1. Application

This technical specification applies to 6.2" color TFT-LCD module, PW062XS8 The applications of the panel are car TV, portable DVD, GPS, multimedia applications and others AV system.

2. Features

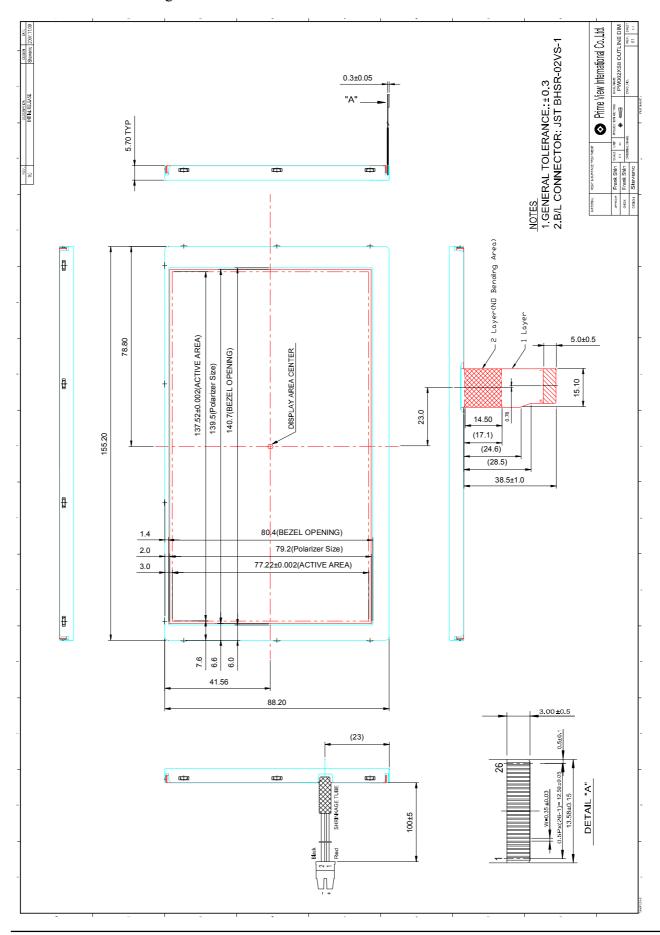

- . Amorphous silicon TFT-LCD panel with LED Back-Light unit.
- . Pixel in stripe configuration
- . Compatible with NTSC and PAL system
- . Slim and compact
- . Up / Down and Left / Right Image reversal
- . Support multi display mode (If you use this mode, you must use PVI-1004D's timing controller (made by PVI))

Note 10-1: The definitions of viewing angles

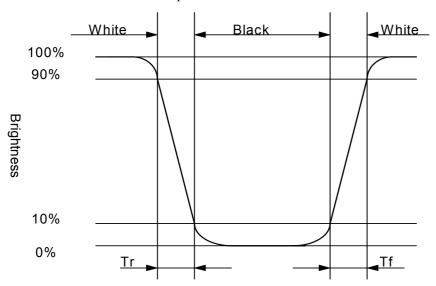

Note 10-2 : CR = Luminance when Testing point is White

Luminance when Testing point is Black

(Testing configuration see 10-2)

Contrast Ratio is measured in optimum common electrode voltage.

Note 10-3: The definition of response time:

Note 10-4: Topcon BM-7(fast) luminance meter 1° field of view is used in the testing (after 20~30 minutes operation).

Note 10-5: The uniformity of LCD is defined as

U = The Minimum Brightness of the 9 testing Points
The Maximum Brightness of the 9 testing Points

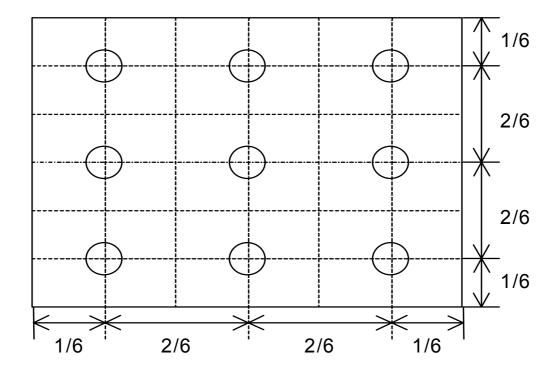

Luminance meter: BM-5A or BM-7 fast (TOPCON)

Measurement distance: 500 mm +/- 50 mm

Ambient illumination: < 1 Lux

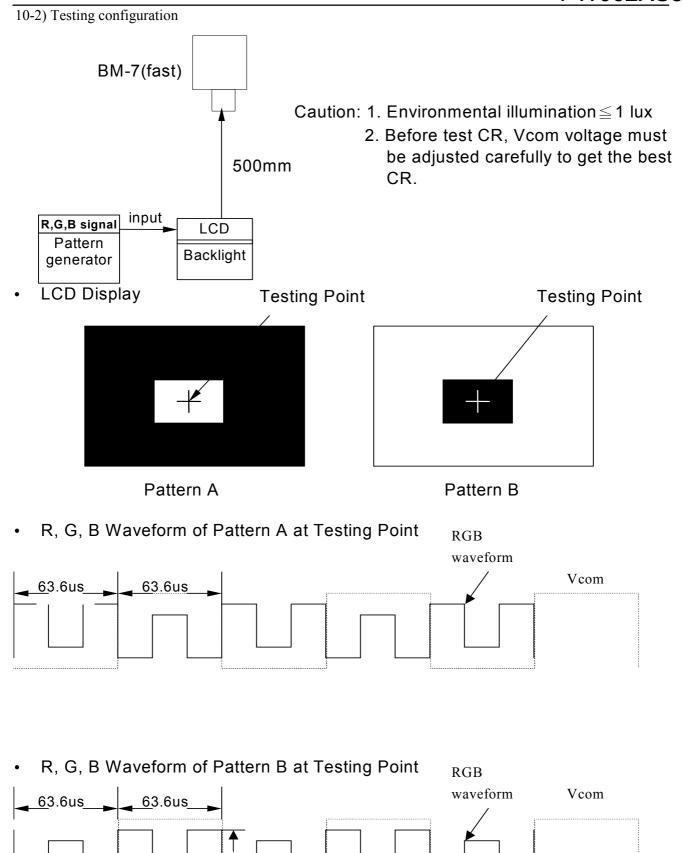

Measuring direction: Perpendicular to the surface of module

The test pattern is white (Gray Level 63).

Note 10-6: The "LED Life time " is defined as the module brightness decrease to 50% original Brightness that the ambient temperature is 25° C and I_{LED} = 160 mA.

RGB Signal Level

=4.0 Vp-p(white to black)

11. Handling Cautions

- 11-1) Mounting of module
 - a) Please power off the module when you connect the input/output connector.
 - b) Polarizer which is made of soft material and susceptible to flaw must be handled carefully.
 - c) Protective film (Laminator) is applied on surface to protect it against scratches and dirt.
 - d) Please following the tear off direction as figure 11-1 to remove the protective film as slowly as possible, so that electrostatic charge can be minimized.
- 11-2) Precautions in mounting
 - a) Wipe off water drops or finger grease immediately. Long contact with water may cause discoloration or spots.
 - b) TFT-LCD module uses glass which breaks or cracks easily if dropped or bumped on hard surface. Please handle with care.
 - c) Since CMOS LSI is used in the module. So take care of static electricity and earth yourself when handling.
- 11-3) Polarizer mark

The polarizer mark is to describe the direction of wide view angle film how to mach up with the rubbing direction.

- 11-4) Others
 - a) Do not expose the module to direct sunlight or intensive ultraviolet rays for many hours.
 - b) Store the module at a room temperature place.
 - c) The voltage of beginning electric discharge may over the normal voltage because of leakage current from approach conductor by to draw lump read lead line around.
 - d) If LCD panel breaks, it is possibly that the liquid crystal escapes from the panel. Avoid putting it into eyes or mouth. When liquid crystal sticks on hands, clothes or feet. Wash it out immediately with soap.
 - e) Observe all other precautionary requirements in handling general electronic components.
