1. Application

This Specification is applicable to 8.28 cm (3.3 inch) TFT-LCD monitor for non-military use.

- ORTUS TECHNOLOGY makes no warranty or assume no liability that use of this Product and/or any information including drawings in this Specification by Purchaser is not infringing any patent or other intellectual property rights owned by third parties, and ORTUS TECHNOLOGY shall not grant to Purchaser any right to use any patent or other intellectual property rights owned by third parties. Since this Specification contains ORTUS TECHNOLOGY's confidential information and copy right, Purchaser shall use them with high degree of care to prevent any unauthorized use, disclosure, duplication, publication or dissemination of ORTUS TECHNOLOGY'S confidential information and copy right.
- If Purchaser intends to use this Products for an application which requires higher level of reliability and/or safety in functionality and/or accuracy such as transport equipment (aircraft, train, automobile, etc.), disaster-prevention/security equipment or various safety equipment, Purchaser shall consult ORTUS TECHNOLOGY on such use in advance.
- O This Product shall not be used for application which requires extremely higher level of reliability and/or safety such as aerospace equipment, telecommunication equipment for trunk lines, control equipment for nuclear facilities or life-support medical equipment.
- ORTUS TECHNOLOGY assumes no liability for any damage resulting from misuse, abuse, and/or miss-operation of the Product deviating from the operating conditions and precautions described in the Specification.
- ◎ If any issue arises as to information provided in this Specification or any other information, ORTUS TECHNOLOGY and Purchaser shall discuss them in good faith and seek solution.
- ◎ ORTUS TECHNOLOGY assumes no liability for defects such as electrostatic discharge failure occurred during peeling off the protective film or Purchaser's assembly process.

◎ This Product is compatible for RoHS directive.

Object substance	Maximum content [ppm]
Cadmium and its compound	100
Hexavalent Chromium Compound	1000
Lead & Lead compound	1000
Mercury & Mercury compound	1000
Polybrominated biphenyl series (PBB series)	1000
Polybrominated biphenyl ether series (PBDE series)	1000

2. Outline Specifications

2.1 Features of the Product

- 3.3 inch diagonal display, 120 x RGB [H] x 320 [V] dots.
- 262,144 / 65,536 colors.
- Single power supply operation of 3.3V.
- Timing generator [TG], Counter-electrode driving circuitry, Built-in power supply circuit.
- Power save (Standby) mode capable.
- Long life & High bright white LED back-light and Touch panel operation monitor.

2.2 Display Method

Items	Specifications	Remarks
Display type	TN type 262,144 or 65,536 colors.	
	Transmissive type, Normally white	
Driving method	a-Si TFT Active matrix.	
	Line-scanning, Non-interlace.	
Dot arrangement	RGB stripe arrangement.	Refer to "Dot arrangement"
Signal input method	Data : 18-bit / 16-bit RGB interface.	
	Command : SPI interface.	
Backlight type	Long life & High bright white LED.	
Touch panel	Resistance type, transmissive analog tablet	Surface finishing : AG
Viewing direction	3:00 (Right)	

Dot arrangement (FPC cable placed right side)

3. Dimensions and Outward Form

3.1 Dimensions

Items	Specifications	Unit	Remarks
Outline dimensions	38.5[H] × 90.0[V] × 6.30[D]	mm	Exclude FPC cable and
			parts on FPC.
Active area	29.07[H] × 77.52[V]	mm	8.28cm diagonal
Number of dots	360[H] × 320[V]	dot	
Dot pitch	80.75[H] × 242.25[V]	um	
Hardness of	3	Н	Load:4.9N,Angle:45°
Touch Panel surface			Reference judgment standard:JIS-K5600
Weight	37.0	g	Include FPC cable

3.3 Serial № print (S-print)

1) Display Items

S-print indicates the least significant digit of manufacture year (1digit),

manufacture month with below alphabet (1letter), model code (4characters), serial number (6digits).

	Contents of display								
а	The least significant	The least significant digit of manufacture year							
b	Manufacture month	Jan-A		May-E	S	ep-l			
		Feb-B		Jun-F	0)ct-J			
		Mar-C		Jul-G	N	lov-K			
		Apr-D		Aug-H	D	ec-L			
с	Model code	33PC	(Made in Japa	n)					
		33QC (Made in Malaysia)							
	33RC (Made in China)								
d	Serial number								

* Example of indication of Serial № print (S-print)

•Made in Japan

2J33PC000125

means "manufactured in October 2012, 3.3" P type, C specifications, serial number 000125"

•Made in Malaysia

2J33QC000125

means "manufactured in October 2012, 3.3" Q type, C specifications, serial number 000125"

Made in China

2J33RC000125

means "manufactured in October 2012, 3.3" R type, C specifications, serial number 000125"

2) Location of Serial № print (S-print) Refer to 3.2 "Outward Form".

3)Others

Please note that it is likely to disappear with an organic solvent about the Serial print.

4. Pin Assignment

LCD mo	dule block	
No.	Symbol	Function
1	BLL	LED drive power source. (Cathode side)
2	BLH	LED drive power source. (Anode side)
3	TEST1	Open
4	VCC	Power supply input.
5	VCC	Power supply input.
6	VSYNC	Vertical sync signal input. (Negative polarity at VSPL=0)
7	HSYNC	Horizontal sync signal input. (Negative polarity at HSPL=0)
8	PCLK	Clock input for display. (Data Input on the rising edge at DPL=0)
9	DE	Input data effective signal. (Lo: active at EPL=0.)
10	GND	Ground
11	RESB	System reset signal input. (Lo: active)
12	GND	Ground
13	RDB	Connect to VCC.
14	RS	Connect to VCC.
15	GND	Ground
16	GND	Ground
17	DB17	Display data input for (R).
18	DB16	00h for black display
19	DB15	DB12:LSB DB17:MSB
20	DB14	
21	DB13	
22	DB12	
23	DB11	Display data input for (G).
24	DB10	00h for black display
25	DB9	DB6:LSB DB11:MSB
26	DB8	
27	DB7	
28	DB6	
29	DB5	Display data input for (B).
30	DB4	00h for black display
31	DB3	DB0:LSB DB5:MSB
32	DB2	
33	DB1	
34	DB0	
35	SDI	Data input for serial communication.
36	SDO	Data output for serial communication. (If not use, leave it open.)
37	CSB	Chip select input for serial communication. (Lo: active)
38	SCL	Clock input for serial communication. (Data Input on the rising edge.)
39	GND	Ground

Touch panel block

No.	Symbol	Function					
1	YD	Y-axis downside terminal					
2	XL	X-axis left terminal					
3	YU	Y-axis upside terminal					
4	XR	X-axis right terminal					

 Recommended connector: HIROSE ELECTRIC [FH23-39S-0.3SHW(05)] (LCE FCI [59453-041110EDHLF] (Tou

(LCD module block) (Touch panel block)

- Please make sure to check a consistency between pin assignment in "3.2 Outward Form" and your connector pin assignment when designing your circuit.

Inconsistency in input signal assignment may cause a malfunction.

5. Absolute Maximum Rating

						GND=0V
Item	Symbol	Condition	Rating		Unit	Applicable terminal
			MIN	MAX		
Supply voltage	VCC		-0.3	4.6	V	VCC
Input voltage for logic	VI		-0.3	VCC+0.3	V	VSYNC,HSYNC,PCLK,DE,
						DB[17:0],CSB,SCL,SDI,RESB
Touch Panel input voltage	VIT			7.0	V	XR,XL,YU,YD
Forward current	IL		_	60.0	mA	BLH - BLL
-						
Storage temperature	Tstg		-30	80	°C	
range						
Storage humidity range	Hstg	Non condensing in an environmental				
		moisture at or	less than 40 °C	90%RH.		

6. Recommended Operating Conditions

•	0						GND=0V
Item	Symbol	Condition		Rating		Unit	Applicable terminal
			MIN	TYP	MAX		
Supply voltage	VCC		3.0	3.3	3.6	V	VCC
Input voltage for logic	VI		0		VCC	V	VSYNC,HSYNC,PCLK,
							DE,DB[17:0],CSB,
							SCL,SDI,RESB
Operational temperature	Тор	Note	-20	+25	+70	°C	Touch Panel surface
range							temperature
Operating humidity range	Нор	Ta<=40 °C	20		85	%	
		Ta>40 °C	Non condensing in				
			an environmental moisture at or				
			less than 4	0 °C 85%R⊦	ł.		

Note: This monitor is operable in this temperature range. With regard to optical characteristics, refer to Item 12."CHARACTERISTICS".

ORTUS TECHNOLOGY CO., LTD.

7. Characteristics

7.1 DC Characteristics

7.1.1 Display Module

			rwise noted, Ta	a=25 °C,\	/CC=3.3V,GND=0V)		
Item	Symbol	Condition		Rating	Unit	Applicable terminal	
			MIN	TYP			
Input Signal	VIH	VCC=3.0-3.6V	CC=3.0-3.6V 0.8×VCC VCC		V	VSYNC,HSYNC,	
Voltage					PCLK,DE,		
	VIL		0		0.2×VCC	V	DB[17:0],CSB,
							SCL,SDI,RESB
Operating	ICC	Color bar display		7.5	15.0	mA	VCC
Current							
Standby	ICCS	Other input with 25 50					VCC
Current		constant voltage					

7.1.2 Backlight

Item	Symbol	Condition		Rating		Unit	Applicable terminal
			MIN	TYP	MAX		
Forward current	IL	Ta=25 °C		35.0	50.0	mA	BLH — BLL
Forward voltage	VL	Ta=25 °C, IL=35.0mA	7.5	8.6	9.9	V	
Estimated Life	LL	Ta=25 °C	—	(50,000)	_	hr	
of LED		IL=35.0mA					

Note: - The lifetime of the LED is defined as a period till the brightness of the LED decreases to the half of its initial value.

- This figure is given as a reference purpose only, and not as a guarantee.

- This figure is estimated for an LED operating alone. As the performance of an LED may differ when assembled as a monitor

together with a TFT panel due to different environmental temperature.

- Estimated lifetime could vary on a different temperature and usually higher temperature could reduce the life significantly.

7.1.3 Touch Panel

							Ta=25° C
Item	Symbol	Condition		Rating	Unit	Applicable terminal	
			MIN	TYP	MAX		
Linearity	LE	Note	-2.0		2.0	%	
Insulation	RI	DC 25V	20			MΩ	XR,XL-YU,YD
resistance							
Terminal		X	50		350	Ω	XR,XL
resistance		Y	500		1500		YU,YD
Rated voltage	voltage DC			5.0	7.0	V	XR,XL,YU,YD
on/off chattering		R0.8mm Polyacetal pen.			10	ms	XR,XL,YU,YD

Note: -Please refer to "3.2 Outward Form" for the range of the guarantee.

-Linearity Measurement:Refer to the APPENDIX of "Reference Method for Measuring Optical Characteristics". Load:2.45N

Mechanical Characteristics

Item		Rating		Unit	Remark			
	MIN	TYP	MAX					
Detectable activation force	0.1		1.0	N	R0.8mm Polyacetal pen or finger.			
					Resistance between X and Y axis must be			
					equal or lower than $2K\Omega$.			
Keystroke durability					key the same part by silicon rubber.			
1,000,000		000,000		times	(Touch panel Active area only)			
					-Rubber tip part: R8mm -Load:2.45N			
					-Speed:2times/second

7.3.2 RGB Interface

				Unless othe	rwise noted	, Ta=25 °	C,VCC=3.3V,GND=0V)
Item	Symbol	Condition		Rating	Unit	Applicable terminal	
			MIN	TYP	MAX		
PCLK Frequency	fCLK			5.0	6.6	MHz	PCLK
PCLK Low period	twPCKL	0.2×VCC or less	40			ns	
PCLK High period	twPCKH	0.8×VCC or more	40			ns	
Setup time	tsp		10	-		ns	PCLK,VSYNC, HSYNC,DE,
Hold time	thd		40			ns	DB[17:0]
	8		8				•

7.4 Input Timing Characteristics

Item	Symbol	Rating			Unit	Applicable terminal
		MIN	TYP	MAX		
PCLK Frequency	fPCLK		5.0	6.6	MHz	PCLK
VSYNC Frequency Not	e fVSYNC	54	60	66	Hz	VSYNC
VSYNC Cycle	tv	325	330	350	Н	VSYNC,HSYNC
VSYNC Pulse Width	tw4H	1	2		Н	
Vertical Back Porch	tvb	2	4	27	Н	VSYNC,HSYNC,DE
Vertical Front Porch	tvf	2	4	27	Н	DB[17:0]
Vertical Display Period	tvdp		320		Н	
HSYNC frequency	fHSYNC		19.8	23.1	kHz	HSYNC
HSYNC Cycle	th	122	252	290	CLK	PCLK,HSYNC
HSYNC Pulse Width	tw5H	3	3		CLK	
Horizontal Back Porch	thb	2	19	250	CLK	PCLK,HSYNC,DE
Horizontal Front Porch	thf	2	110	250	CLK	DB[17:0]
DE Pulse Width	tw6H		120		CLK	PCLK,DE
Horizontal Display Period	thdp		120		CLK	PCLK,DE,DB[17:0]

Note: This is recommended spec to get high quality picture on display. It is customer's risk to use out of this frequency.

9. Interface

9.1 RGB Interface

There are two transferring mode in RGB-I/F with the RIM[1:0] setting. The connection method to input display data is shown below, in RGB-I/F mode .

	~	18-bit RGB interface	1	6-bit RGB interface
	(F	R 0Ch RIM[1:0] = 00)	(R	0Ch RIM[1:0] = 01)
DB 17	 R 5	Display data (R) input : MSB	R 4	Display data (R) input : MSB
DB 16	 R 4	Display data (R) input	R 3	Display data (R) input
DB 15	 R 3	Display data (R) input	R 2	Display data (R) input
DB 14	 R 2	Display data (R) input	R 1	Display data (R) input

DB 1	 B 1	Display data (B) input	B 0	Display data (B) input : LSB
DB 0	 B 0	Display data (B) input : LSB	*	

* If not use, connect it to GND.

9.2 Serial Interface

Serial communication control block consists of the chip select pin (CSB), the serial transfer clock pin (SCL) and the serial data input pin (SDI). The serial communication begin the transfer on the falling edge of CSB and ends of data transfer on the rising edge of CSB. When the initial 6bit (Start byte) is 011100, the following 16bit data is received by LSI.

The seventh data (RS bit) indicates whether the following 16bit data is "Index register " or "Data (Instruction)".

When RS=0, the following 16bit data is "Index register".

When RS=1, the following 16bit data is "Data".

9.2.1 Data format of serial communication (SPI)

	(19/49)
0.2.2 Degister transmission	Issue. Jul. 9, 2012
9.2.2 Register transmission	
The configuration of register transmission is shown below. EX: R10h = $0x1390h$	
CSB

10.2 GRAM Address

The LSI has 240 x 320 x 18bit GRAM, and this panel uses $120 \times 320 \times 18bit$ of them as follows. Display data is written to specified window area.

So, set address as follows when you rewrite all viewing image.

Window address	R50h	HSA[7:0] = 8'h3C
	R51h	HEA[7:0] = 8'hB3
	R52h	VSA[8:0] = 9'h000
	R53h	VEA[8:0] = 9'h13F

In the case that writing direction is normal, R03h = 16'h1030h (ID[1:0] = 11, AM = 0), set the start address is as follows.

R20h	AD[7:0] = 8'h3C
R21h	AD[16:8] = 9'h000

Please make sure to set AM = 0 (Horizontal writhing direction) in RGB-I/F mode.

10.3 RGB <=> Internal Clock Operation

The following sequence is the method to switch between the internal clock mode and the RGB-I/F mode.

[internal clock mode -> RGB-I/F mode]

11. Sequence

11.1 Power-ON Sequence

Register Data	Comment	Detail
VCC_ON	Power ON	
RESB = Low	Set RESB=0	
Wait ≥ 1 msec	Wait	
RESB = High	Set RESB=1	
Wait \geq 50 msec	Wait	
R07h 0000h	Set R07h to turn off the panel.	DTE=0, D[1:0]=00, GON=0

LCD_Power Supply ON sequence

R10h	0000h	Initialize Power Control 1 (Stop operation)	SAP=0,BT[2:0]=3'b000,APE=0,AP[2:0]=3'b000, SLP=0,STB=0
R11h	0007h	Initialize Power Control 2 (Stop step-up)	DC1[2:0]=3'b000,DC0[2:0] =3'b000,VC[2:0] =3'b111
R12h	0000h	Initialize Power Control 3 (stop regulator)	VCIRE=0,VRH[3:0]=4'b0000
R13h	0000h	Initialize Vcom amplitude	VDV[4:0]= 5'b00000
Wait >	200 msec		
R10h	1390h	Set Amp / VGH • VGL	SAP=1,BT[2:0]=3'b011,APE=1,AP[2:0]=3'b001, SLP=0,STB=0
R11h	0113h	Set Step-up circuit operation	DC1[2:0]=3'b001,DC0[2:0]=3'b001,VC[2:0]=3'b011
Wait >	50 msec		
R12h	008Bh	Set Regulator circuit operation (Vreg1out=4.375V)	VCIRE=1,VRH[3:0]=4'b1011
Wait >	50 msec		
R13h	1500h	Set Vcom amplitude (Vcompp=4.55V)	VDV[4:0]= 5'b10101
RA2h	0001h	OTP Vcom_DC data enable	VCM_EN = 1
REFh	0211h	Set test register	
Wait >	50 msec		

Display setting

R01h	0400h	Source direction / Gate arrangement	SM=1, SS=0
R02h	0200h	Set line inversion	B/C=1

SPECIFICATIONS № 12TLM047 Issue: Jul. 9, 20
This panel write display data to GRAM only when the INDEX register R22h is set. Please execute the refresh sequence 1 with in one of two ways as follows. 1) Execute the refresh sequence during 1V period with DE=Hi (non-active).
DE LILLLLLLLLLLLLLLLLLLLLLLLLLLLLLLLLLLL
SPI refresh sequence refresh sequence
refresh cycle (about 0.5sec)
2) Execute the refresh sequence that are divided during V porch period in order, and transfer R22h at the last of each divided sequence block. VSYNc VSYNc
ORTUS TECHNOLOGY CO.,LTD.

11.5 Refresh Sequence 2

When incorrect display occurred, that was not able to return to correct display by refresh sequence 1, by static electricity and such, read out the register and execute refresh sequence 2 as follows. Please read out and check this register regularly.

RE8h outputs 003Fh at correct display, but the other values at incorrect display. To set "standby" and "standby release" return from incorrect display to correct display. Therefore, if the output value of RE8h is not 003Fh, set "standby" and "standby release" with R10h.

Packing item name		Specs., Material
1	Tray	A-PET
2	Sealing bag	
3	Inner carton	Corrugated cardboard
(4)	Inner board	Corrugated cardboard
5	Outer carton	Corrugated cardboard
6	Drier	Moisture absorber
\bigcirc	Packing tape	
8	Extra outer carton	Corrugated cardboard

Dimension of extra outer carton			
D : Approx. (338mm)			
W : Approx.	(549mm)		
H : Approx. (198mm)			
Quantity of products packed in one carton:		96	
Gross weight : Approx.	7.4Kg		

16. Handling Instruction

16.1 Cautions for Handling LCD panels

Caution			
(1)	Do not make an impact on the LCD panel glass because it may break and you may get injured from it.		
(2)	If the glass breaks, do not touch it with bare hands. (Fragment of broken glass may stick you or you cut yourself on it.		
(3)	If you get injured, receive adequate first aid and consult a medial doctor.		
(4)	Do not let liquid crystal get into your mouth. (If the LCD panel glass breaks, try not let liquid crystal get into your mouth even toxic property of liquid crystal has not been confirmed.		
(5)	If liquid crystal adheres, rinse it out thoroughly. (If liquid crystal adheres to your cloth or skin, wipe it off with rubbing alcohol or wash it thoroughly with soap. If liquid crystal gets into eyes, rinse it with clean water for at least 15 minutes and consult an eye doctor.		
(6)	If you scrap this products, follow a disposal standard of industrial waste that is legally valid in the community, country or territory where you reside.		
(7)	Do not connect or disconnect this product while its application products is powered on.		
(8)	Do not attempt to disassemble or modify this product as it is precision component.		
(9)	If a part of soldering part has been exposed, and avoid contact (short-circuit) with a metallic part of the case etc. about FPC of this model, please. Please insulate it with the insulating tape etc. if necessary. The defective operation is caused, and there is a possibility to generation of heat and the ignition.		
(10) Since excess current protection circuit is not built in this TFT module, there is the possibility that LCD module or peripheral circuit become feverish and burned in case abnoramal operation is generated. We recommend you to add excess current protection circuit to power supply.			
(11)	11) The end part of glass and film of touch panel has conductivity, and avoid contact (short-circuit) with electroconductive case etc There is a possibility of setting up a defective touch panel, and insulate it for the case suppression (cushion etc.) if necessary, please.		
(12)	 12) The devices on the FPC are damageable to electrostatic discharge, because the terminals of the devices are exposed. Wear grounded wrist-straps and use electrostatic neutralization blowers to prevent static charge and discharge when handling the TFT monitors. Designate an appropriate operating area, and set equipment, tools, and machines properly when handling this product. 		
Caution This mark is used to indicate a precaution or an instruction which, if not correctly observed, may result in bodily injury, or material damages alone.			

16.2 Precautions for Handling

- Wear finger tips at incoming inspection and for handling the TFT monitors to keep display quality and keep the working area clean.
 Do not touch the surface of the monitor as it is easily scratched.
- Wear grounded wrist-straps and use electrostatic neutralization blowers to prevent static charge and discharge when handling the TFT monitors as the LED in this TFT monitors is damageable to electrostatic discharge. Designate an appropriate operating area, and set equipment, tools, and machines properly when handling this product.
- Avoid strong mechanical shock including knocking, hitting or dropping to the TFT monitors for protecting their glass parts. Do not use the TFT monitors that have been experienced dropping or strong mechanical shock.
- 4) Do not use or storage the TFT monitors at high temperature and high humidity environment. Particularly, never use or storage the TFT monitors at a location where condensation builds up.
- 5) Avoid using and storing TFT monitors at a location where they are exposed to direct sunlight or ultraviolet rays to prevent the LCD panels from deterioration by ultraviolet rays.
- 6) Do not stain or damage the contacts of the FPC cable .
 FPC cable needs to be inserted until it can reach to the end of connector slot.
 During insertion, make sure to keep the cable in a horizontal position to avoid an oblique insertion.
 Otherwise, it may cause poor contact or deteriorate reliability of the FPC cable.
- 7) The FPC cable is a design very weak to the bend and the pull as it is fixed with the tape. Do not bend or pull the FPC cable or carry the TFT monitor by holding the FPC cable.
- Peel off the protective film on the TFT monitors during mounting process. Refer to the section 16.5 on how to peel off the protective film. We are not responsible for electrostatic discharge failures or other defects occur when peeling off the protective film.

16.3 Precautions for Operation

- Since this TFT monitors are not equipped with light shielding for the driver IC, do not expose the driver IC to strong lights during operation as it may cause functional failures.
- 2) When turning off the power, turn off the input signal before or at the same timing of switching off the power.
- Do not plug in or out the FPC cable while power supply is switch on. Plug the FPC cable in and out while power supply is switched off.
- 4) Do not operate the TFT monitors in the strong magnetic field. It may break the TFT monitors.
- Do not display a fixed image on the screen for a long time.
 Use a screen-saver or other measures to avoid a fixed image displayed on the screen for a long time.
 Otherwise, it may cause burn-in image on the screen due the characteristics of liquid crystal.

SPECIFICATIONS № 12TLM047

Issue: Jul. 9, 2012

16.4 Storage Condition for Shipping Cartons

Storage environment

•	Temperature	0 to 40° C
•	Humidity	60%RH or less
		No-condensing occurs under low temperature with high humidity condition.
•	Atmosphere	No poisonous gas that can erode electronic components and/or wiring materials should be detected.
•	Time period	3 months
•	Unpacking	To prevent damages caused by static electricity, anti-static precautionary measures (e.g. earthing, anti-static mat) should be implemented.

Maximum piling up 7 cartons

16.5 Precautions for Peeling off the Protective film

The followings work environment and work method are recommended to prevent the TFT monitors from static damage or adhesion of dust when peeling off the protective films.

A) Work Environment

- a) Humidity: 50 to 70 %RH, Temperature15 to 27 °C
- b) Operators should wear conductive shoes, conductive clothes, conductive finger tips and grounded wrist-straps. Anti-static treatment should be implemented to work area's floor.
- c) Use a room shielded against outside dust with sticky floor mat laid at the entrance to eliminate dirt.

B) Work Method

- The following procedures should taken to prevent the driver ICs from charging and discharging.
- a) Use an electrostatic neutralization blower to blow air on the TFT monitors to its lower right when FPC is placed at the lower left.
 Optimize direction of the blowing air and the distance between the TFT monitors and the electrostatic neutralization blower.
- b) Peel off the tab slowly (spending more than 2 secs to complete) by pulling it to opposite direction.

Direction of blowing air (Optimize air direction and the distance)

APPENDIX

Reference Method for Measuring Optical Characteristics and Performance

1. Measurement Conditio	n
Measuring instruments:	CS1000 (KONICA MINOLTA), LCD7000 (OTSUKA ELECTRONICS), EZcontrast160D (ELDIM)
Driving condition:	Refer to the section "Optical Characteristics"
Measured temperature:	25°C unless specified
Measurement system:	See the chart below. The luminance meter is placed on the normal line of measurement system.
Measurement point:	At the center of the screen unless otherwise specified

Measurement is made after 30 minutes of lighting of the backlight.

Measurement point:

At the center point of the screen Brightness distribution: 9 points shown in the following drawing.

Dimensional ratio of active area

Backlight IL=35mA

1			–	
1			instrument	
	Response time	Measure output signal waveform by the luminance meter when raster of window pattern is changed from white to black and from black to white. White Black White White 100% 90%	instrument LCD7000	Black display [Data]=00h White display [Data]=3Fh TON Rise time TOFF Fall time
2	Contrast ratio	10% 0% Black TON Measure maximum luminance Y1([Data]=3Fh) and minimum luminance Y2([Data]=00h) at the center of	CS1000	
		the screen by displaying raster or window pattern. Then calculate the ratio between these two values. Contrast ratio = Y1/Y2 Diameter of measuring point: 8mmφ		
3	Viewing angle Horizontalθ Verticalφ	Move the luminance meter from right to left and up and down and determine the angles where contrast ratio is 5.	EZcontrast160D	
4	White chromaticity	Measure chromaticity coordinates x and y of CIE1931 colorimetric system at [Data] = 3Fh Color matching faction: 2°view	CS1000	
5	Burn-in	Visually check burn-in image on the screen after 2 hours of "window display" ([Data]=3Fh/00h).		At optimized VCOMDC
6	Center	Measure the brightness at the center of the screen.	CS1000	
	brightness			
7	Brightness distribution	(Brightness distribution) = 100 x B/A % A : max. brightness of the 9 points	CS1000

SPECIFICATIONS № 12TLM047

 $LE(\%)=\Delta V/(Vin-Vout)\times 100$

LEmax(%)=ΔVmax/(Vin-Vout)×100

distance

- Cautionary instruction to handle a Touch-panel
 - Cushion (between Touch Panel Chassis) Design
 - A cushion is required to be placed between Touch Panel and customer's chassis and there is a designated area to attach it. Attachment at area inside Input Prohibition Area must be forbidden. If cushion was located inside Input Prohibition Area, Upper Electrode may be push constantly and which may cause the electrode breakage at the position falling on the edge of adhesive; it eventually results in Touch Panel malfunction in the future. (Please see "NG-1")
 - Be attention to the cushion material you use. In the case that too soft cushion was used, the cushion may protrude into Prohibition Area by being push strongly; which may result in the electrode breakage. Eventually there is a chance that the electrode breakage leads to the malfunction of Touch Panel in the future. (Please see "NG-2")
 - Cushion is required to be attached at the side of Customer's chassis. Attaching a cushion at the side of Upper Electrode Film has a chance to deform the film and lead to the malfunction of Touch Panel in the future.

- Design Guidance of Chassis (Front Part)
 - Be attention to stay Input Prohibition Area away from touching and/or drawing by a stylus pens in order to avoid the electrode breakage and potential malfunction of Touch Panel. (Please see "NG-3") We recommend customers to design chassis (front case) being able to protect Input Prohibition Area.
 - Clearance between customer's chassis and Touch Panel surface is certainly required in order to avoid erroneous input caused by a collision of the edge of chassis. (Please see "NG-4") A clearance of 0.3 to 0.7mm is recommended.
- Design Guidance of Chassis (Side Part)
 - Upper Electrode and Lower Electrode fall on the edge of Touch Panel outline. Redundant design having enough clearance to avoid electric short with chassis is highly recommended.

- Example of Recommended Chassis Design Refer to "3.2 Outward Form".
- As a terminal resistance has individual specificity, calibration to align the displaying and the sensing position one each is mandatory before use.
