1. Application

This technical literature applies to the color 52.0" TFT-LCD module LK520D3LZ19.

- * These technical literature sheets are proprietary products of SHARP CORPORATION ("SHARP") and include materials protected under copyright of SHARP. Do not reproduce or cause any third party to reproduce them in any form or by any means, electronic or mechanical, for any purpose, in whole or in part, without the express written permission of SHARP.
- * In case of using the device for applications such as control and safety equipment for transportation (aircraft, trains, automobiles, etc.), rescue and security equipment and various safety related equipment which require higher reliability and safety, take into consideration that appropriate measures such as fail-safe functions and redundant system design should be taken.
- * Do not use the device for equipment that requires an extreme level of reliability, such as aerospace applications, telecommunication equipment (trunk lines), nuclear power control equipment and medical or other equipment for life support.
- * SHARP assumes no responsibility for any damage resulting from the use of the device that does not comply with the instructions and the precautions specified in these specification sheets.
- * Contact and consult with a SHARP sales representative for any questions about this device.

2. Overview

This module is a color active matrix LCD module incorporating amorphous silicon TFT (Thin Film Transistor). It is composed of a color TFT-LCD panel, driver ICs, control circuit, power supply circuit, inverter circuit and back light system etc. Graphics and texts can be displayed on a $1920 \times \text{RGB} \times 1080$ dots panel with 16,777,216 colors by using LVDS (Low Voltage Differential Signaling) to interface, +12V of DC supply voltages.

This module also includes the DC/AC inverter to drive the CCFT. (+24V of DC supply voltage)

And in order to improve the response time of LCD, this module applies the Over Shoot driving (O/S driving) technology for the control circuit. In the O/S driving technology, signals are being applied to the Liquid Crystal according to a pre-fixed process as an image signal of the present frame when a difference is found between image signal of the previous frame and that of the current frame after comparing them.

By using this captioned processes, the image signals of this LCD module are being set so that image response can be completed within one frame, as a result, image blur can be more improved and clear image performance can be realized.

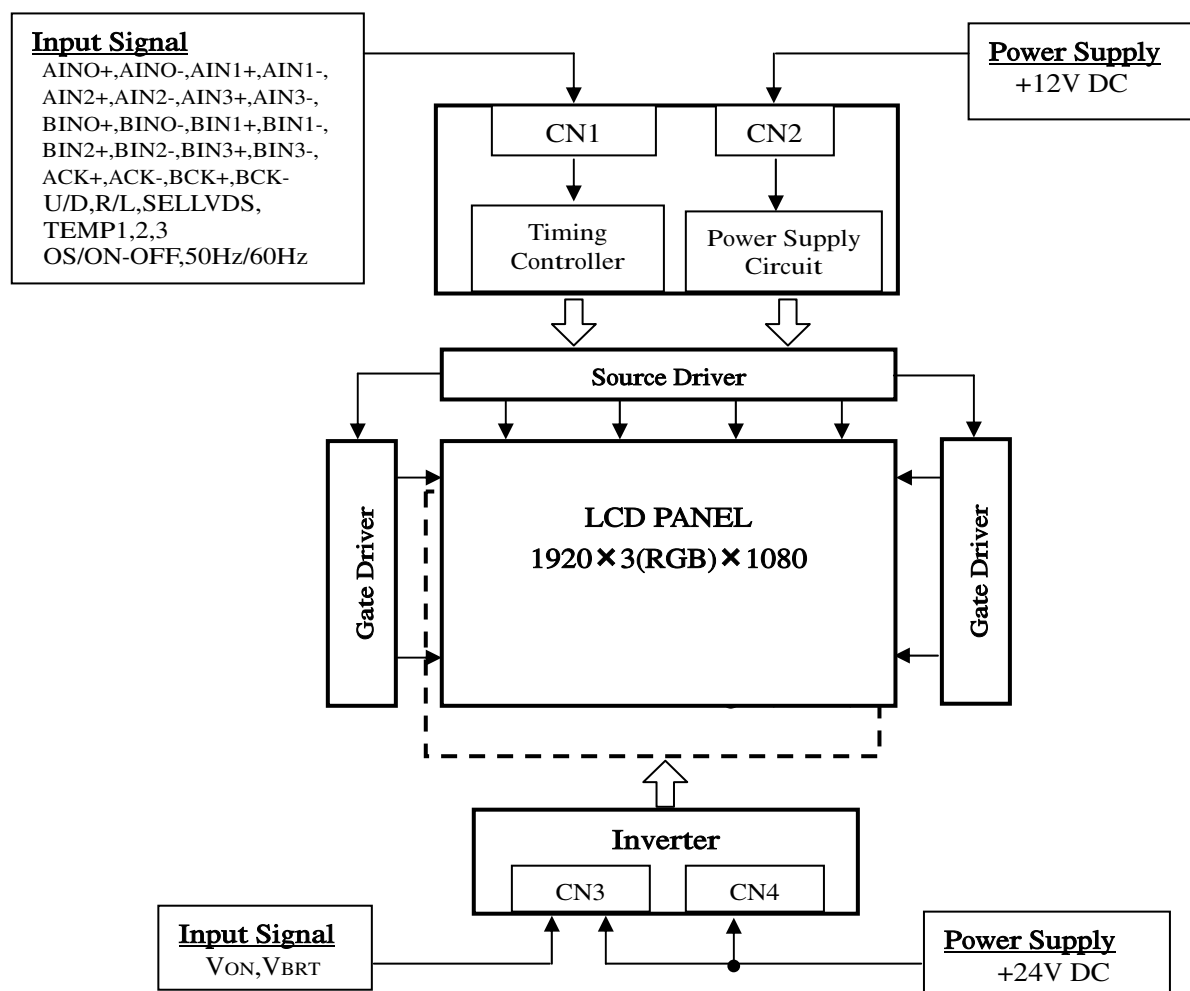

3. Mechanical Specifications

Parameter	Specifications	Unit
Display size	132.174 (Diagonal)	cm
	52.0 (Diagonal)	inch
Active area	1152.0(H) x 648.0(V)	mm
Pixel Format	1920(H) x 1080(V) (1pixel = R + G + B dot)	pixel
Pixel pitch	0.600(H) x 0.600(V)	mm
Pixel configuration	R, G, B vertical stripe	
Display mode	Normally black	
Unit Outline Dimensions (*1)	1219.0(W) x 706.7(H) x (63.0)(D)	mm
Mass	(19.0) \pm 1.0	kg
Surface treatment	Anti glare, low reflection coating Hard coating: 2H	

(*1) Outline dimensions are shown in Fig.1

TEMP1	Data1 of panel surface temperature	Pull up 10k Ω : (3.3V) (*)

(*) In case of OS/ON-OFF setting "0"(OS OFF), it should be set the TEMP1~3 to "0".

Measuring the correlation between detected temperature by the sensor on PWB in users side and actual surface temperature of panel at center, convert the temperature detected by the sensor to the surface temperature of panel to enter the 3 bit temperature data.

For overlapping temperatures (such as 5°C, 10°C, 15°C, 20°C, 25°C, 30°C, 35°C) select the optimum parameter, judging from the actual picture image.

Pin no.	Surface temperature of panel (assembled to the set)							
	0-5°C	5-10°C	10-15°C	15-20°C	20-25°C	25-30°C	30-35°C	35°C and above

*GND of an inverter board is not connected to GND of a module chassis and a liquid crystal panel drive part.

【Note 1】 Inverter ON/OFF

Pin No.12 is used for the control of the Inverter ON / OFF.

Input voltage	Function
3.3V	Inverter : ON
0V	Inverter : OFF

【Note 2】 Brightness control

PWM brightness control is regulated by analog input voltage (0V to 3.3V)..

Input voltage	Function
3.3V	Brightness Maximum (Bright)
0V	Brightness Minimum (Dark)

4-4. The back light system characteristics

The back light system is direct type with 24 CCFTs (Cold Cathode Fluorescent Tube).

The characteristics of the lamp are shown in the following table.

The value mentioned below is at the case of one CCFT.

Item	Symbol	Min.	Typ.	Max.	Unit	Remarks
Life time	T _L	-	(60000)	-	Hour	[Note]

[Note] • Lamp life time is defined as the time when brightness becomes 50% of the original value in the continuous operation under the condition of Ta=25°C.

• Above value is applicable when the long side of LCD module is placed horizontally (Landscape position).

5. Absolute Maximum Ratings

Parameter	Symbol	Condition	Ratings	Unit	Remark
Input voltage (for Control)	V _I	Ta=25 °C	-0.3 ~ 3.6	V	[Note 1]
12V supply voltage (for Control)	VCC	Ta=25 °C	0 ~ +14	V	
Input voltage (for Inverter)	V _{BRT} V _{ON}	Ta=25 °C	0 ~ +6	V	
24V supply voltage (for Inverter)	V _{INV}	Ta=25 °C	0 ~ +29	V	
Storage temperature	T _{stg}	-	-25 ~ +60	°C	[Note 2]
Operation temperature (Ambient)	T _{opa}	-	0 ~ +50	°C	

[Note 1] SELVDS, R/L, U/D, 50Hz/60Hz, OS/ON-OFF, TEMP3,2,1

[Note 2] Humidity 95%RH Max.(Ta ≤ 40°C)

Maximum wet-bulb temperature at 39 °C or less.(Ta > 40 °C)

No condensation.

6. Electrical Characteristics

6-1. Control circuit driving

Ta=25 °C

Parameter		Symbol	Min.	Typ.	Max.	Unit	Remark
+12V supply voltage	Supply voltage	V _{CC}	11.4	12.0	12.6	V	[Note 1]
	Current	I _{CC}	-	(1.05)	(TBD)	A	[Note 2]
Permissible input ripple voltage		V _{RP}	-	-	100	mV _{P-P}	V _{CC} = +12.0V
Differential input threshold voltage	High	V _{TH}	-	-	100	mV	V _{CM} = +1.2V [Note 6]
	Low	V _{TL}	-100	-	-	mV	
Input Low voltage		V _{IL}	-	-	0.8	V	[Note 3]
Input High voltage		V _{IH}	2.0	-	3.3	V	
Input leak current (Low)		I _{IL}	-	-	400	μA	V _I = 0V [Note 4]
Input leak current (High)		I _{IH}	-	-	400	μA	V _I = 3.3V [Note 5]
Terminal resistor		R _T	-	100	-	Ω	Differential input

[Note] V_{CM}: Common mode voltage of LVDS driver.

[Note 1]

Input voltage sequences

$$0 < t_1 \leq 10\text{ms}$$

$$10\text{ms} < t_2 \leq 20\text{ms}$$

$$10\text{ms} < t_3 \leq 1\text{s}$$

$$0 < t_4 \leq 1\text{ms}$$

$$t_5 \geq 500\text{ms}$$

$$t_6 \geq 0$$

$$t_7 \geq 500\text{ms}$$

*Please input data signals after clock confirmed.

Dip conditions for supply voltage

$$\text{a) } 6.5\text{V} \leq V_{\text{CC}} < 10.8\text{V}$$

$$t_d \leq 10\text{ms}$$

$$\text{b) } V_{\text{CC}} < 6.5\text{V}$$

Dip conditions for supply voltage is based on input voltage sequence.

V1:10.8V
V2:6.5V

※ Data1: ACK \pm , BCK \pm , AIN0 \pm , AIN1 \pm , AIN2 \pm , AIN3 \pm , BIN0 \pm , BIN1 \pm , BIN2 \pm , BIN3 \pm

※ Data2: SELLVDS, R/L, U/D

About the relation between data input and back light lighting, please base on the above-mentioned input sequence. When backlight is switched on before panel operation or after a panel operation stop, it may not display normally. But this phenomenon is not based on change of an incoming signal, and does not give damage to a liquid crystal display.

[Note 2] Maximum current situation: white (RGB GSS255)

Typical current situation: 256 gray-bar pattern

The explanation of RGB gray scale is seen in section 8.

V_{CC} = 12.0V
CK = 74.25MHz
Th = 14.8 μ s

Chromaticity	White	W _x	$\theta = 0$ deg.	(TBD)	(0.272)	(TBD)	-	[Note 4] $V_{BRI}=3.3V$
		W _y		(TBD)	(0.277)	(TBD)	-	
	Red	R _x	$\theta = 0$ deg.	(TBD)	(TBD)	(TBD)	-	
		R _y		(TBD)	(TBD)	(TBD)	-	
	Green	G _x	$\theta = 0$ deg.	(TBD)	(TBD)	(TBD)	-	
		G _y		(TBD)	(TBD)	(TBD)	-	
	Blue	B _x	$\theta = 0$ deg.	(TBD)	(TBD)	(TBD)	-	
		B _y		(TBD)	(TBD)	(TBD)	-	
Luminance of white		Y _L	$\theta = 0$ deg.	(360)	(450)		cd/m ²	[Note 4] $V_{BRI}=3.3V$
Luminance uniformity		δ w	$\theta = 0$ deg.	-	-	(1.25)		[Note 6]

Measurement condition : Set the value of VBRT to maximum luminance of white.

*The measurement shall be executed 60 minutes after lighting at rating.

【Note】 The optical characteristics are measured using the following equipment.

Fig.3-1 Measurement of viewing angle range and Response time.

Viewing angle range: EZ-CONTRAST

Response time: Photodiode

Fig.3-2 Measurement of Contrast, Luminance, Chromaticity.

[Note 1]Definitions of viewing angle range :

[Note 2]Definition of contrast ratio :

The contrast ratio is defined as the following.

Contrast Ratio=
$$\frac{\text{Luminance (brightness) with all pixels white}}{\text{Luminance (brightness) with all pixels black}}$$

[Note 3]Definition of response time

The response time (τ_d and τ_r) is defined as the following figure and shall be measured by switching the input signal for “any level of gray (0%, 25%, 50%, 75% and 100%)” and “any level of gray (0%, 25%, 50%, 75% and 100%)”.

	0%	25%	50%	75%	100%
0%		tr:0%-25%	tr:0%-50%	tr:0%-75%	tr:0%-100%
25%	td: 25%-0%		tr: 25%-50%	tr25%-75%	tr: 25%-100%
50%	td: 50%-0%	td: 50%-25%		tr: 50%-75%	tr: 50%-100%
75%	td: 75%-0%	td: 75%-25%	td: 75%-50%		tr: 75%-100%
100%	td: 100%-0%	td: 100%-25%	td: 100%-50%	td:10 0%-75%	

t*:x-y...response time from level of gray(x) to level of gray(y)

$\tau_r = \Sigma(tr:x-y)/10$, $\tau_d = \Sigma(td:x-y)/10$

[Note 4] This shall be measured at center of the screen.

[Note 5] This value is valid when O/S driving is used at typical input time value.

[Note 6] Definition of white uniformity ;

White uniformity is defined as the following with five measurements. (A~E)

$$\delta_w = \frac{\text{Maximum luminance of five points (brightness)}}{\text{Minimum luminance of five points (brightness)}}$$

10. Handling Precautions of the module

- Be sure to turn off the power supply when inserting or disconnecting the cable.
- This product is using the parts (inverter, CCFT etc), which generate the high voltage. Therefore, during operating, please don't touch these parts.
- Brightness control voltage is switched for "ON" and "OFF", as shown in Fig.4. Voltage difference generated by this switching, ΔV_{INV} , may affect a sound output, etc. when the power supply is shared between the inverter and its surrounding circuit. So, separate the power supply of the inverter circuit with the one of its surrounding circuit.

Fig.4 Brightness control voltage.

*Since inverter board's GND is not connected to the frame of the LCD module, please connect it with the Customer's GND of inverter power supply.

- Be sure to design the cabinet so that the module can be installed without any extra stress such as warp or twist.
- Since the front polarizer is easily damaged, pay attention not to scratch it.
- Since long contact with water may cause discoloration or spots, wipe off water drop immediately.
- When the panel surface is soiled, wipe it with absorbent cotton or other soft cloth.
- Since the panel is made of glass, it may break or crack if dropped or bumped on hard surface. Handle with care.
- Since CMOS LSI is used in this module, take care of static electricity and take the human earth into consideration when handling.
- Please consider to minimize the influence of EMI and the exogenous noise before designing the grounding of LCD module.

- k) The module has some printed circuit boards (PCBs) and lamp cables on the back side, take care to keep them from any stress or pressure when handling or installing the module; otherwise some of electronic parts on the PCBs may be damaged.
- l) Observe all other precautionary requirements in handling components.
- m) When some pressure is added onto the module from rear side constantly, it causes display non-uniformity issue, functional defect, etc.. So, please avoid such design.
- n) When handling LCD modules and assembling them into cabinets, please be noted that long-term storage in the environment of oxidization or deoxidization gas and the use of such materials as reagent, solvent, adhesive, resin, etc. which generate these gasses, may cause corrosion and discoloration of the LCD modules.
- o) Lamps of the backlight are placed horizontally to the long side of LCD module. So make sure that the LCD module are placed horizontally (landscape position), as lifetime of backlight becomes shorter if placed at a tilt.
- p) Make sure that the LCD module is operated within specified temperature and humidity.
Measures against dust, water, vibration, and heat radiation, etc. are required at the cabinet or equipment side.
And image retention may occur if same fixed pattern is displayed for a long time. In some cases, it may not disappear.
Please consider the design and operating environment.

11. Packing form

- a) Piling number of cartons : TBD
- b) Packing quantity in one carton : TBD
- c) Carton size : TBD
- d) Total mass of one carton filled with full modules : TBD

12. Reliability test item

No.	Test item	Condition	
1	High temperature storage test	Ta=60°C 240h	
2	Low temperature storage test	Ta=-25°C 240h	
3	High temperature and high humidity operation test	Ta=40°C ; 95%RH 240h (No condensation)	
4	High temperature operation test	Ta=50°C 240h (Panel surface temperature is below 60°C)	
5	Low temperature operation test	Ta=0°C 240h	
6	Vibration test (non-operation)	Frequency: 10~57Hz/Vibration width (one side): 0.075mm : 58~500Hz/Acceleration: 9.8 m/ s ² Sweep time: 11 minutes Test period: 3 hours (1h for each direction of X, Y, Z)	【Note】
7	Shock test (non-operation)	Maximum acceleration: 490m/s ² Pulse width: 11ms, sinusoidal half wave Direction: ±X, ±Y, ±Z, once for each direction.	【Note】
8	ESD	* At the following conditions, it is a thing without incorrect operation and destruction. (1)Non-operation: Contact electric discharge ±10kV Non-contact electric discharge ±20kV (2)Operation: Contact electric discharge ±8kV Non-contact electric discharge ±15kV Conditions: 150pF、330ohm	

【Note】 LCD panel misalignment is within tolerance levels after vibration and shock tests.

LCD module is supposed to be installed at the right position mentioned in the outline dimensions during vibration and shock tests.

【Result evaluation criteria】

Under the display quality test condition with normal operation state, there shall be no change, which may affect practical display function.

13. Others

- 1) Lot No. Label ;
TBD
- 2) Packing Label
TBD
- 3) Adjusting volume have been set optimally before shipment, so do not change any adjusted value.
If adjusted value is changed, the specification may not be satisfied.
- 4) Disassembling the module can cause permanent damage and should be strictly avoided.
- 5) Please be careful since image retention may occur when a fixed pattern is displayed for a long time.
- 6) Cold cathode fluorescent lamp in LCD PANEL contains a small amount of mercury. Please follow local ordinances or regulations for disposal. This sentence is displayed on the backside of the module.

COLD CATHODE FLUORESCENT LAMP IN LCD PANEL
CONTAINS A SMALL AMOUNT OF MERCURY, PLEASE FOLLOW
LOCAL ORDINANCES OR REGULATION FOR DISPOSAL
当該液晶ディスプレイパネルは蛍光管が組み込まれていますので、地方自治体の条例、または、規則に従って廃棄ください。

- 7) Lead-free soldering is applied.
- 8) The chemical compound, which causes the destruction of ozone layer, is not being used.
- 9) Appearance quality and standard are referred to the outgoing incoming inspections.

14. Carton storage condition

Temperature	0°C to 40°C
Humidity	95%RH or less
Reference condition	: 20°C to 35°C , 85%RH or less (summer) : 5°C to 15°C , 85%RH or less (winter) • the total storage time (40°C,95%RH) : 240H or less
Sunlight	Be sure to shelter a product from the direct sunlight.
Atmosphere	Harmful gas, such as acid and alkali which bites electronic components and/or wires must not be detected.
Notes	Be sure to put cartons on palette or base, don't put it on floor, and store them with removing from wall Please take care of ventilation in storehouse and around cartons, and control changing temperature is within limits of natural environment
Storage life	1 year

SPECIFICATIONS ARE SUBJECT TO CHANGE WITHOUT NOTICE.
