1. Application

This technical specification applies to 3.5" color TFT-LCD module , PW035XS4.

The applications of the panel are car TV, portable DVD, DV,GPS, multimedia applications and other AV systems..

2. Features

. Amorphous silicon TFT-LCD panel with LED Backlight unit.

- . Compatible with NTSC & PAL system
- . Pixel in stripe configuration
- . Slim and compact

. Image Reversion : Up/Down and Left/Right

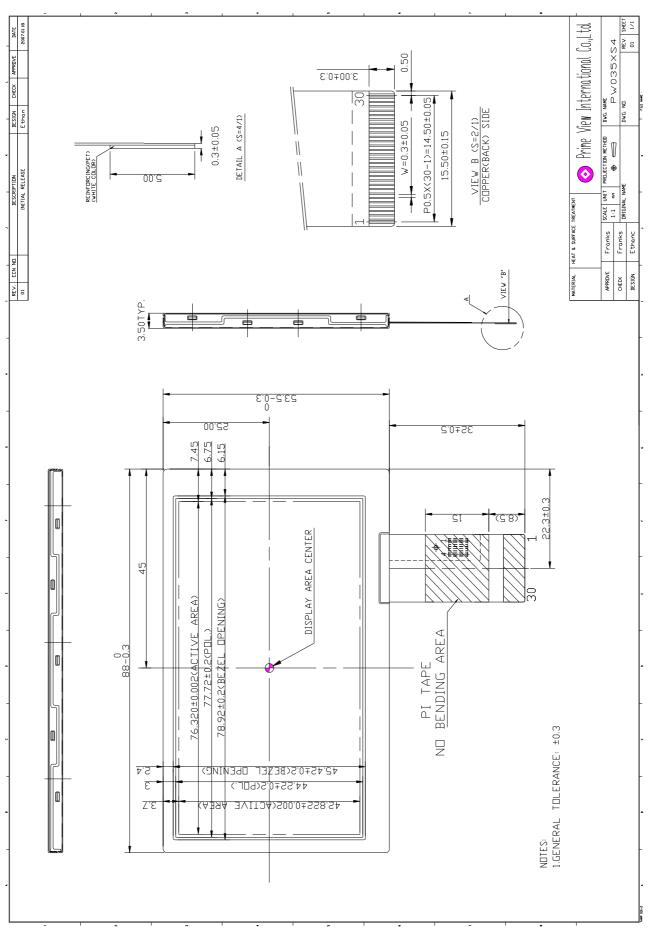

. Support multi display mode (If you use this mode ,you must use PVI-1004D's timing controller (made by PVI))

.Wide viewing angle

PW035XS4

Note 10-3 : Topcon BM-7(fast) luminance meter 1.0° field of view is used in the testing (after 10 minutes operation).

U = The Minimum Brightness of the 9 testing Points The Maximum Brightness of the 9 testing Points

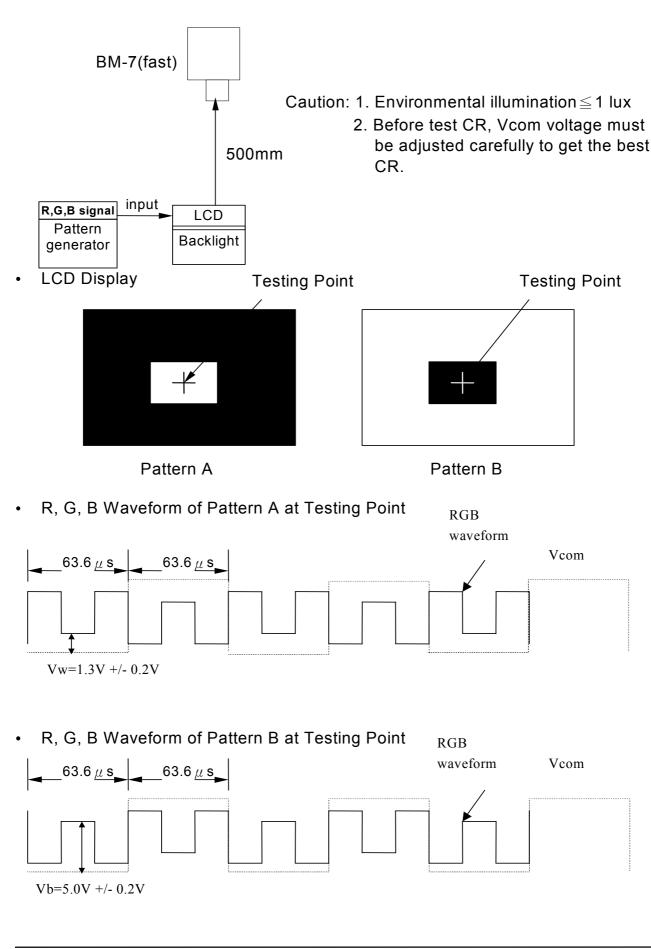

Note 10-4 : The definition of response time :

Note 10-5: The "LED Life time " is defined as the module brightness decrease to 50% original Brightness that the ambient temperature is 25° C and I_{LED} =20mA.

PW035XS4

10-2) Testing configuration

- 11-1) Mounting of module
 - a) Please power off the module when you connect the input/output connector.
 - b) Please connect the ground pattern of the inverter circuit surely. If the connection is not perfect, some following problems may happen possibly.

PW035X

- 1. The noise from the backlight unit will increase.
- 2. The output from inverter circuit will be unstable.
- 3.In some cases a part of module will heat.
- c) Polarizer which is made of soft material and susceptible to flaw must be handled carefully.
- d) Protective film (Laminator) is applied on surface to protect it against scratches and dirt. It is recommended to peel off the laminator before use and taking care of static electricity.
- 11-2) Precautions in mounting
 - a) Wipe off water drops or finger grease immediately. Long contact with water may cause discoloration or spots.
 - b) TFT-LCD module uses glass which breaks or cracks easily if dropped or bumped on hard surface. Please handle with care.
 - c) Since CMOS LSI is used in the module. So take care of static electricity and earth yourself when handling.

11-3) Others

- a) Do not expose the module to direct sunlight or intensive ultraviolet rays for many hours.
- b) The voltage of beginning electric discharge may over the normal voltage because of leakage current from approach conductor by to draw lump read lead line around.
- c) If LCD panel breaks, it is possibly that the liquid crystal escapes from the panel. Avoid putting it into eyes or mouth. When liquid crystal sticks on hands, clothes or feet. Wash it out immediately with soap.
- d) Observe all other precautionary requirements in handling general electronic components.

12. Reliability Test

| 9 | Electrostatic Discharge Test (non-operating) | 200pF, 0Ω Machine mode = $\pm 200V$ 1 time / each terminal | |

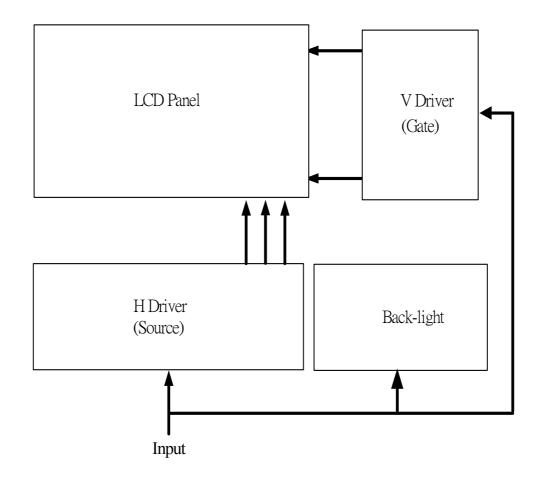

Ta: ambient temperature

[Criteria]

In the standard conditions, there is not display function NG issue occurred. (including : line defect ,no image). All the cosmetic specification is judged before the reliability stress.
