Table 11.11 Register R5 setting

AUTO_DP: When power on, select blank image display time decided by A_TIME (bit 5, 4) or DISP_ON (bit 6).

AUTO_DP = "L", Blank image display time decided by DISP_ON (bit 6).

AUTO_DP = "H", Blank image display time decided by A_TIME (bit 5, 4).

DISP_ON: When AUTO_DP (bit 7) = "L", and DISP_ON = "H", blank image display off, then display normal image.

A_TIME [1:0]: When AUTO_DP (bit 7) = "H", the blank image display time is decided by A_TIME

00: blank image display time is 8 VS time

01: blank image display time is 16 VS time

10: blank image display time is 32 VS time

11: blank image display time is 64 VS time

B_TIME [2:0]: When into STB mode, the blank image display time is decided by B_TIME.

000: blank image display time is 3 VS time.

001: blank image display time is 4 VS time.

010: blank image display time is 5 VS time.

011: blank image display time is 6 VS time.

100: blank image display time is 7 VS time.

101: blank image display time is 8 VS time.

110: blank image display time is 9 VS time.

111: blank image display time is 10 VS time.

11-2) Power ON/OFF sequence

To prevent the device damage from latch up, the power ON/OFF sequence shown below must be followed.

Power ON: VCC1, GND → VDDA, VSSA → V1 to V10

Power OFF: V1 to V10 → VDDA, VSSA → VCC1, GND

11-3) Power ON Control

Source drive has a power ON sequence control function. There are two kinds of the mode. One is auto mode, and another is manual mode.

Auto Mode: When power is ON, blank data is outputted for 16-frames(default value) first, from the falling edge of the following VS signal. The blank data would be gray level 255 for normally white panel.

It can be defined in register R5 A_TIME1(bit 5) and A_TIME0 (bit 4) when AUTO_DP(bit 7) = "H"

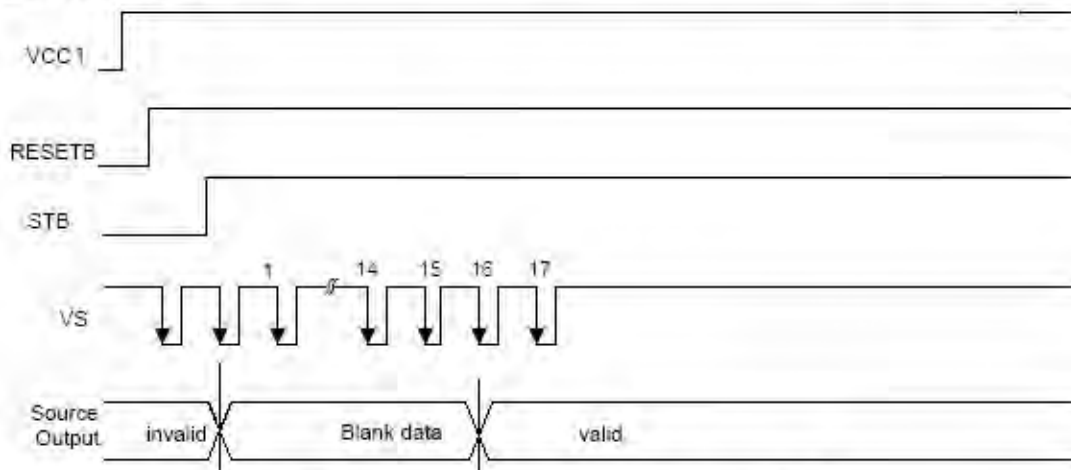

Figure 11-1 Power on control for Auto Mode

Manual Mode: When power is ON, you should set the register R5 AUTO_DP(bit 7) = "L" to stay at the manual mode. Blank data is outputted until the DISP_ON(bit 6) = H then display the normal image.

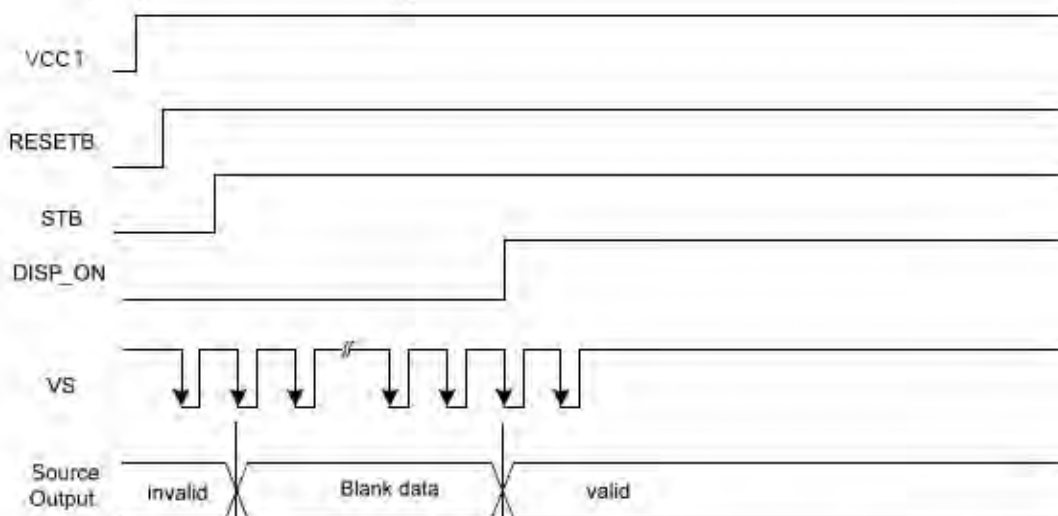

Figure 11-2 Power on control for Manual Mode

11-4) Standby ON/OFF Control

Source drive has a standby ON/OFF sequence control function. When STB pin is "L", blank data is outputted for 5-frames (default value) first, from the falling edge of the following VSYNC signal. The blank data would be gray level 255 for normally white panel. It can be defined in register R5 B_TIME[2:0] to adjust the frame number of the blank data.

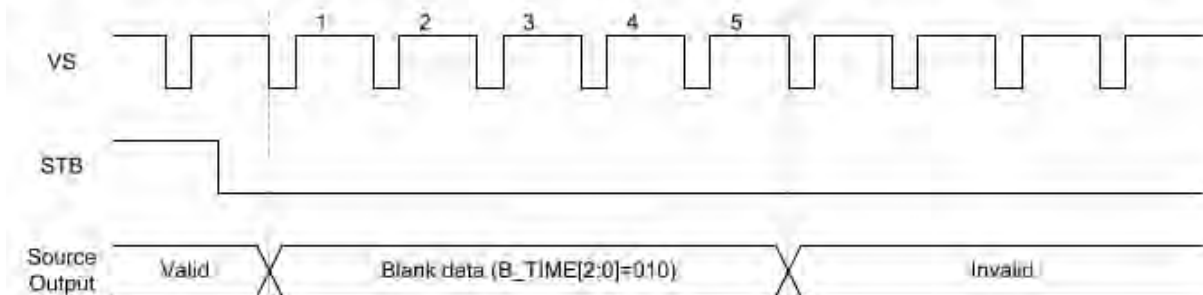

Figure 11-3 Standby ON/OFF Control

11-5) Reset when power on

Source drive is internally initialized by the global reset signal. RESETB. The reset input must be held for at least 1ms after power is stable.

Optical characteristics measuring configuration

Note 15-1: The definitions of viewing angles are as follow

Note 15-2 : The definition of contrast ratio $CR = \frac{\text{Luminance at gray level 63}}{\text{Luminance at gray level 0}}$

Note 15-3: Topcon BM-5A or BM-7 fast luminance meter 1° field of view is used in the testing (after 30 minutes' operation). The typical luminance value is measured at lamp current 6.0 mA.

Note 15-4: Definition of Response Time T_r and T_f :

Note 15-5: The uniformity of LCD is defined as

$$U = \frac{\text{The Minimum Brightness of the 9 testing Points}}{\text{The Maximum Brightness of the 9 testing Points}}$$

Luminance meter : BM-5A or BM-7 fast(TOPCON)

Measurement distance : 500 mm +/- 50 mm

Ambient illumination : < 1 Lux

Measuring direction : Perpendicular to the surface of module

The test pattern is white (Gray Level 63).

Note 15-6: Cross Talk (CTK) = $\frac{|YA - YB|}{YA} \times 100\%$

YA: Brightness of Pattern A

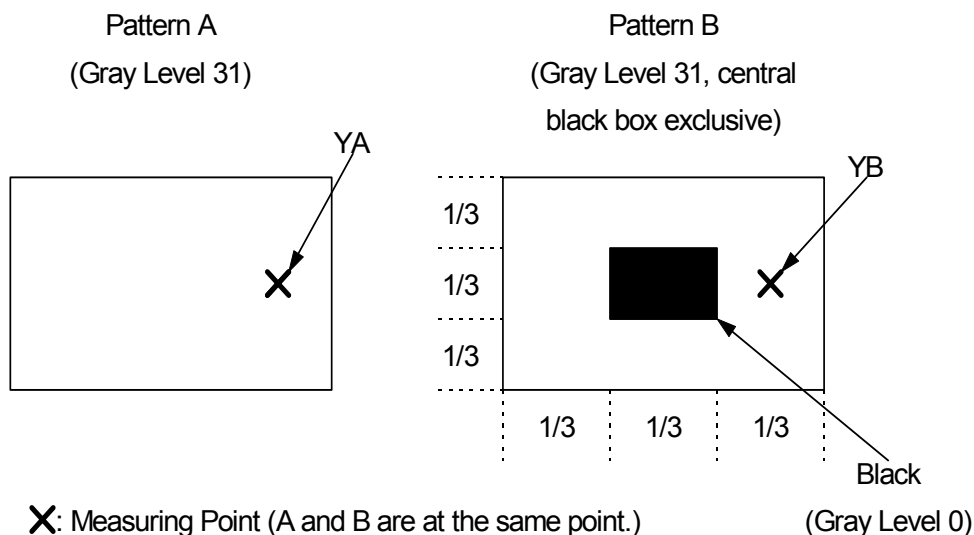

YB: Brightness of Pattern B

Luminance meter : BM 5A (TOPCON)

Measurement distance : 500 mm +/- 50 mm

Ambient illumination : < 1 Lux

Measuring direction : Perpendicular to the surface of module

16. Handling Cautions

16-1) Mounting of module

- a) Please power off the module when you connect the input/output connector.
- b) Please connect the ground pattern of the inverter circuit surely. If the connection is not perfect, some following problems may happen possibly.
 - 1.The noise from the backlight unit will increase.
 - 2.The output from inverter circuit will be unstable.
 - 3.In some cases a part of module will heat.
- c) Polarizer which is made of soft material and susceptible to flaw must be handled carefully.
- d) Protective film (Laminator) is applied on surface to protect it against scratches and dirt. It is recommended to peel off the laminator before use and taking care of static electricity.

16-2) Precautions in mounting

- a) When metal part of the TFT-LCD module (shielding lid and rear case) is soiled, wipe it with soft dry cloth.
- b) Wipe off water drops or finger grease immediately. Long contact with water may cause discoloration or spots.
- c) TFT-LCD module uses glass which breaks or cracks easily if dropped or bumped on hard surface. Please handle with care.
- d) Since CMOS LSI is used in the module. So take care of static electricity and earth yourself when handling.

16-3) Adjusting module

- a) Adjusting volumes on the rear face of the module have been set optimally before shipment.
- b) Therefore, do not change any adjusted values. If adjusted values are changed, the Specifications described may not be satisfied.

16-4) Others

- a) Do not expose the module to direct sunlight or intensive ultraviolet rays for many hours.
- b) Store the module at a room temperature place.
- c) The voltage of beginning electric discharge may over the normal voltage because of leakage current from approach conductor by to draw lump read lead line around.
- d) If LCD panel breaks, it is possibly that the liquid crystal escapes from the panel. Avoid putting it into eyes or mouth. When liquid crystal sticks on hands, clothes or feet. Wash it out immediately with soap.
- e) Observe all other precautionary requirements in handling general electronic components.
- f) Please adjust the voltage of common electrode as material of attachment by 1 module.

Ta: ambient temperature

Note: The protective film must be removed before temperature test

[Criteria]

In the standard conditions, there is not display function NG issue occurred. (including : line defect ,no image).All the cosmetic specification is judged before the reliability stress.
