 0.5mm(max dim.) and 1.0mm(typ dim.) .

12	System rib (on A cover)

OK

NG

a ≥ 0.5mm [at max dimension of design]

a ≥ 1.0mm [at typical dimension of design]

Define	1. Gap is too small and rib is too short, panel is easily cracked by external stress.
	2. Gap is must be kept more than 0.5mm(max dim.) and 1.0mm(typ dim.) .
	3. The figure of rib is continuous or fully long.

APPENDIX B. LGD Proposal for eDP Interface Design Guide

1	HPD Signal recognition

[Abnormal Communication By HPD Glitch]　　　[Normal Communication By HPD Signal]

Define	1. Hot Plug Detection (HPD) Threshold level of Source Device is minimum 2.0V
	2. HPD Unplug : HPD pulse stays low longer than 2ms. 　　　　　　DP Tx shall wait for HPD signal to go high again.
	3. "HPD High" is confirmed only after HPD has been asserted continuously for 100msec.

2	IRQ (Interrupt Request) HPD Pulse Definition

Ex) HPD Pulse

Define	Upon detection this "HPD IRQ Event"(0.5ms ~ 1ms) ,the source device must read the link / sink status field of the DPCD and take corrective action.

3	Main Link EYE Diagram

[EYE Diagram]

350mV / 214.8ps eye mask
Point	UI	Voltage (Volts)
1	0.210	0.000
2	0.355	0.140
3	0.500	0.175
4	0.645	0.175
5	0.790	0.000
6	0.645	-0.175
7	0.500	-0.175
8	0.355	-0.140

[EYE Vertices for TP2 at HBR]

150mV / 188.5ps eye mask
Point	UI	Voltage (Volts)
1	0.246	0.000
2	0.500	0.075
3	0.755	0.000
4	0.500	-0.075

[EYE Vertices for TP3 at HBR]

Define	Main Link EYE Diagram should meet TP2 and TP3 point

4	Cable Impedance management
Segment	Differential Impedance	Maximum Tolerance
Fixture	100 Ω	
Connector	100 Ω	+/- 10%
Wire management	100 Ω	
Cable	100 Ω	+/- 5%

Define	Cable Impedance 100 Ω +/- 5% (95Ω ~ 105Ω)

Product Specification

APPENDIX B. LGD Proposal for eDP Interface Design Guide

5	Main Link Off vs. LCD Power Off at Non-PSR
Timing Parameter	Description	Required By	Min	Max
T10	Delay from end of valid video from Source to Power Off	Source	0ms	500ms

* LGD recommend that Source must power off the LCDVCC if Main Link off like below.

[Case1. Resolution Change]
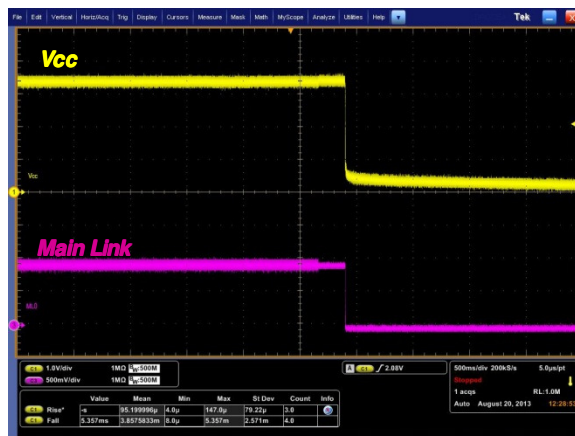

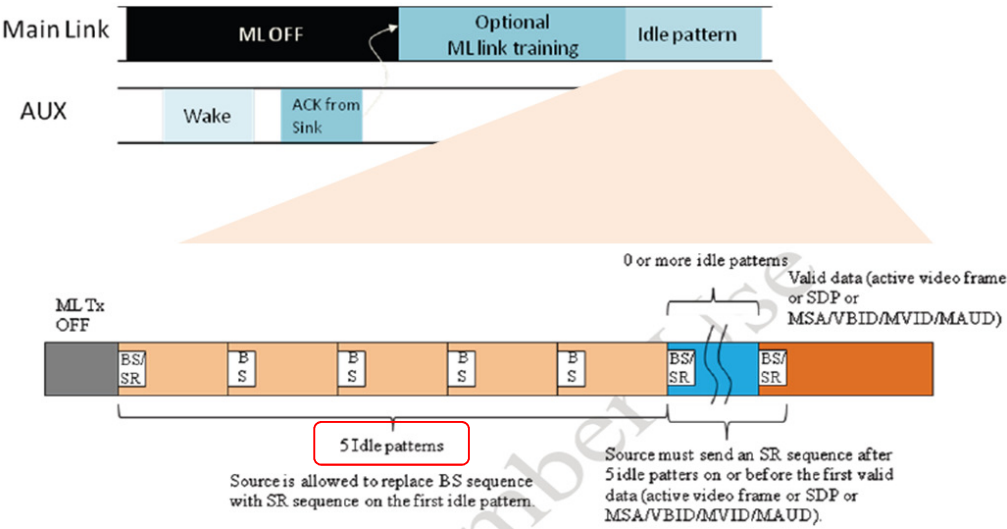

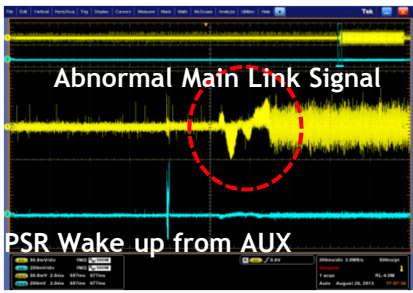

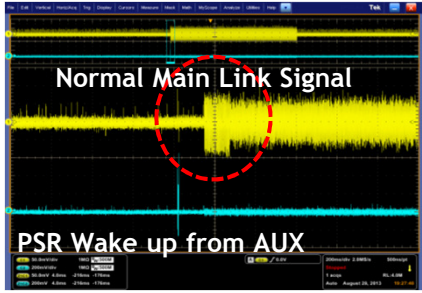

[Case2. Close the Lid]

Define	If Main Link off signal from Source, then LCDVCC must be Power Off within T10 period at Non-PSR mode

Product Specification

APPENDIX B. LGD Proposal for eDP Interface Design Guide

6	PSR Exit

Define	Source must send 5 or more idle patterns before the first valid data (active video frame or SDP or MSA/VBID/MVID/MAUD)

7	Main Link Noise at PSR Exit

[Abnormal Main Link Noise]   [Normal Main Link Signal]

Define	Main Link Noise at PSR Exit mode can be a cause abnormal display.
