

TFT COLOR LCD MODULE NL6448CC33-30

26 cm (10.4 inches), 640 480 pixels, 262,144 colors, Backlight-less Wide temperature range

DESCRIPTION

NL6448CC33-30 is a TFT(Thin Film Transistor) active matrix color liquid crystal display (LCD) comprising amorphous silicon TFT attached to each signal electrode and a driving circuit.

The 26 cm (10.4 inches) diagonal display area contains 640 480 pixels and can display 262,144 colors simultaneously.

NL6448CC33-30 is a backlight-less model. Therefore, it is easy for customers to make own backlight and to get necessary brightness.

FEATURES

- · Backlight-less
- · High contrast, wide viewing angle and wide color gamut
- Smooth polarizer surface
- 6-bit digital RGB interface
- · Data enable (DE) function
- Variable gamma control
- · Reverse scan capability
- · Wide temperature range

APPLICATIONS

- Display terminals for control system
- Monitors for process controller
- Industrial PC

The information in this document is subject to change without notice.

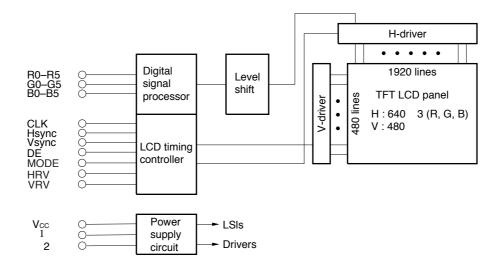

STRUCTURE AND FUNCTIONS

A color TFT (thin film transistor) LCD module is comprised of a TFT liquid crystal panel structure, LSIs for driving the TFT array, and a backlight assembly. The TFT panel structure is created by sandwiching liquid crystal material in the narrow gap between a TFT array glass substrate and a color filter glass substrate.

RGB (red, green, blue) data signals from a source system is modulated into a form suitable for active matrix addressing by the onboard signal processor and sent to the driver LSIs which in turn addresses the individual TFT cells.

Acting as an electro-optical switch, each TFT cell regulates light transmission from a backlight assembly when activated by the data source. By regulating the amount of light passing through the array of red, green, and blue dots, color images are created with clarity.

BLOCK DIAGRAM

OUTLINE OF CHARACTERISTICS (at room temperature)

| Display area | 211.2 (H) 158.4 (V) mm |
|-------------------|---|
| Drive system | a-Si TFT active matrix |
| Display colors | 262,144 colors |
| Number of pixels | 640 480 pixels |
| Pixel arrangement | RGB vertical stripe |
| Pixel pitch | 0.33 (H) 0.33 (V) mm |
| Module size | 264.0 (H) 187.8 (V) 8.8 TYP. (D) mm |
| Weight | 300 g (TYP.) |
| Contrast ratio | 150 : 1 (TYP.) |
| Color gamut | 43% (TYP., center, to NTSC) |
| Response time | 15 ms (TYP.), white to black |
| Transmittance | 6.3% (TYP.) Note |
| Signal system | 6-bit digital signals for each of RGB primary colors, synchronous signals |
| | (Hsync, Vsync), dot clock (CLK) |
| Supply voltages | 3.3 V [5.0 V] |
| Backlight | Backlight-less |
| Power consumption | 1.0 W (TYP. at 3.3V) |
| | |

ABSOLUTE MAXIMUM RATINGS

| Parameter | Symbol | Rating | Unit | Remarks |
|-----------------------------|--------|--|-------------------|---|
| Supply voltage | Vcc | -0.3 to 6.5 | V | Ta=25℃ |
| Input voltage | Vı | -0.3 to 6.5 | V | $V_{I} - V_{CC} < 3.0$ |
| Storage temp. | Тѕт | –30 to 85 | °C | Note 4 |
| Operating temp. | TOP1 | -25 to 85 | °C | Non-destructive Note 4 |
| Operating temp. | Top2 | -10 to 70 | °C | Screen image should be recognized. Note 2 |
| | RH | 95% relative humidity | - | Ta 40°C |
| Humidity | | 85% relative humidity | - | 40 < Ta 50°C |
| | | (Ta = 50°C, 85% relative humidity) Absolute humidity. | - | Ta> 50℃ |
| Incident light intensity | П | < 20,000 | cd/m ² | at CF side, Ta= 25°C Notes 1, 4 |
| Environment light intensity | _ | < 20,000 | lx | at TFT side, Ta= 25°C Notes 1, 5, 6 |
| Gamma resistor | R | 3 k Max | | Should not be used by "Open" |

Notes 1. Measured at the center of display area (Front side)

- 2. Guarantee the optical characteristics at 25 degree C only.
- 3. No condensation
- In case of that the module is exposed at high temperature in operation or storage, the polarizer film may peel off from the panel in the edge of the display area.It is recommended not to use the module under such environment continuously. It is estimated that
- the polarizer may peel off after the operation at 85 degree C with 120 hours in accumulation.
- 5. Incident light (Backlight) should be located from CF(Color Filter) side only.
- 6. Avoid to use the module in the environment which the strong light exposes the module surface directly.

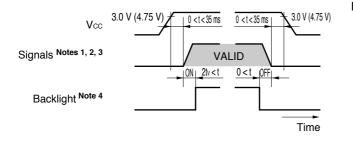

ELECTRICAL CHARACTERISTICS

(1) Logic, LCD driving

| | | | | | | Ta = 25°C |
|--------------------------|--------|---------------|--------------------------|---------------|------|------------------------------|
| Parameter | Symbol | MIN. | TYP. | MAX. | Unit | Remarks |
| Supply voltage | Vcc | 3.0 (4.75) | 3.3 (5.0) | 3.6 (5.25) | V | Vcc = 3.3 V (Vcc = 5.0 V) |
| Logic input Low voltage | VIL | 0 | _ | Vcc 0.3 | V | |
| Logic input High voltage | VIH | Vcc 0.7 | - | Vcc | V | |
| Supply current | lcc | | 325 Note (250) | 400 (300) | mA | Vcc = 3.3 V (Vcc = 5.0 V) |

Note Checkered flag pattern (in EIAJ ED-2522)

SUPPLY VOLTAGE SEQUENCE

- Notes 1. Signals: CLK, Hsync, Vsync, DE, DATA (R0-R5, G0-G5, B0-B5)
 - 2. The supply voltage for input signals should be the same as Vcc.
 - 3. Apply VDDB within the LCD operation period. When the backlight turns on before LCD operation or the LCD operation turns off before the backlight turns off, the display may momentarily become white.
 - **4.** When the power is off, please keep whole signals low level or high impedance.

INTERFACE AND PIN CONNECTION

- (1) Interface signals, power supply

| | Blue | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 1 | 1 | 1 | 1 | 1 | 1 |

Remark Colors are developed in combination with 6-bit signals (64 steps in grayscale) of each primary red, green, and blue color.

This process can result in up to 262,144 ($64 \times 64 \times 64$) colors.

INPUT SIGNAL TIMING

| Transmittan | ce | Т | at display center, with white | 5.5 | 6.3 | - | % |
| Gamma cor | Gamma correction | | 1- 2:0 | - | 0.4 | _ | _ |
| | | | 1- 2:2k | - | 4.3 | - | |

Remarks 1. The contrast ratio is calculated by using the following formula.

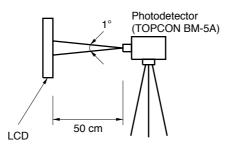

Contrast ratio (CR) = $\frac{\text{Luminance with all pixels in white}}{\text{Luminance with all pixels in black}}$

The Luminance is measured in darkroom.

2. Definitions of viewing angle are as follows.

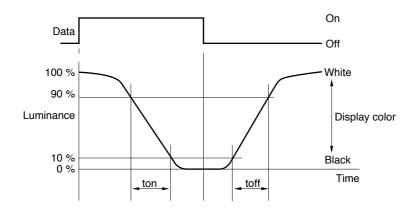

3. The luminance is measured after 20 minutes from the module works, with all pixels in white. Typical value is measured after luminance saturation.

4. Definition of response time is as follows.

The output of photodetector is measured when the brightness changes from "white" to "black" and "black" to "white". The response time is defined as 90 to 10 % for turn-on and 10 to 90 % for turn-off.

Reference data at $Ta = 0^{\circ}C$ ton = 70ms typical toff = 160ms typical

5. For the measurements of color gamut, chromaticity and transmittance, the following backlight lamp is used.

| Color temperature | : 6000 K |
|-------------------|------------------------|
| Luminance : | 1500 cd/m ² |
| Chromaticity: | x=0.320, y=0.325 |

6. Measuring viewing angle is perpendicular to the center of screen.

 $X = \pm 0^{\circ}$, $Y = \pm 0^{\circ}$, at center

|---|---|
| High temperature/humidity operation Note 1 | 65 ± 2°C, 85% relative humidity 240 hours Display data is black. |
| Heat cycle (operation) Note 1 | <1> $-25^{\circ}C \pm 3^{\circ}C \cdots 1$ hour 85^{\circ}C $\pm 3^{\circ}C \cdots 1$ hour <2> 50 cycles, 5 hours/cycle <3> Display data is black. |
| Thermal shock (non-operation) Note 1 | <1> -30°C ± 3°C ··· 30 minutes 85°C ± 3°C ··· 30 minutes <2> 16 cycles <3> Temperature transition time within 5 minutes |
| Vibration (non-operation) Notes 1, 2 | <1> 5 - 100 Hz, 2G 1 minute/cycle X, Y, Z direction <2> 120 times each direction |
| Mechanical shock (non-operation) Notes 1, 2 | <1> 55 G, 11 ms X, Y, Z direction <2> 5 times each direction |
| ESD (operation) Notes 1, 3 | 150 pF, 150 , ±10 kV 9 places on a panel 10 times each place at one-second intervals |

Notes 1. Display function is checked by the same condition as LCD module out-going inspection.

- 2. Physical damage.
- **3.** Discharge points "•" are shown in the figure.

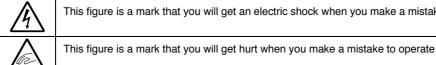

GENERAL CAUTIONS

Next figures and sentence are very important. Please understand these contents as follows.

| | This figure is a mark that you will get hurt and/or the module will have damages when you make a mistake to operate. |
|--|--|
|--|--|

This figure is a mark that you will get an electric shock when you make a mistake to operate.

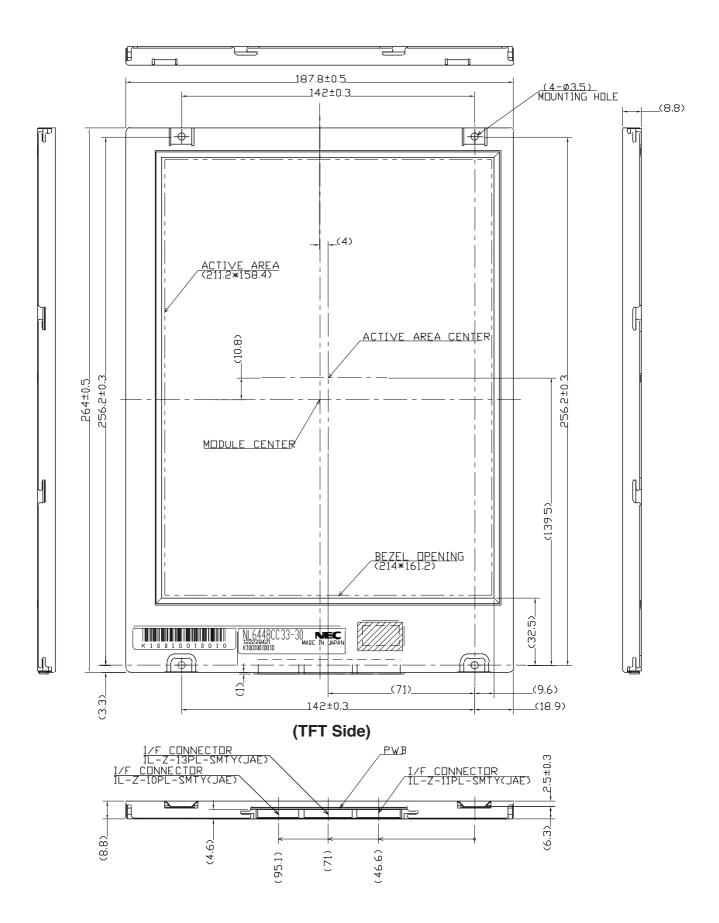

CAUTION

- (1) Caution when taking out the module
 - a) Pick the pouch only, in taking out module from a carrier box.
- (2) Cautions for handling the module
 - a) As the electrostatic discharges may break the LCD module, handle the LCD module with care against electrostatic discharges.
 - As the LCD panel is made from fragile glass material, impulse and pressure to the LCD b) module should be avoided.
 - c) As the surface of polarizer is very soft and easily scratched, use a soft dry cloth without chemicals for cleaning.
 - d) Do not pull the interface connectors in or out while the LCD module is operating.
 - e) Put the module display side down on a horizontal plane.
 - Handle connectors and cables with care. f)
 - g) When the module is operating, do not lose CLK, Hsync or Vsync signal. If any one of these signals is lost, the LCD panel would be damaged.
 - h) The torque to mounting screw should never exceed 0.294 N·m (3 kgf·cm).
- (3) Cautions for the atmosphere
 - a) Dew drop atmosphere should be avoided.
 - b) Do not store and/or operate the LCD module in a high temperature and/or high humidity atmosphere. Storage in an electro-conductive polymer packing pouch and under relatively low temperature atmosphere is recommended.
 - c) Do not operate the LCD module in a high magnetic field.
- (4) Caution for the module characteristics
 - a) Do not apply fixed pattern data signal for a long time to the LCD module. It may cause image sticking. Please use screen savers if the display pattern is fixed more than one hour.
- (5) Other cautions
 - a) Do not disassemble and/or reassemble LCD module.
 - b) Do not readjust variable resistors etc.
 - c) When returning the module for repair or etc, please pack the module not to be broken. We recommend to the original shipping packages.

Liquid Crystal Display has the following specific characteristics. There are not defects or malfunctions.

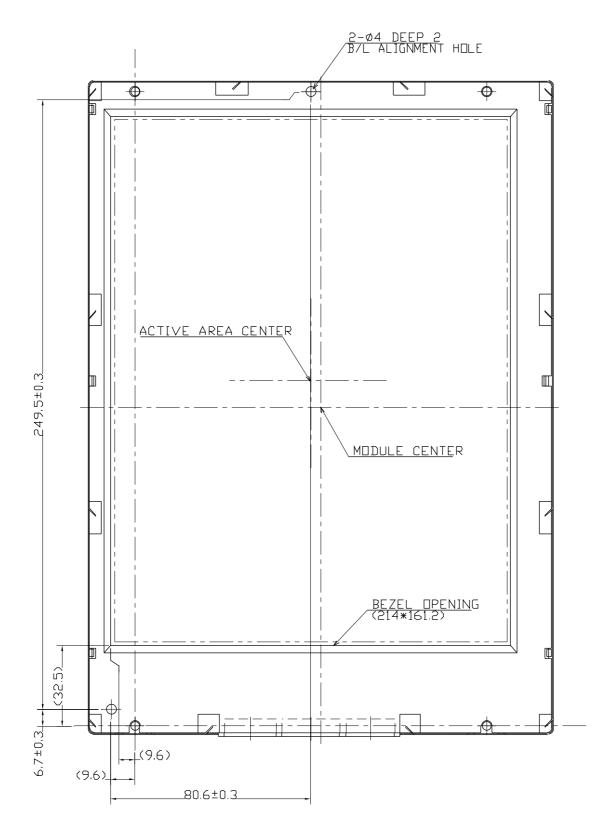

- The display condition of LCD module may be affected by the ambient temperature.
- Uneven brightness and/or small spots may be noticed depending on different display patterns.

No part of this document may be copied or reproduced in any form or by any means without the prior written consent of NEC Corporation. NEC Corporation assumes no responsibility for any errors which may appear in this document.

NEC Corporation does not assume any liability for infringement of patents. Copyrights or other intellectual property rights of third parties by or arising from use of a device described herein or any other liability arising from use of such device. No license, either express, implied or otherwise, is granted under any patents, copyrights or other intellectual property rights of NEC Corporation or others.

While NEC Corporation has been making continuous effort to enhance the reliability of its Electronic Components, the possibility of defects cannot be eliminated entirely. To minimize risks of damage or injury to persons or property arising from a defect in an NEC Electronic Components, customers must incorporate sufficient safety measures in its design, such as redundancy, fire-containment, and anti-failure features.

NEC devices are classified into the following three quality grades:

"Standard", "Special", and "Specific". The Specific quality grade applies only to devices developed based on a customer designated "quality assurance program" for a specific application. The recommended applications of a device depend on its quality grade, as indicated below. Customers must check the quality grade of each device before using it in a particular application.

Standard: Computers, office equipment, communications equipment, test and measurement equipment, audio and visual equipment, home electronic appliances, machine tools, personal electronic equipment and industrial robots

Special: Transportation equipment (automobiles, trains, ships, etc.), traffic control systems, anti-disaster systems, anti-crime systems, safety equipment and medical equipment (not specifically designed for life support) Specific: Aircrafts, aerospace equipment, submersible repeaters, nuclear reactor control systems, life support systems or medical equipment for life support, etc.

The quality grade of NEC devices is "Standard" unless otherwise specified in NEC?s Data Sheets or Data Books. If customers intend to use NEC devices for applications other than those specified for Standard quality grade, they should contact an NEC sales representative in advance.

Anti-radioactive design is not implemented in this product.
