## 2. APPLICATION INFORMATION FOR DID (Digital Information Display)

A DID's screen may display the sudden image such as an image retention.  
To extend the lifetime and optimize a function of module, the below-mentioned operating conditions are required.

### 2.1 Normal operating condition

- a. Temperature:  $20 \pm 15^{\circ}\text{C}$
- b. Humidity:  $55 \pm 20\%$
- c. Display pattern: Moving image or image, which switches regularly.  
Note) The sudden image on the screen can be displayed after the static image is shown in the long-term.

### 2.2 The operating conditions when the module is operated under the abnormal condition.

- a. Ambient condition  
-It is recommended to set the DID up in the well-ventilated place.
- b. The function of power off and screen saver  
-The function of periodical power-off or a screen saver is needed when the static image is displayed in the long-term.

### 2.3 Operating conditions to prevent the sudden display resulted from displaying the static image in the long-term.

- a. The proper operating time: Under 20 hours a day.
- b. The moving image shall be inserted between the static displays periodically.  
-The refresh time for liquid crystal is needed.
- c. The periodic changing of background color and character's color(image)  
-Use the different color for background and character (image) respectively.  
-Change colors periodically.
- d. Avoid combining the color for background with the color for character, which has a largely different luminance.

Note (1) Abnormal condition means all operating condition except normal operating condition.

Note (2) The moving image or black pattern is strongly recommended as a screen saver.

### 2.4 Only the lifetime of DID stated in this spec is guaranteed if the DID is used under the proper operating conditions.

### 3. OPTICAL CHARACTERISTICS

The optical characteristics should be measured in a dark room or equivalent.

### 6.4 THE SEQUENCE OF POWER ON AND OFF

To prevent the product from being latched up or the DC in the LCD module from starting an operation, the order to turn the power on and off should be changed to the order as shown in the diagram below.

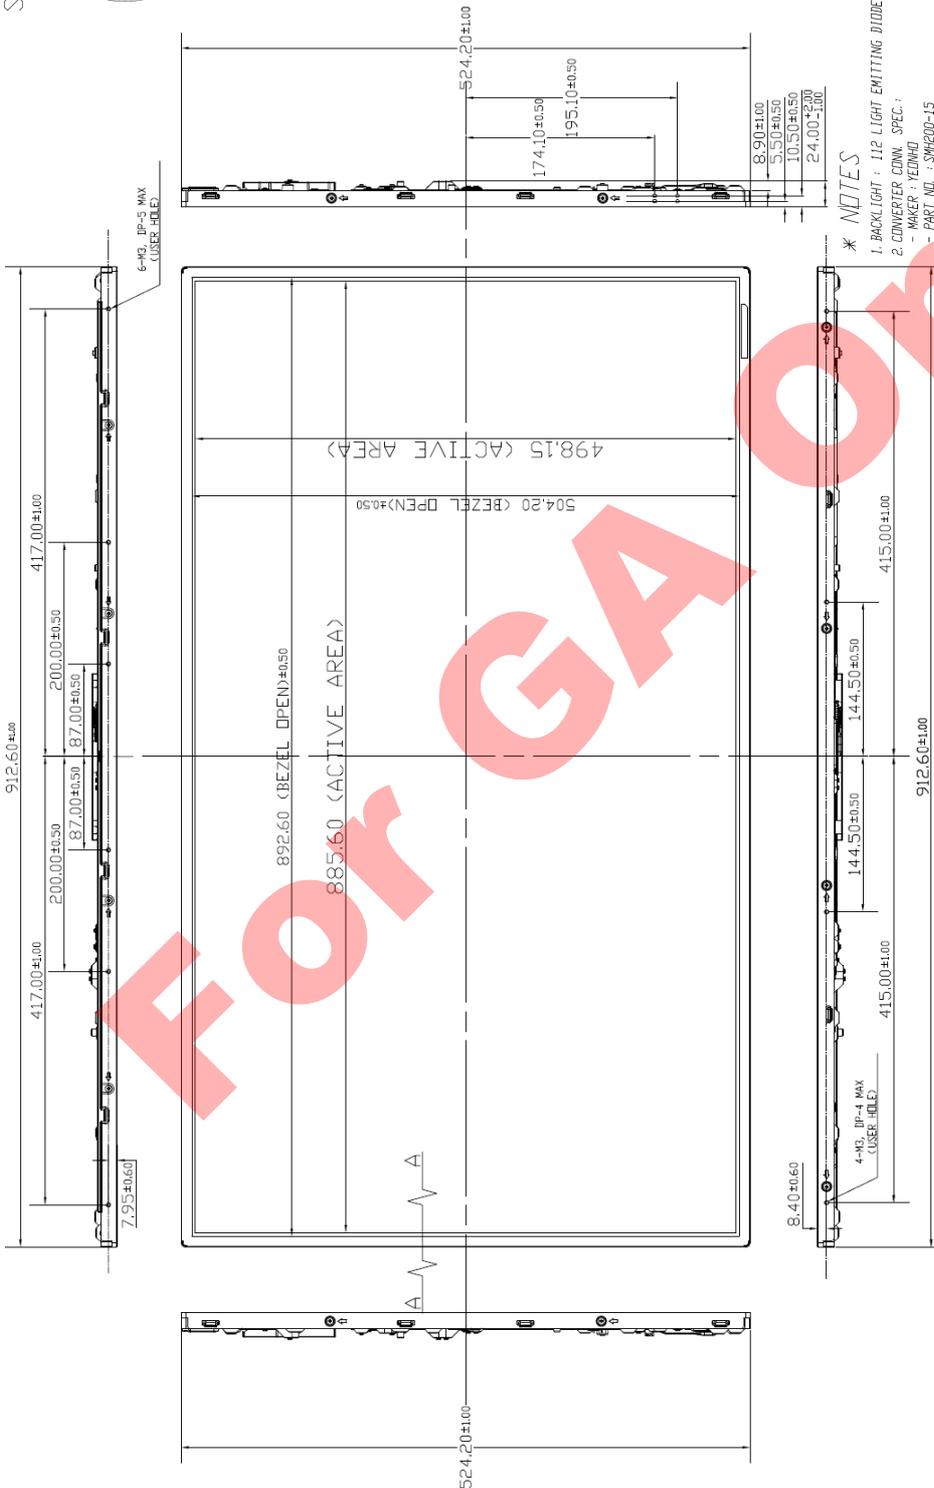

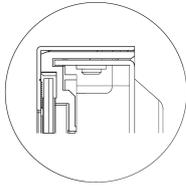

Timing	Remarks
$T_1$	The time, during which the level of $V_{DD}$ is rising from 10% to 90%.
$T_2$	The changing time, during which the $V_{DD}$ starts rising beyond 90% until the valid data of signal started coming in.
$T_3$	The changing time, during which the valid data of signal starts leaving out until the $V_{DD}$ starts falling below 90%.
$T_4$	The changing time, during which the $V_{DD}$ starts falling below 10% to restart the Windows.
$T_5$	The changing time, during which the signal of BLU starts rising beyond 50%.
$T_6$	The changing time, during which the signal of BLU starts falling below 50%.

- The inputted  $V_{DD}$ 's value for supply voltage, BLU, and signal to the external system of the module shall be computed with referring to the former mentioned value.
- The method to apply the voltage to the lamp within the range, which the LCD operates. When the back-light is turned on before the LCD is operated or the power of LCD is turned off before the back-light is turned off, the abnormal display on the screen may be shown momentarily.
- Please keep the level of input signal low or keep the level of impedance high when the value of  $V_{DD}$  is below 10%.
- The value shall be measured after the module has been fully discharged between the period, which the power is turned on and the period, which the power is turned off like the  $T_4$  timing. The backlight may be flashed if the interface signal remains floated when the above-mentioned signal becomes invalid.

## 11. GENERAL PRECAUTIONS

### 11.1 HANDLING

- (a) When the module is assembled, It should be attached to the system firmly using every mounting holes. Be careful not to twist and bend the modules.
- (b) Refrain from strong mechanical shock and / or any force to the module. In addition to damage, this may cause improper operation or damage to the module and CCFT back-light.
- (c) Note that polarizers are very fragile and could be easily damaged. Do not press or scratch the surface harder than a HB pencil lead.
- (d) Wipe off water droplets or oil immediately. If you leave the droplets for a long time, Staining and discoloration may occur.
- (e) If the surface of the polarizer is dirty, clean it using some absorbent cotton or soft cloth.
- (f) The desirable cleaners are water, IPA (Isopropyl Alcohol) or Hexane. Do not use Ketone type materials (ex. Acetone), Ethyl alcohol, Toluene, Ethyl acid or Methyl chloride. It might permanent damage to the polarizer due to chemical reaction.
- (g) If the liquid crystal material leaks from the panel, it should be kept away from the eyes or mouth. In case of contact with hands, legs or clothes, it must be washed away thoroughly with soap.
- (h) Protect the module from static. it may cause damage to the C-MOS Gate Array IC.
- (i) Use fingerstalls with soft gloves in order to keep display clean during the incoming inspection and assembly process.
- (j) Do not disassemble the module.
- (k) Do not pull or fold the Lamp wire.
- (l) Do not touch any component which is located on the back side.
- (m) Protection film for polarizer on the module shall be slowly peeled off just before use so that the electrostatic charge can be minimized.
- (n) Pins of I/F connector shall not be touched directly with bare hands.

**11.2 STORAGE**

We highly recommend to comply with the criteria in the table below.

ITEM	Unit	Min.	Max.
Storage Temperature	(°C)	5	40
Storage Humidity	(%rH)	35	75
Storage Life	12 months		
Storage Condition	<ul style="list-style-type: none"> <li>- The storage room should be equipped with a good ventilation facility, which has a temperature controlling system.</li> <li>- Products should be placed on the pallet, which is away from the wall not on the floor.</li> <li>- Prevent products from being exposed to the direct sunlight, moisture, and water. Be cautious not to pile the products up.</li> <li>- Avoid storing products in the environment, which other hazardous material is placed.</li> <li>- If products are delivered or kept in the storage facility more than 3 months, we recommend you to leave products under the condition including a 20°C temperature and a humidity of 50% for 24 hours.</li> <li>- If you store semi-manufactured products for more than 3 months, bake the products under the condition including the 50°C temp. and the 10% humidity for 24hrs after being used.</li> </ul>		

**11.3 OPERATION**

- (a) Do not connect or disconnect the cable to/ from the module at the "Power On" condition.
- (b) The power shall be always turned on/off by the item 6.5. "Power on/off sequence"
- (c) The module has a circuit with a high frequency. The system manufacturers shall suppress the electromagnetic interference sufficiently. The methods to ground and shield are important to minimize the interference.
- (d) Design the length of cable to connect between the connector for back-light and the inverter as short as possible and the shorter cable shall be connected directly.  
The longer cable between that of back-light and that of inverter may cause the luminance of lamp(CCFL) to lower and need a higher startup voltage(Vs).

**11.4 OPERATION CONDITION GUIDE**

- (a) The LCD product should be operated under normal conditions.  
Normal condition is defined as below;
  - Temperature : 20±15°C
  - Humidity : 55±20%
  - Display pattern : continually changing pattern (Not stationary)
- (b) If the product will be used in extreme conditions such as high temperature, humidity, display patterns or operation time etc., It is strongly recommended to contact SDC for Application engineering advice.  
Otherwise, its reliability and function may not be guaranteed. Extreme conditions are commonly found at Airports, Transit Stations, Banks, Stock market, and Controlling systems.

**11.5 OTHERS**

- (a) Ultra-violet ray filter is necessary for outdoor operation.
- (b) Module should be turned clockwise (regular front view perspective) when used in portrait mode.
- (c) Avoid condensation of water. It may result in improper operation or disconnection of electrode.
- (d) Do not exceed the absolute maximum rating value. (supply voltage variation, input voltage variation, variation in part contents and environmental temperature, and so on) Otherwise the Module may be damaged.
- (e) If the Module keeps displaying the same pattern for a long period of time, the image may be "sticked" to the screen. To avoid image sticking, it is recommended to use a screen saver.
- (f) This Module has its circuitry PCB's on the rear side and should be handled carefully in order not to be stressed.
- (g) Please contact SDC in advance when you display the same pattern for a long time.
