## **1. General Description**

The LP141WP2 is a Color Active Matrix Liquid Crystal Display with an integral LED backlight system. The matrix employs a-Si Thin Film Transistor as the active element. It is a transmissive type display operating in the normally white mode. This TFT-LCD has 14.1 inches diagonally measured active display area with WXGA+ resolution(1440 horizontal by 900 vertical pixel array). Each pixel is divided into Red, Green and Blue sub-pixels or dots which are arranged in vertical stripes. Gray scale or the brightness of the sub-pixel color is determined with a 6-bit gray scale signal for each dot, thus, presenting a palette of more than 262,144 colors.

The LP141WP2 has been designed to apply the interface method that enables low power, high speed, low EMI.

The LP141WP2 is intended to support applications where thin thickness, low power are critical factors and graphic displays are important. In combination with the vertical arrangement of the sub-pixels, the LP141WP2 characteristics provide an excellent flat display for office automation products such as Notebook PC.

#### **General Features**

Active Screen Size	14.1 inches diagonal
Outline Dimension	320.0 (H) × 207.0 (V) × 5.5(D, max.) mm
Pixel Pitch	0.2106 mm × 0.2106 mm
Pixel Format	1440 horiz. by 900 vert. Pixels RGB strip arrangement
Color Depth	6-bit, 262,144 colors
Luminance, White	300 cd/m²(Typ., @I <sub>LED</sub> =19mA) , 5 points Average
Power Consumption	Total 5.45Watt @ LCM circuit 1.55W(Typ.), B/L 3.3 W (Typ.), LED Driver 0.6W(Typ.)
Weight	375g(Max.)
Display Operating Mode	Transmissive mode, normally white
Surface Treatment	Hard coating(3H) Anti Glare treatment of the front polarizer
RoHS Comply	Yes

Ver. 0.0

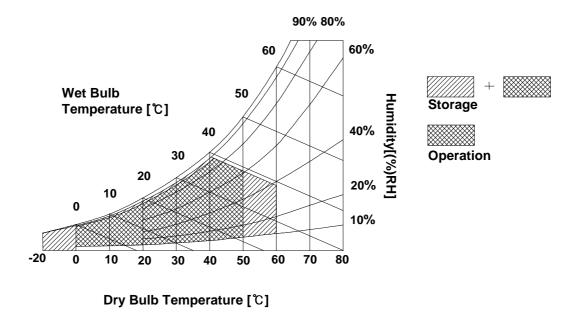

## 2. Absolute Maximum Ratings

The following are maximum values which, if exceeded, may cause faulty operation or damage to the unit.

Parameter	Symbol	Val	ues	Units	Notes
Falanletei	Symbol	Min	Max	Units	Notes
Power Input Voltage	VCC	-0.3	4.0	Vdc	at 25 $\pm$ 5°C
Operating Temperature	Тор	0	50	°C	1
Storage Temperature	Нѕт	-20	60	°C	1
Operating Ambient Humidity	Нор	10	90	%RH	1
Storage Humidity	Нѕт	10	90	%RH	1

### Table 1. ABSOLUTE MAXIMUM RATINGS

Note : 1. Temperature and relative humidity range are shown in the figure below. Wet bulb temperature should be 39°C Max, and no condensation of water.

## **3. Electrical Specifications**

## 3-1. Electrical Characteristics

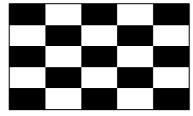

The LP141WP2 requires two power inputs. One is employed to power the LCD electronics and to drive the TFT array and liquid crystal. The second input which powers the LED BL.

Parameter	Symphol		Values		Unit	Notes
Parameter	Symbol	Min	Тур	Max	Unit	notes
MODULE :						
Power Supply Input Voltage	VCC	3.0	3.3	3.6	V <sub>DC</sub>	
Power Supply Input Current	I <sub>cc</sub>	400	470	540	mA	1
Power Consumption	Pc	-	1.55	1.78	Watt	1
Differential Impedance	Zm	90	100	110	Ohm	2
LED Backlight :						
Operating Voltage	V <sub>LED</sub>	-	28.8	30.6	V	3
Operating Current per string	I <sub>LED</sub>	-	19	-	mA	4
Power Consumption	P <sub>BL</sub>		3.3	3.5	Watt	5
Life Time	[	10,000	-	-	Hrs	6

Table 2. ELE	CTRICAL CHARACTERISTICS
--------------	-------------------------

#### Note)

1. The specified current and power consumption are under the Vcc = 3.3V, 25 °C, fv = 60Hz condition whereas Mosaic pattern is displayed and fv is the frame frequency.

- 2. This impedance value is needed to proper display and measured form LVDS Tx to the mating connector.
- 3. The variance of the voltage is  $\pm$  10%.
- 4. The typical operating current is for the typical surface luminance ( $L_{WH}$ ) in optical characteristics.  $I_{LED}$  is the current of each LEDs' string, LED backlight has 6 strings on it.
- The LED power consumption shown above does not include power of external LED driver circuit for typical current condition.
- 6. The life time is determined as the time at which brightness of LED is 50% compare to that of initial value at the typical LED current.

## 3-2. Interface Connections

This LCD employs two interface connections, a 50 pin connector is used for the module electronics interface and the other connector is used for the internal backlight system. The electronics interface connector is a model FI-VHP50S manufactured by JAE.

Pin	Symbol	Description	Notes
1	Test Loop	Test Loop (only to pin 30)	1, Interface chips 1.1 LCD : SW, ST2_BS (LCD Controller)

#### Note)

- 1. Valid Data is Data to meet "3-3. LVDS Signal Timing Specifications"
- 2. Please avoid floating state of interface signal at invalid period.
- 3. When the interface signal is invalid, be sure to pull down the power supply for LCD VCC to 0V.
- 4. Lamp power must be turn on after power supply for LCD and interface signal are valid.

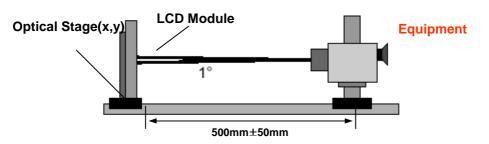

# **LG** Display

**Product Specification** 

# 4. Optical Specification

Optical characteristics are determined after the unit has been 'ON' and stable for approximately 20 minutes in a dark environment at 25°C. The values specified are at an approximate distance 50cm from the LCD surface at a viewing angle of  $\Phi$  and  $\Theta$  equal to 0°.

FIG. 1 presents additional information concerning the measurement equipment and method.

## FIG. 1 Optical Characteristic Measurement Equipment and Method

### Table 8. OPTICAL CHARACTERISTICS

Ta=25°C, VCC=3.3V, fv=60Hz,  $f_{CLK}$ = 102MHz,  $I_{LED}$  = 19mA

Deremeter	Symbol		Values		Units	Notes
Parameter	Symbol	Min	Тур	Тур Мах		notes
Contrast Ratio	CR	300	-	-		1
Surface Luminance, white	L <sub>WH</sub>	250	300	-	cd/m <sup>2</sup>	2
Luminance Variation(13points)	$\delta_{\text{WHITE}}$		1.4	1.6	]	3
Response Time	$\mathrm{Tr}_{\mathrm{R}}$ + $\mathrm{Tr}_{\mathrm{D}}$		16	25	ms	4
Color Coordinates					]	
RED	RX	0.547	0.577	0.607	1	
	RY	0.319	0.349	0.379		
GREEN	GX	0.299	0.329	0.359		
	GY	0.520	0.550	0.580		
BLUE	BX	0.132	0.162	0.192		
	BY	0.103	0.133	0.163		
WHITE	WX	0.283	0.313	0.343		+/- 0.030
	WY	0.299	0.329	0.359		+/- 0.030
Viewing Angle						5
x axis, right( $\Phi$ =0°)	Θr	40	45		degree	
x axis, left ( $\Phi$ =180°)	ΘΙ	40	45	-	degree	
y axis, up ( $\Phi$ =90°)	Θu	10	15	-	degree	
y axis, down ( $\Phi$ =270°)	Θd	30	35	-	degree	
Gray Scale				-		6

Notes)

1. Contrast Ratio(CR) is defined mathematically as Surface Luminance with all white pixels

Contrast Ratio =

Surface Luminance with all black pixels

- Surface luminance is the 5point (1~5)average across the LCD surface 50cm from the surface with all pixels displaying white. For more information see FIG 2. When I<sub>LED</sub>= 19mA, L<sub>WH</sub>=300cd/m<sup>2</sup>(Typ.)
- 3. Luminance variation is measured for 13 point For more information see FIG 2. δ WHITE = Maximum(LN1,LN2, ..... LN13) ÷ Minimum(LN1,LN2, ..... LN13)
- Response time is the time required for the display to transition from white to black (rise time, Tr<sub>R</sub>) and from black to white(Decay Time, Tr<sub>D</sub>). For additional information see FIG 3.
- 5. Viewing angle is the angle at which the contrast ratio is greater than 10. The angles are determined for the horizontal or x axis and the vertical or y axis with respect to the z axis which is normal to the LCD surface. For more information see FIG 4.
- 6. Gray scale specification

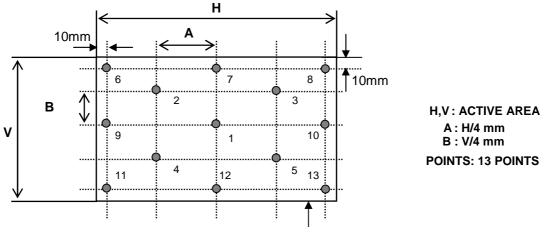

\* f<sub>v</sub>=60Hz

Gray Level	Luminance [%] (Typ)
LO	0.33
L7	1.47
L15	4.5
L23	10.7
L31	19.9
L39	33.0
L47	50.8
L55	73.0
L63	100

#### FIG. 2 Luminance

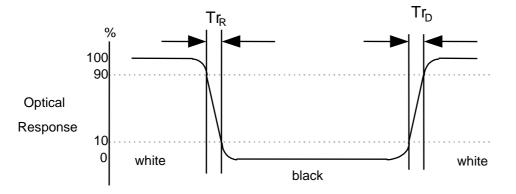

<Measuring point for Average Luminance & measuring point for Luminance variation>

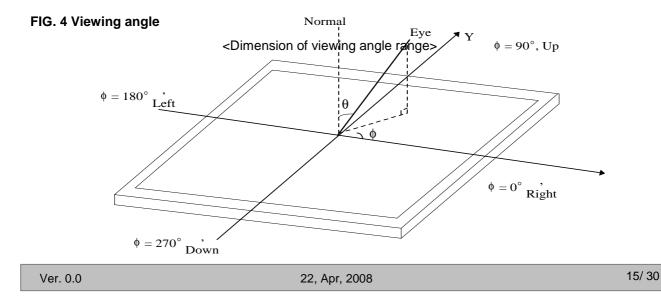

#### FIG. 3 Response Time

Active Area

The response time is defined as the following figure and shall be measured by switching the input signal for "black" and "white".

## **5. Mechanical Characteristics**

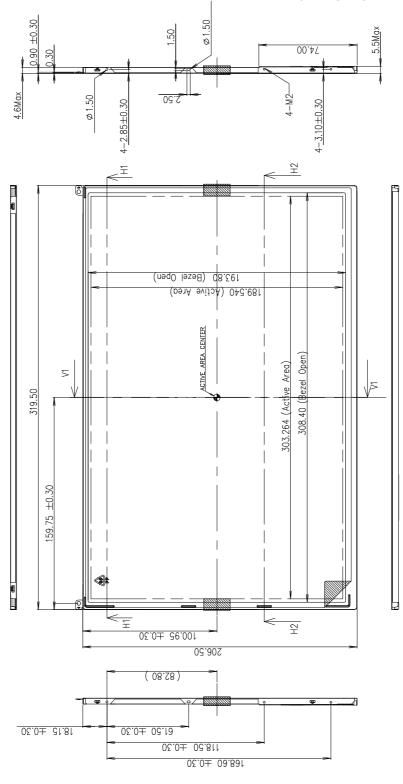

The contents provide general mechanical characteristics for the model LP141WP2. In addition the figures in the next page are detailed mechanical drawing of the LCD.

	Horizontal	$319.5\pm0.50\text{mm}$		
Outline Dimension	Vertical	$206.5\pm0.50\text{mm}$		
	Depth	5.5mm(Max.)		
Bezel Area	Horizontal	308.4mm		
Dezer Area	Vertical	193.8mm		
Active Display Area	Horizontal	303.264mm		
Active Display Area	Vertical	189.54 mm		
Weight	375g (Max.)			
Surface Treatment	Hard coating(3H) Anti Glare treatment of the front polarizer

- b) Box Size : 490mm X 393mm X 287mm

# 9. PRECAUTIONS

Please pay attention to the followings when you use this TFT LCD module.

# 9-1. MOUNTING PRECAUTIONS

- (1) You must mount a module using holes arranged in four corners or four sides.
- (2) You should consider the mounting structure so that uneven force (ex. Twisted stress) is not applied to the module. And the case on which a module is mounted should have sufficient strength so that external force is not transmitted directly to the module.
- (3) Please attach the surface transparent protective plate to the surface in order to protect the polarizer. Transparent protective plate should have sufficient strength in order to the resist external force.
- (4) You should adopt radiation structure to satisfy the temperature specification.
- (5) Acetic acid type and chlorine type materials for the cover case are not desirable because the former generates corrosive gas of attacking the polarizer at high temperature and the latter causes circuit break by electro-chemical reaction.
- (6) Do not touch, push or rub the exposed polarizers with glass, tweezers or anything harder than HB pencil lead. And please do not rub with dust clothes with chemical treatment. Do not touch the surface of polarizer for bare hand or greasy cloth.(Some cosmetics are detrimental to the polarizer.)
- (7) When the surface becomes dusty, please wipe gently with absorbent cotton or other soft materials like chamois soaks with petroleum benzene. Normal-hexane is recommended for cleaning the adhesives used to attach front / rear polarizers. Do not use acetone, toluene and alcohol because they cause chemical damage to the polarizer.
- (8) Wipe off saliva or water drops as soon as possible. Their long time contact with polarizer causes deformations and color fading.
- (9) Do not open the case because inside circuits do not have sufficient strength.

# 9-2. OPERATING PRECAUTIONS

- (1) The spike noise causes the mis-operation of circuits. It should be lower than following voltage :  $V=\pm 200 \text{mV}(\text{Over and under shoot voltage})$
- (2) Response time depends on the temperature.(In lower temperature, it becomes longer.)
- (3) Brightness depends on the temperature. (In lower temperature, it becomes lower.) And in lower temperature, response time(required time that brightness is stable after turned on) becomes longer.
- (4) Be careful for condensation at sudden temperature change. Condensation makes damage to polarizer or electrical contacted parts. And after fading condensation, smear or spot will occur.
- (5) When fixed patterns are displayed for a long time, remnant image is likely to occur.
- (6) Module has high frequency circuits. Sufficient suppression to the electromagnetic interference shall be done by system manufacturers. Grounding and shielding methods may be important to minimized the interference.

## 9-3. ELECTROSTATIC DISCHARGE CONTROL

Since a module is composed of electronic circuits, it is not strong to electrostatic discharge. Make certain that treatment persons are connected to ground through wrist band etc. And don't touch interface pin directly.

# 9-4. PRECAUTIONS FOR STRONG LIGHT EXPOSURE

Strong light exposure causes degradation of polarizer and color filter.

# 9-5. STORAGE

When storing modules as spares for a long time, the following precautions are necessary.

- (1) Store them in a dark place. Do not expose the module to sunlight or fluorescent light. Keep the temperature between 5°C and 35°C at normal humidity.
- (2) The polarizer surface should not come in contact with any other object.It is recommended that they be stored in the container in which they were shipped.

# 9-6. HANDLING PRECAUTIONS FOR PROTECTION FILM

- (1) When the protection film is peeled off, static electricity is generated between the film and polarizer. This should be peeled off slowly and carefully by people who are electrically grounded and with well ion-blown equipment or in such a condition, etc.
- (2) The protection film is attached to the polarizer with a small amount of glue. If some stress is applied to rub the protection film against the polarizer during the time you peel off the film, the glue is apt to remain on the polarizer.

Please carefully peel off the protection film without rubbing it against the polarizer.

- (3) When the module with protection film attached is stored for a long time, sometimes there remains a very small amount of glue still on the polarizer after the protection film is peeled off.
- (4) You can remove the glue easily. When the glue remains on the polarizer surface or its vestige is recognized, please wipe them off with absorbent cotton waste or other soft material like chamois soaked with normal-hexane.
