**Product Specification**
**1. General Description**

The LB064V02-A1 is a Color Active Matrix Liquid Crystal Display with an integral Cold Cathode Fluorescent Lamp(CCFL) backlight system. The matrix employs a-Si Thin Film Transistor as the active element. It is a transmissive type display operating in the normally white mode. This TFT-LCD has 6.4 inches diagonally measured active display area with VGA resolution(480 vertical by 640 horizontal pixel array) Each pixel is divided into Red, Green and Blue sub-pixels or dots which are arranged in vertical stripes. Gray scale or the brightness of the sub-pixel color is determined with a 6-bit gray scale signal for each dot, thus, presenting a palette of more than 262,144 colors.

The LB064V02-A1 has been designed to apply the interface method that enables low power, high speed, low EMI. The LB064V02-A1 is intended to support applications where thin thickness, low power are critical factors and graphic display are important. In combination with the vertical arrangement of the sub-pixels, the LB064V02-A1 characteristics provide an excellent flat display for office automation products such as portable Computer and FA.

**General Features**

Active screen size	6.4 inches (163.2mm) diagonal
Outline Dimension	145.5(H) x 111.5(V) x 6.0(D) mm(Typ.)
Pixel Pitch	0.204 mm x 0.204mm
Pixel format	640 horiz. By 480 vert. Pixels RGB stripes arrangement
Color depth	6-bit, 262,144 colors
Luminance, white	250 cd/m <sup>2</sup> (Typ.)
Power Consumption	TBD
Weight	160g(Typ.)
Display operating mode	Transmissive mode, Normally white
Surface treatments	Hard coating(3H) Anti-glare treatment of the front polarizer, HAZE(13%)

Product Specification

**2. Absolute Maximum Ratings**

The following are maximum values which, if exceeded, may cause faulty operation or damage to the unit.

**Table 1. ABSOLUTE MAXIMUM RATINGS**

Parameter	symbol	Values		Units	Notes
		Min.	Max.		
Power Input Voltage	$V_{CC}$	-0.3	4.0	Vdc	At $25 \pm 5^\circ\text{C}$
Operating Temperature	$T_{OP}$	0	50	$^\circ\text{C}$	1
Storage Temperature	$T_{ST}$	-20	60	$^\circ\text{C}$	1
Operating Ambient Humidity	$H_{OP}$	10	90	%RH	1
Storage Humidity	$H_{ST}$	10	90	%RH	1

Note : 1. Temperature and relative humidity range are shown in the figure below.  
Wet bulb temperature should be  $39^\circ\text{C}$  Max, and no condensation of water.

**Product Specification**
**3. Electrical Specifications**
**3-1. Electrical Characteristics**

The LB064V02-A1 requires two power inputs. One is employed to power the LCD electronics and to drive the TFT array and liquid crystal. The second input which powers the CCFL, is typically generated by an inverter. The inverter is an external unit to the LCD.

**Table 2. ELECTRICAL CHARACTERISTICS**

Parameter	Symbol	Values			Units	Notes
		Min.	Typ.	Max.		
<b>MODULE :</b>						
Power Supply Input Voltage	$V_{CC}$	3.0	3.3	3.6	Vdc	
Power Supply Input Current	$I_{CC}$	-	TBD	-	mA	1
Power Consumption	$P_C$	-	TBD	-	Watts	1
<b>LAMP :</b>						
Operating Voltage	$V_{BL}$	-	365	-	$V_{RMS}$	2
Operating Current	$I_{BL}$	-	5.0	-	mA	
Established Starting Voltage	$V_S$					3
at 25 °C		-	-	550	$V_{RMS}$	
at 0 °C		-	-	650	$V_{RMS}$	
Operating Frequency	$f_{BL}$	45	60	80	kHz	4
Discharge Stabilization Time	$T_s$			3	Minutes	5
Power Consumption	$P_{BL}$	-	1.825	-	Watts	6
Life Time		20,000	-	-	Hrs	7

**Note : The design of the inverter must have specification for the lamp in LCD Assembly.**

The performance of the Lamp in LCM, for example life time or brightness, is extremely influenced by the characteristics of the DC-AC inverter. So all the parameters of an inverter should be carefully designed so as not to produce too much leakage current from high-voltage output of the inverter.

When you design or order the inverter, please make sure unwanted lighting caused by the mismatch of the lamp and the inverter(no lighting, flicker, etc) never occurs. When you confirm it, the LCD Assembly should be operated in the same condition as installed in you instrument.

1. The specified current and power consumption are under the  $V_{CC}=3.3V$ ,  $25^{\circ}C$ ,  $f_v=60Hz$  condition whereas mosaic pattern is displayed and  $f_v$  is the frame frequency.
2. The variance of the voltage is  $\pm 10\%$ .
3. The voltage above  $V_S$  should be applied to the lamps for more than 1 second for start-up. Otherwise, the lamps may not be turned on. The used lamp current is the lamp typical current.

## Product Specification

4. The output of the inverter must have symmetrical(negative and positive) voltage waveform and symmetrical current waveform.(Unsymmetrical ratio is less than 10%) Please do not use the inverter which has unsymmetrical voltage and unsymmetrical current and spike wave.  
Lamp frequency may produce interface with horizontal synchronous frequency and as a result this may cause beat on the display. Therefore lamp frequency shall be as away possible from the horizontal synchronous frequency and from its harmonics in order to prevent interference.
5. Let's define the brightness of the lamp after being lighted for 5 minutes as 100%.  
 $T_s$  is the time required for the brightness of the center of the lamp to be not less than 95%.
6. The lamp power consumption shown above does not include loss of external inverter.  
The used lamp current is the lamp typical current.
7. The life is determined as the time at which brightness of the lamp is 50% compared to that of initial value at the typical lamp current on condition of continuous operating at  $25 \pm 2^\circ\text{C}$ .
8. Do not attach a conducting tape to lamp connecting wire.  
If the lamp wire attach to a conducting tape, TFT-LCD Module has a low luminance and the inverter has abnormal action. Because leakage current is occurred between lamp wire and conducting tape.

**Product Specification**
**3-2. Interface Connections**

This LCD employs two interface connections, a 20 pin connector is used for the module electronics and the other connector is used for the integral backlight system.

The electronics interface connector is a model GT101-30S-HR11 manufactured by LG Cable.

The pin configuration for the connector is shown in the table below.

**Table 3. MODULE CONNECTOR PIN CONFIGURATION**

Pin	Symbol	Description	Notes
1	GND	Ground	1. Connector 1.1 LCD : GT101-30S-HR11 (LG Cable) 1.2 Mating : FI-X30M ( JAE) or equivalent  2.3 Connector pin arrangement   [ LCD Module Rear View ]
2	VCC	Power (3.3V)

29	B5	Blue Data 5[MSB]	
30	GND	Ground	

The backlight interface connector is a model BHSR-02VS-1, manufactured by JST. The mating connector part number is SM02B-BHSS-1 by JST or equivalent.

The pin configuration for the connector is shown in the table below.

**Table 4. BACKLIGHT CONNECTOR PIN CONFIGURATION**

Pin	Symbol	Description	Notes
1	HV	Power supply for lamp(High voltage side)	1
2	LV	Power supply for lamp(Low voltage side)	1

Notes : 1. The high voltage side terminal is colored pink. The low voltage side terminal is black.

**Product Specification**
**3-3. Signal Timing Specifications**

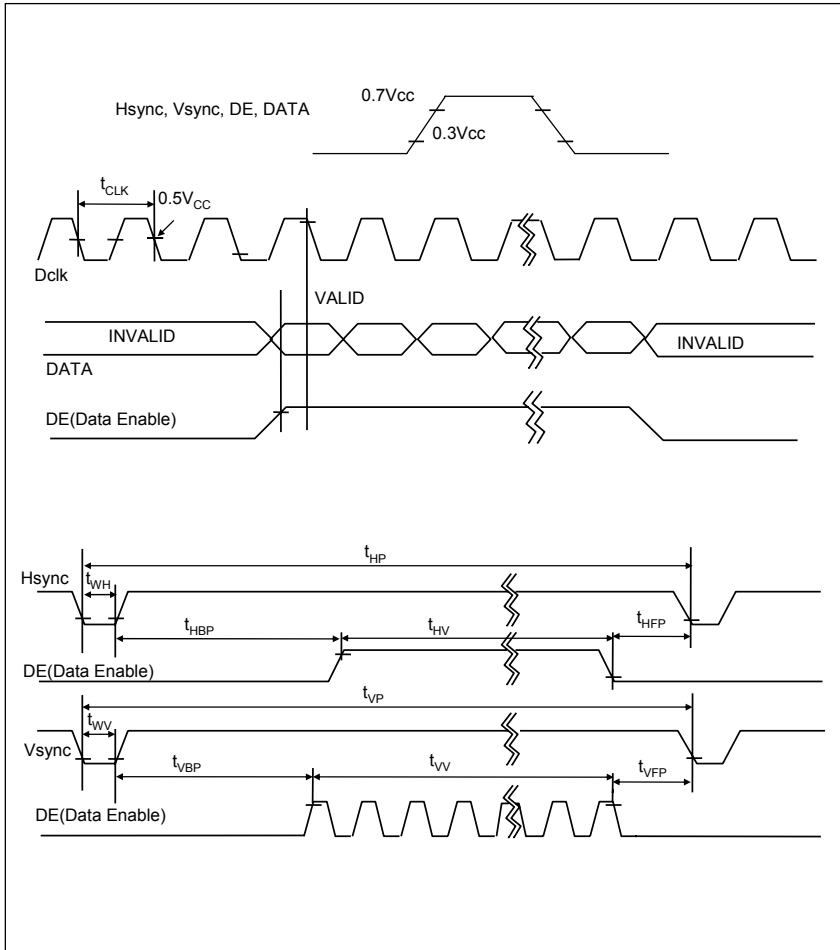

This is the signal timing required at the input of the User connector. All of the interface signal timing should be satisfied with the following specifications for it's proper operation.

	ITEM	SYMBOL	MIN	TYP.	MAX.	UNIT	NOTES
Dclk	Period	$t_{CLK}$	35	39.7	46	ns	
	Frequency	fclk	22	25	28	MHz	
Hsync	Period	$t_{HP}$	696	800	880	$t_{CLK}$	
	Width	$t_{WH}$	24	96	144		
Vsync	Period	$t_{VP}$	486	525	-	$t_{HP}$	
	Frequency	$f_V$	55	60	65	Hz	
	Width	$t_{WV}$	2	2	-	$t_{HP}$	
DE (Data Enable)	Horizontal Valid	$t_{HV}$	640	640	640	$t_{CLK}$	
	Horizontal Back Porch	$t_{HBP}$	16	40	-		
	Horizontal Front Porch	$t_{HFP}$	16	24	-		
	Horizontal Blank	-	56	160	$t_{HP} - t_{HV}$		$t_{WH} + t_{HBP} + t_{HFP}$
	Vertical Valid	$t_{VV}$	480	480	480	$t_{HP}$	
	Vertical Back Porch	$t_{VBP}$	2	33	-		
	Vertical Front Porch	$t_{VFP}$	2	10	-		
	Vertical Blank	-	6	45	$t_{VP} - t_{VV}$		$t_{WV} + t_{VBP} + t_{VFP}$

1. Hsync Period and Hsync Width-Active should be even number times of  $t_{CLK}$ .  
If the value is odd number times of  $t_{CLK}$ , display control signal can be asynchronous

Product Specification

**3-4. Signal Timing Waveforms**

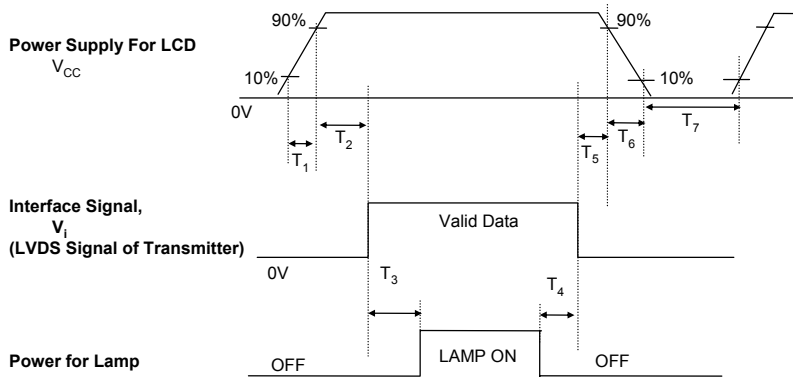

**Product Specification**
**3-5. Color Input Data Reference**

The brightness of each primary color(red,green and blue) is based on the 6-bit gray scale data input for the color ; the higher the binary input, the brighter the color. The table below provides a reference for color versus data input.

**Table 7. COLOR DATA REFERENCE**

Color		Input Color Data																	
		Red						Green						Blue					
		MSB			LSB			MSB			LSB			MSB			LSB

**Product Specification**
**3-6. Power Sequence**

Parameter	Values			Units
	Min.	Typ.	Max.	
$T_1$	-	-	10	ms
$T_2$	0	-	50	ms
$T_3$	200	-	-	ms
$T_4$	200	-	-	ms
$T_5$	0	-	50	ms
$T_6$	-	-	10	ms
$T_7$	400	-	-	ms

- Notes :
1. Please avoid floating state of interface signal at invalid period.
  2. When the interface signal is invalid, be sure to pull down the power supply for LCD  $V_{CC}$  to 0V.
  3. Lamp power must be turn on after power supply for LCD and interface signal are valid.

**Product Specification**
**4. Optical Specification**

Optical characteristics are determined after the unit has been 'ON' and stable for approximately 30 minutes in a dark environment at 25 °C. The values specified are at an approximate distance 50cm from the LCD surface at a viewing angle of  $\Phi$  and  $\theta$  equal to 0 °.

FIG. 1 presents additional information concerning the measurement equipment and method.

**FIG. 1 Optical Characteristic Measurement Equipment and Method**

( $T_a=25\text{ }^\circ\text{C}$ ,  $V_{CC}=3.3\text{V}$ ,  $f_v=60\text{Hz}$   
 $D_{clk}=25\text{MHz}$ ,  $I_{BL}=5\text{mA}$ )

**Table 8. OPTICAL CHARACTERISTICS**

Product Specification

Notes : 1. Contrast Ratio(CR) is defined mathematically as :

$$\text{Contrast Ratio} = \frac{\text{Surface Luminance with all white pixels}}{\text{Surface Luminance with all black pixels}}$$

2. Surface luminance is the center point across the LCD surface 50cm from the surface with all pixels displaying white. For more information see FIG 2.

When  $I_{BL}=5\text{mA}$ ,  $L_{WH}=210\text{cd/m}^2(\text{Min.})$   $250\text{cd/m}^2(\text{Typ.})$

3. The variation in surface luminance ,  $\delta$  WHITE is determined by measuring  $L_{ON}$  at each test position 1 through 5, and then dividing the maximum  $L_{ON}$  of 5 points luminance by minimum  $L_{ON}$  of 5 points luminance. For more information see FIG 2.

$$\delta \text{ WHITE} = \text{Maximum}(L_{ON1}, L_{ON2}, \dots, L_{ON5}) \div \text{Minimum}(L_{ON1}, L_{ON2}, \dots, L_{ON5})$$

4. Response time is the time required for the display to transition from to black(Rise Time,  $Tr_R$ ) and from black to white(Decay Time,  $Tr_D$ ). For additional information see FIG 3.

5. Viewing angle is the angle at which the contrast ratio is greater than 5. The angles are determined for the horizontal or x axis and the vertical or y axis with respect to the z axis which is normal to the LCD surface. For more information see FIG 4.

**5. Mechanical Characteristics**

The contents provide general mechanical characteristics for the model LP104S5-B2AP. In addition the figures in the next page are detailed mechanical drawing of the LCD.

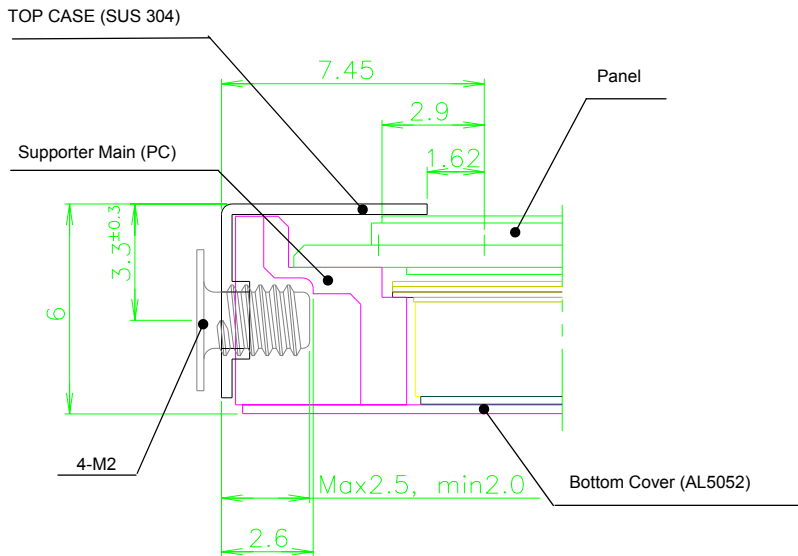

Outside dimensions	Horizontal	145.5 ± 0.5mm
	Vertical	111.5 ± 0.5mm
	Depth	6.0 ± 0.3mm
Bezel area	Horizontal	133.8 ± 0.5mm
	Vertical	101.1 ± 0.5mm
Active display area	Horizontal	130.56mm
	Vertical	97.92mm
Weight(approximate)	160g(Typ.), 170g(Max.)	
Surface Treatment	Hard coating(3H) Anti-glare treatment of the front polarizer Haze(13%)	

Product Specification

<DETAIL DESCRIPTION OF SIDE MOUNTING SCREW>

\*MOUNTING SCREW DEPTH : MAX 2.5mm  
 \*SCREW(4EA) TORQUE : Max 2.0kgf.cm

**Notes : 1. Screw plated through the method of non-electrolytic nickel plating is preferred to reduce possibility that results in vertical and/or horizontal line defect due to the conductive particles from screw surface.**

Product Specification

**6. Reliability**

Environment test condition

No.	Test Item	Conditions
1	High temperature storage test	Ta= 60°C 240h
2	Low temperature storage test	Ta= -20°C 240h
3	High temperature operation test	Ta= 50°C 50%RH 240h
4	Low temperature operation test	Ta= 0°C 240h
5	Vibration test (non-operating)	Sine wave, 10 ~ 500 ~ 10Hz, 1.5G, 0.37oct/min 3 axis, 1hour/axis
6	Shock test (non-operating)	Half sine wave, 180G, 2ms one shock of each six faces(I.e. run 180G 2ms for all six faces)
7	Altitude operating storage / shipment	0 - 10,000 feet(3048m) 0 - 40,000 feet(12,192m)

{ Result Evaluation Criteria }

There should be no change which might affect the practical display function when the display quality test is conducted under normal operating condition.

## Product Specification

**9. PRECAUTIONS**

Please pay attention to the following when you use this TFT LCD module.

**9-1. MOUNTING PRECAUTIONS**

- (1) You must mount a module using holes arranged in four corners or four sides.
- (2) You should consider the mounting structure so that uneven force(ex. Twisted stress) is not applied to the module.  
And the case on which a module is mounted should have sufficient strength so that external force is not transmitted directly to the module.
- (3) Please attach a transparent protective plate to the surface in order to protect the polarizer.  
Transparent protective plate should have sufficient strength in order to resist external force.
- (4) You should adopt radiation structure to satisfy the temperature specification.
- (5) Acetic acid type and chlorine type materials for the cover case are not describe because the former generates corrosive gas of attacking the polarizer at high temperature and the latter causes circuit break by electro-chemical reaction.
- (6) Do not touch, push or rub the exposed polarizers with glass, tweezers or anything harder than HB pencil lead. And please do not rub with dust clothes with chemical treatment.  
Do not touch the surface of polarizer for bare hand or greasy cloth.(Some cosmetics are determined to the polarizer.)
- (7) When the surface becomes dusty, please wipe gently with absorbent cotton or other soft materials like chamois soaks with petroleum benzene. Normal-hexane is recommended for cleaning the adhesives used to attach front / rear polarizers. Do not use acetone, toluene and alcohol because they cause chemical damage to the polarizer.
- (8) Wipe off saliva or water drops as soon as possible. Their long time contact with polarizer causes deformations and color fading.
- (9) Do not open the case because inside circuits do not have sufficient strength.
- (10) If there are some problems by using system bracket, system bracket should be first modified and then LCD module reconfirmed under mutual approval .

**9-2. OPERATING PRECAUTIONS**

- (1) The spike noise causes the mis-operation of circuits. It should be lower than following voltage :  
 $V = \pm 200\text{mV}$ (Over and under shoot voltage)
- (2) Response time depends on the temperature.(In lower temperature, it becomes longer.)
- (3) Brightness depends on the temperature. (In lower temperature, it becomes lower.)  
And in lower temperature, response time(required time that brightness is stable after turned on) becomes longer.
- (4) Be careful for condensation at sudden temperature change. Condensation makes damage to polarizer or electrical contacted parts. And after fading condensation, smear or spot will occur.
- (5) When fixed patterns are displayed for a long time, remnant image is likely to occur.
- (6) Module has high frequency circuits. Sufficient suppression to the electromagnetic interference shall be done by system manufacturers. Grounding and shielding methods may be important to minimized the interference.

## Product Specification

**9-3. ELECTROSTATIC DISCHARGE CONTROL**

Since a module is composed of electronic circuits, it is not strong to electrostatic discharge. Make certain that treatment persons are connected to ground through wrist band etc. And don't touch interface pin directly.

**9-4. PRECAUTIONS FOR STRONG LIGHT EXPOSURE**

Strong light exposure causes degradation of polarizer and color filter.

**9-5. STORAGE**

When storing modules as spares for a long time, the following precautions are necessary.

- (1) Store them in a dark place. Do not expose the module to sunlight or fluorescent light. Keep the temperature between 5°C and 35°C at normal humidity.
- (2) The polarizer surface should not come in contact with any other object.  
It is recommended that they be stored in the container in which they were shipped.

**9-6. HANDLING PRECAUTIONS FOR PROTECTION FILM**

- (1) When the protection film is peeled off, static electricity is generated between the film and polarizer.  
This should be peeled off slowly and carefully by people who are electrically grounded and with well ion-blown equipment or in such a condition, etc.
- (2) The protection film is attached to the polarizer with a small amount of glue. If some stress is applied to rub the protection film against the polarizer during the time you peel off the film, the glue is apt to remain on the polarizer.  
Please carefully peel off the protection film without rubbing it against the polarizer.
- (3) When the module with protection film attached is stored for a long time, sometimes there remains a very small amount of glue still on the polarizer after the protection film is peeled off.
- (4) You can remove the glue easily. When the glue remains on the polarizer surface or its vestige is recognized, please wipe them off with absorbent cotton waste or other soft material like chamois soaked with normal-hexane.
