**1. Application**

This data sheet applies to a color TFT LCD module, PD104VT2.

PD104VT2 module applies to OA product, car TV(must use Analog to Digital drive board), which require high quality flat panel display.If you must use in high reliability environment can't over reliability test condition.

Prime View assume no responsibility for any damage resulting from the use of the device which dose not comply with the instructions and the precautions in these specification sheet.

**2. Features**

- . Support the DENB mode
- . Image Reversion : Up/Down and Left/Right
- . Amorphous silicon TFT LCD panel with back-light unit
- . Pixel in stripe configuration
- . Slim and compact, designed for O/A application
- . Display Colors : 262,144 colors
- . Optimum Viewing Direction : 6 o'clock
- . +3.3V DC supply voltage for TFT LCD panel driving
- . Backlight driving DC/AC inverter not included in this module
- . TTL transmission interface

**3.Mechanical Specifications**

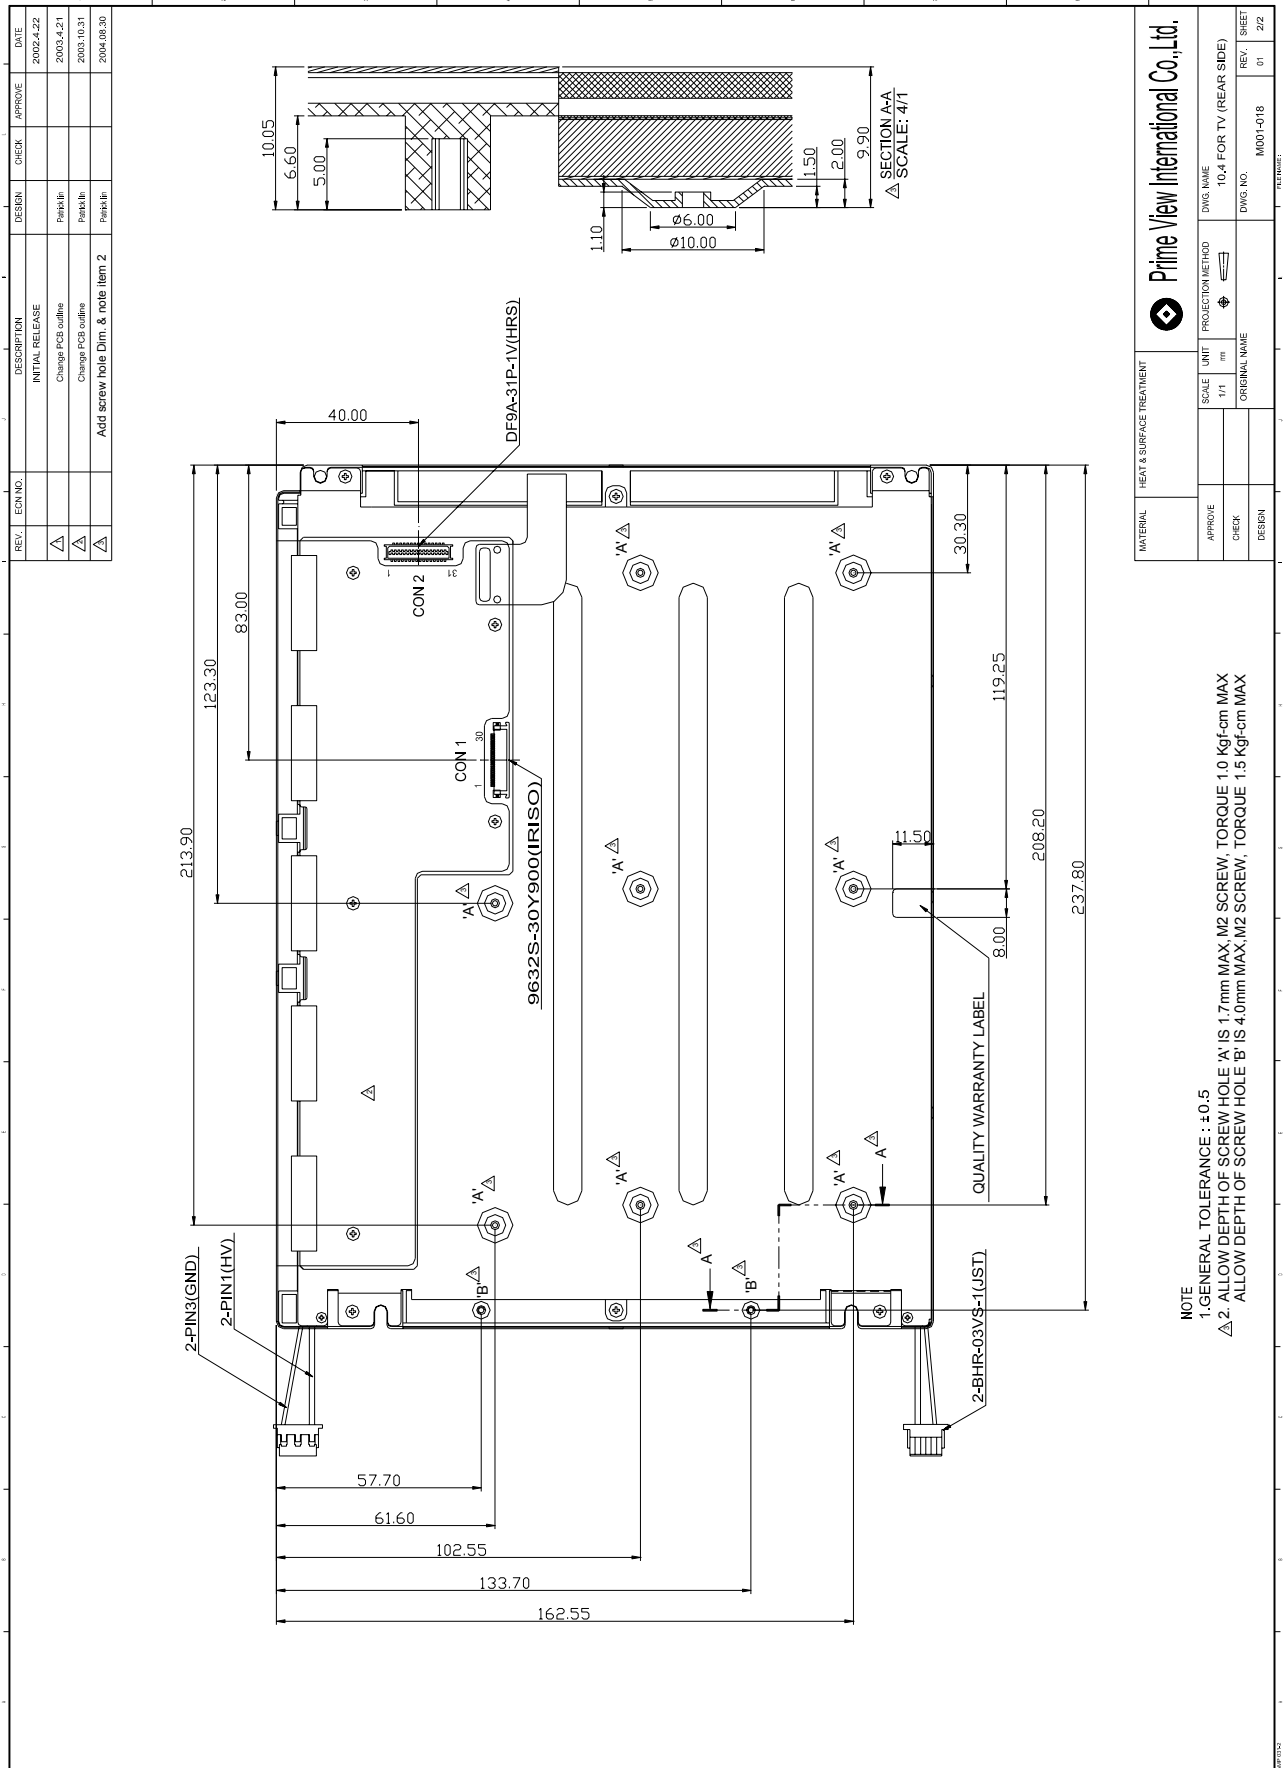

| Parameter           | Specifications                     | Unit |
|---------------------|------------------------------------|------|
| Screen Size         | 26.4(diagonal)                     | cm   |
|                     | 10.4 (diagonal)                    | inch |
| Display Format      | 640×(R, G, B)×480                  | dot  |
| Display Colors      | 262,144                            |      |
| Active Area         | 211.2(H)×158.4(V)                  | mm   |
| Pixel Pitch         | 0.330(H)×0.330(V)                  | mm   |
| Pixel Configuration | Stripe                             |      |
| Outline Dimension   | 243.0(w)×185.1 (H)×12.5 (typ.) (D) | mm   |
| Weight              | 516±10                             | g    |
| Back-light          | CCFL, 2 tubes                      |      |
| Surface treatment   | Anti-glare and hard-coating        |      |
| Display mode        | Normally white                     |      |

#### 4.Mechanical Drawing of TFT-LCD Module

### Outline Drawing : Front View (unit mm)

## Outline Drawing : Rear View (unit mm)

## 5.Input / Output Terminals

### 5-1) TFT-LCD Panel Driving

Connector type : Con 2 mode DF9A-31P-1V(HRS)

| Pin No. | Symbol     | Function                                                                                       | Remark               |
|---------|------------|------------------------------------------------------------------------------------------------|----------------------|
| 1       | GND        | Ground (0V)                                                                                    |                      |
| 2       | CLK        | Clock Signal for Sampling Image Digital Data                                                   |                      |
| 3       | Hsync      | Horizontal Synchronous Signal                                                                  |                      |
| 4       | Vsync      | Vertical Synchronous Signal                                                                    |                      |
| 5       | GND        | Ground (0V)                                                                                    |                      |
| 6       | R0         | Red Image Data Signal (LSB)                                                                    |                      |
| 7       | R1         | Red Image Data Signal                                                                          |                      |
| 8       | R2         | Red Image Data Signal                                                                          |                      |
| 9       | R3         | Red Image Data Signal                                                                          |                      |
| 10      | R4         | Red Image Data Signal                                                                          |                      |
| 11      | R5         | Red Image Data Signal (MSB)                                                                    |                      |
| 12      | GND        | Ground (0V)                                                                                    |                      |
| 13      | G0         | Green Image Data Signal (LSB)                                                                  |                      |
| 14      | G1         | Green Image Data Signal                                                                        |                      |
| 15      | G2         | Green Image Data Signal                                                                        |                      |
| 16      | G3         | Green Image Data Signal                                                                        |                      |
| 17      | G4         | Green Image Data Signal                                                                        |                      |
| 18      | G5         | Green Image Data Signal (MSB)                                                                  |                      |
| 19      | GND        | Ground (0V)                                                                                    |                      |
| 20      | B0         | Blue Image Data Signal (LSB)                                                                   |                      |
| 21      | B1         | Blue Image Data Signal                                                                         |                      |
| 22      | B2         | Blue Image Data Signal                                                                         |                      |
| 23      | B3         | Blue Image Data Signal                                                                         |                      |
| 24      | B4         | Blue Image Data Signal                                                                         |                      |
| 25      | B5         | Blue Image Data Signal (MSB)                                                                   |                      |
| 26      | GND        | Ground (0V)                                                                                    |                      |
| 27      | DENB       | Data Enable Signal                                                                             | Note 5-1<br>Note 5-2 |
| 28      | VCC        | DC +3.3V Power Supply                                                                          |                      |
| 29      | VCC        | DC +3.3V Power Supply                                                                          |                      |
| 30      | R/L<br>U/D | Horizontal Image Shift-direction Select Signal<br>Vertical Image Shift-direction Select Signal | Note 5-4             |
| 31      | GND        | Ground (0V)                                                                                    | Note 5-5             |

Note 5-5: This pin must connect to ground, if without grounding the panel can't turn on.

Note 5-1 : The relationship between DENB & SYNC. mode

1. DENB mode with the top priority.
2. When working with the SYNC. mode, The Hsync and Vsync determine the timings.
3. This pin must connect to ground, if without DENB.

| Mode<br>SYNC.      | DENB       | VGA      |
|--------------------|------------|----------|
| Hsync Polarization | Don't care | Negative |
| Vsync Polarization | Don't care | Negative |

Note 5-2 : DENB input signal.

If customer wanted to off the DENB mode , you must keep the DENB (pin 27) always High or Low.

Note 5-4 : The definitions of U/D & R/L

U/D & R/L (PIN 30)= High

U/D & R/L (PIN 30)= Low

## 5-2) Backlight driving

Connector type:BHR-03VS-1 (JST) , PIN No 3pin, pitch=4mm

| Pin No | Symbol | Description                       | Remark                         |
|--------|--------|-----------------------------------|--------------------------------|
| 1      | VL1    | Input terminal (Hi voltage side)  | Wire color : Pink              |
| 2      | NC     | No Connection                     |                                |
| 3      | VL2    | Input terminal (Low voltage side) | Wire Color : White<br>Note 5-3 |

Note 5-3 : Low voltage side of backlight inverter connects with ground of inverter circuits.

## 6. Absolute Maximum Ratings :

The followings are maximum values , which if exceeded, may cause faulty operation or damage to the unit.

GND=0V, Ta=25°C

| Parameters                  | Symbol          | MIN. | MAX.                 | Unit | Remark   |
|-----------------------------|-----------------|------|----------------------|------|----------|
| Supply Voltage              | V <sub>CC</sub> | -0.3 | +4.0                 | V    |          |
| Input Signal Voltage        | V <sub>IN</sub> | -0.3 | V <sub>CC</sub> +0.3 | V    | Note 6-1 |
| Backlight Driving Voltage   | V <sub>L</sub>  | -    | 2000                 | V    |          |
| Backlight Driving Frequency | F <sub>L</sub>  | 0    | 100                  | KHz  |          |
| Storage Temperature         | T <sub>ST</sub> | -10  | +70                  | °C   |          |
| Operating Temperature       | T <sub>OP</sub> | -10  | +60                  | °C   | Note 6-2 |

Note 6-1 : Input signals include CLK , Hsync , Vsync , DENB , R[0:5] , G[0:5] and B[0:5].

Note 6-2 : Optical characteristics shown in Table 9-1 are measured under Ta=+25°C .

## 7. Electrical Characteristics

### 7-1) Recommended Operating Conditions:

GND = 0V , Ta = 25°C

| Item                   |         | Symbol           | Min.                | Typ. | Max.                | Unit | Remark                           |

| Lamp Life Time         |         |                  | 30000               | -    |                     | Hrs  | Note 7-5                         |

Note 7-1 : To test the current dissipation of Vcc, using the “color bars” testing pattern shown as below

|   |   |   |   |   |   |   |   |
|---|---|---|---|---|---|---|---|
| 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 |
|---|---|---|---|---|---|---|---|

1. White
2. Yellow
3. Cyan
4. Green
5. Magenta
6. Red
7. Blue
8. Black

Idd current dissipation testing pattern

Note 7-2 : The back-light driving waveform should be as closed to sine-wave as possible.

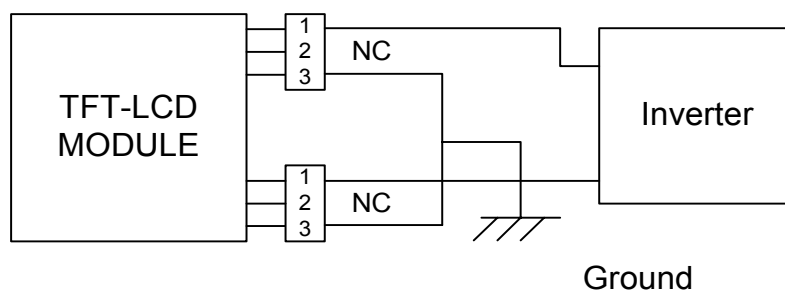

In order to satisfy the quality of B/L , no matter use what kind of inverter , the output lamp current must between Min. and Max. to avoid the abnormal display image caused by B/L.

Note 7-3 : Not including the efficiency of backlight DC/AC inverter

The kick-off time must larger than 1 second

Note 7-4 : Lamp current is measured with current meter for high frequency as shown below

Lamp current dissipation testing configuration

Note1: Pin 1 is high voltage, Pin 2 NC, Pin 3 ground.

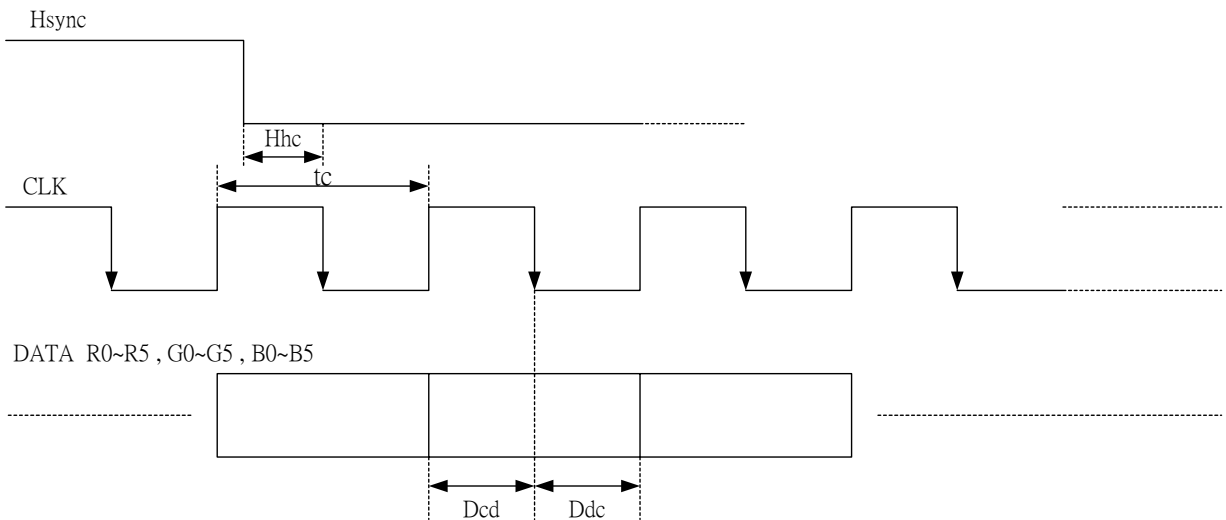

Note2: One Lamp Current is 6mA. Two Lamp 12mA.

Note 7-5: The life time is determined as the time at which brightness of lamp is 50% compare to that of initial value at the typical lamp current.

## 7-2) Input / Output signal timing chart

| Parameters |                            | Symbol      | Min. | Typ.   | Max.  | Unit | Note     |
|------------|----------------------------|-------------|------|--------|-------|------|----------|
| CLK        | Frequency                  | $F_c=1/T_c$ |      | 25.175 |       | MHz  | Note 7-6 |

Note 7-6 : Tc is the period of sampling clock. In case of low-frequency , the image-flicker may occur.

**7-3) Display Time Range**
**(1) Vertical Timing :**

**(2) Horizontal Timing :**

**(3) DENB Timing :**

### 1. Detail of Horizontal Timing :

#### (a) VGA-480 Mode (Hsync = Negative Polarization)

| Item | Description        | Clock Cycles | Time           |
|------|--------------------|--------------|----------------|
| Hpw  | Horizontal Width   | 96           | 3.813 $\mu s$  |
| Hbp  | Horizontal B-Porch | 48           | 1.907 $\mu s$  |
| Hdp  | Horizontal Display | 640          | 25.422 $\mu s$ |
| Hfp  | Horizontal F-Porch | 16           | 0.636 $\mu s$  |
| Hp   | Horizontal Total   | 800          | 31.778 $\mu s$ |

### 1. Detail of Vertical Timing :

#### (a) VGA-480 Mode (Vsync = Negative Polarization)

| Item | Description      | Horizontal Lines | Time          |
|------|------------------|------------------|---------------|
| Vpw  | Vertical Width   | 2                | 63.5 $\mu s$  |
| Vbp  | Vertical B-Porch | 33               | 1.049 ms      |
| Vdp  | Vertical Display | 480              | 15.253 ms     |
| Vfp  | Vertical F-Porch | 10               | 317.8 $\mu s$ |
| Vp   | Vertical Total   | 525              | 16.683 ms     |

**7-5) Display Color and Gray Scale Reference**

| Color        |            | Input Color Data |    |    |    |    |    |       |    |    |    |    |    |      |    |    |    |    |    |
|--------------|------------|------------------|----|----|----|----|----|-------|----|----|----|----|----|------|----|----|----|----|----|
|              |            | Red              |    |    |    |    |    | Green |    |    |    |    |    | Blue |    |    |    |    |    |

## 8. Power On Sequence

1. The supply voltage for input signals should be same as  $V_{CC}$ .
2. When the power is off , please keep whole signals (Hsync, Vsync, CLK, Data) low level or high impedance

## 9. Optical Characteristics

### 9-1) Specification:

$T_a=25^{\circ}\text{C}$

| Parameter            | Symbol     | Condition                    | MIN.     | TYP.     | MAX.  | Unit                   | Remarks  |
|----------------------|------------|------------------------------|----------|----------|-------|------------------------|----------|
| Viewing Angle        | Horizontal | $\theta$                     | $\pm 40$ | $\pm 45$ |       | deg                    | Note 9-3 |
|                      | Vertical   | $\theta$ (to 12 o'clock)     | 10       | 15       | -     | deg                    |          |

All the optical measurement shall be executed 30 minutes after backlight being turn-on. The optical characteristics shall be measured in dark room (ambient illumination on panel surface less than 1 Lux). The measuring configuration shows as following figure.

Optical characteristics measuring configuration

Note 9-1 : The definitions of viewing angles are as follow

Note 9-2 : The definition of contrast ratio  $CR = \frac{\text{Luminance at gray level 63}}{\text{Luminance at gray level 0}}$

Note 9-3 : Topcon BM-5A luminance meter 1° field of view is used in the testing (after 30 minutes' operation). The typical luminance value is measured at lamp current 12.0 mA.

Note 9-4: Definition of Response Time  $T_r$  and  $T_f$ :

Note 9-5 : The uniformity of LCD is defined as

$$U = \frac{\text{The Minimum Brightness of the 9 testing Points}}{\text{The Maximum Brightness of the 9 testing Points}}$$

Luminance meter : BM-5A or BM-7 fast (TOPCON)

Measurement distance : 500 mm +/- 50 mm

Ambient illumination : < 1 Lux

Measuring direction : Perpendicular to the surface of module

The test pattern is white (Gray Level 63).

Note 9-6 : Cross Talk (CTK) =  $\frac{|Y_A - Y_B|}{Y_A} \times 100\%$

Y<sub>A</sub> : Brightness of Pattern A

Y<sub>B</sub> : Brightness of Pattern B  
Pattern A

(Gray Level 31)

Pattern B

(Gray Level 31, central  
black box exclusive)

**X**: Testing Point (A and B are at the same point.)

(Gray Level 0)

**10. Handling Cautions****10-1) Mounting of module**

1. Please power off the module when you connect the input/output connector.
- b) Please connect the ground pattern of the inverter circuit surely. If the connection is not perfect, some following problems may happen possibly.
  1. The noise from the backlight unit will increase.
  1. The output from inverter circuit will be unstable.
  1. In some cases a part of module will heat.
- c) Polarizer which is made of soft material and susceptible to flaw must be handled carefully.
- d) Protective film (Laminator) is applied on surface to protect it against scratches and dirt. It is recommended to peel off the laminator before use and taking care of static electricity.

**10-2) Precautions in mounting**

- a) When metal part of the TFT-LCD module (shielding lid and rear case) is soiled, wipe it with soft dry cloth.
- b) Wipe off water drops or finger grease immediately. Long contact with water may cause discoloration or spots.
- c) TFT-LCD module uses glass which breaks or cracks easily if dropped or bumped on hard surface. Please handle with care.
- d) Since CMOS LSI is used in the module. So take care of static electricity and earth yourself when handling.

**10-3) Adjusting module**

- a) Adjusting volumes on the rear face of the module have been set optimally before shipment.
- b) Therefore, do not change any adjusted values. If adjusted values are changed, the specifications described may not be satisfied.

**10-4) Others**

- a) Do not expose the module to direct sunlight or intensive ultraviolet rays for many hours.
- b) Store the module at a room temperature place.
- c) The voltage of beginning electric discharge may over the normal voltage because of leakage current from approach conductor by to draw lump read lead line around.
- d) If LCD panel breaks, it is possibly that the liquid crystal escapes from the panel. Avoid putting it into eyes or mouth. When liquid crystal sticks on hands, clothes or feet. Wash it out immediately with soap.
- e) Observe all other precautionary requirements in handling general electronic components.
- f) Please adjust the voltage of common electrode as material of attachment by 1 module.

**10-5) Polarizer mark**

The polarizer mark is to describe the direction of wide view angle film how to match up with the rubbing direction.

**11. Reliability Test**

Ta: ambient temperature

Note 11-1 : The protective film must be removed before temperature test.

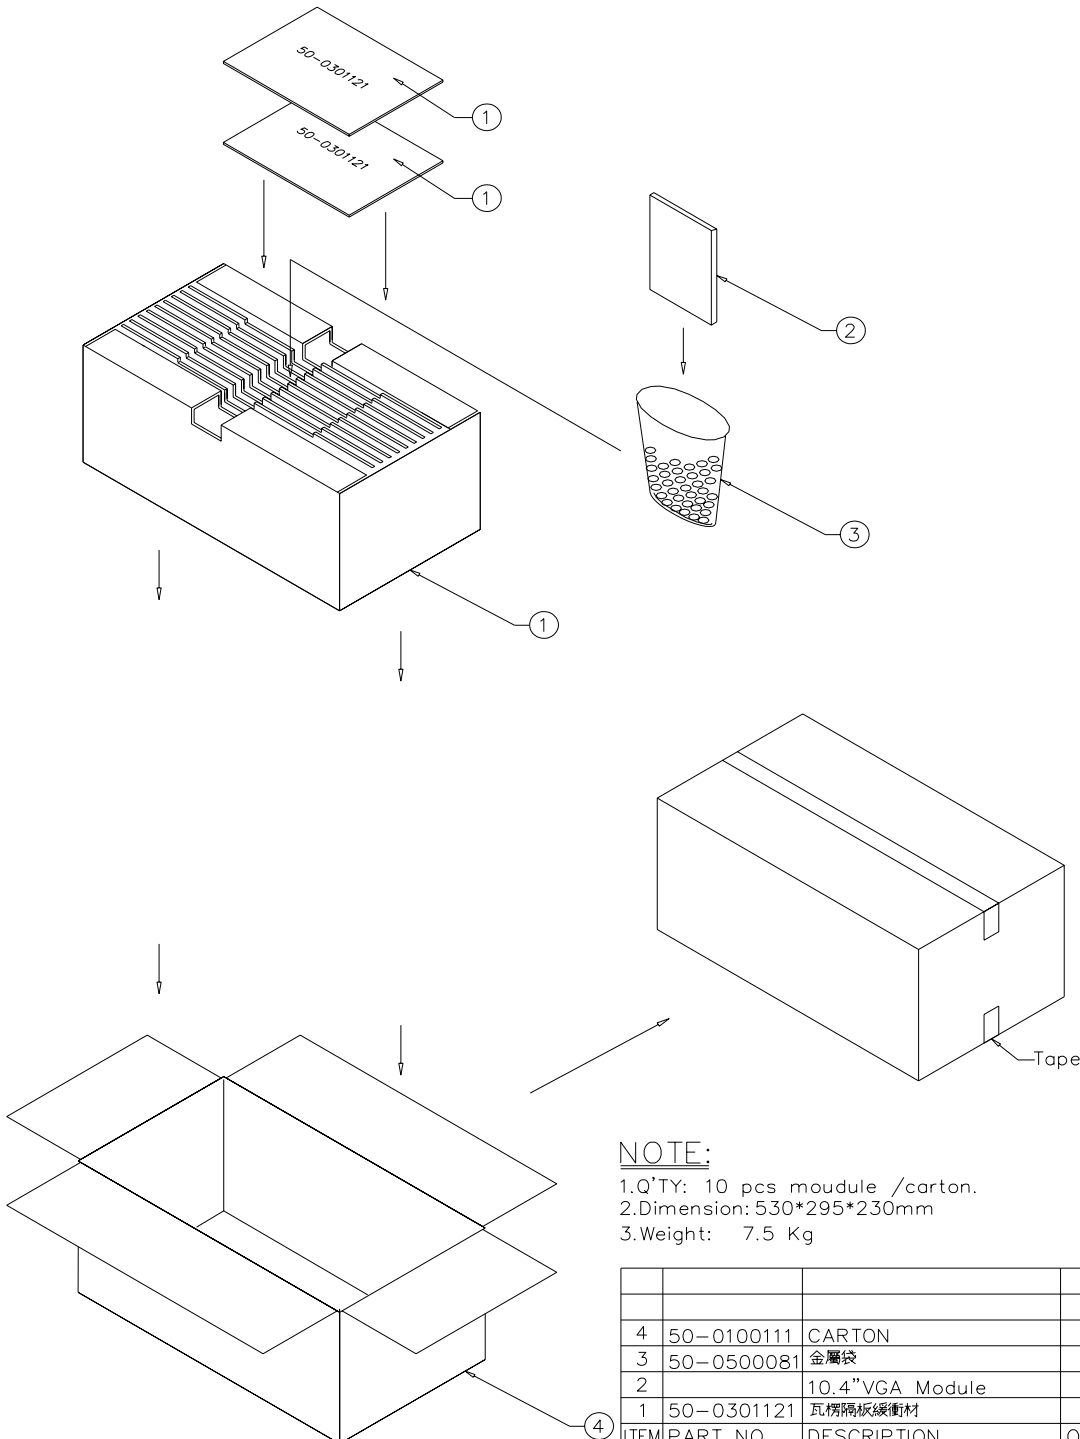

**[Judgement Criteria]**

Under the display quality test conditions with normal operation state , there should be no change which may affect practical display function.
