Express written permission is also required before any use of this publication may be made by a third party.

The application circuit examples in this publication are provided to explain the representative applications of SHARP's devices and are not intended to guarantee any circuit design or permit any industrial property right or other rights to be executed. SHARP takes no responsibility for any problems related to any industrial property right or a third party resulting from the use of SHARP's devices, except for those resulting directly from device manufacturing processes.

In the absence of confirmation by device specification sheets, SHARP takes no responsibility for any defects that occur in equipment using any of SHARP's devices, shown in catalogs, data books, etc. Contact SHARP in order to obtain the latest device specification sheets before using any SHARP's device.

SHARP reserves the right to make changes in the specifications, characteristics, data, materials, structures and other contents described herein at any time without notice in order to improve design or reliability. Contact SHARP in order to obtain the latest specification sheets before using any SHARP's device. Manufacturing locations are also subject to change without notice.

Observe the following points when using any device in this publication. SHARP takes no responsibility for damage caused by improper use of the devices.

The devices in this publication are designed for use in general electronic equipment designs, such as:

- Personal computers • Office automation • Telecommunication equipment
- Test and measurement equipment • Industrial control • Personal Digital Assistant
- Audio visual and multimedia equipment • Consumer electronics

The appropriate design measures should be taken to ensure reliability and safety when SHARP's devices are used for equipment such as:

- Transportation control and safety equipment(i.e. aircraft, trains, automobiles, etc.)
- Traffic signals • Gas leakage sensor breakers
- Alarm equipment • Various safety devices etc.

SHARP's devices shall not be used for equipment that requires extremely high level of reliability, such as:

- Military and space applications • Nuclear power control equipment
- Medical equipment for life support

Contact a SHARP representative, in advance, when intending to use SHARP's devices for any "specific" applications other than those recommended by SHARP.

Contact and consult with a SHARP representative if there are any questions about the contents of this publication.

1. Applicable Scope

This specification is applicable to TFT-LCD Module “LQ025Q3DW02”.

2. General Description

This module is a color active matrix LCD module incorporating amorphous silicon TFT (Thin Film Transistor).

It is composed of a color TFT-LCD panel, driver IC, Input FPC, a back light unit.

Graphics and texts can be displayed on a 320 × RGB × 240 dots panel with about 262k colors by supplying 18bit data signals (6bit × RGB), four timing signals, 3wires 9bit serial interface signals, logic (Typ. +3.3V), analog (Typ. +3.3V) supply voltages for TFT-LCD panel driving and supply voltage for back light.

Note : When entered to 8-color display mode, the RGB graphic data through the interface pin RR5, GG5 and BB5 are valid within the Vertical Active Area. Data "0" will be displayed the Vertical Active Area.

7-4. V_{GH} Output against SHUT & RESB **V_{GH} Output against SHUT & RESB**

- Note1: The minimum cycle time of SHUT is $10 + 2$ frames.
- Note2: DOTCLK must be provided for boosting of V_{GH} . The above timing diagram assumed voltages and DOTCLK are continuous supplied after power on.
- Note3: V_{GH} will be forced to V_{CI} at the low stage of RESB.
- Note4: The minimum pulse width of RESET is $10us$.

7-5. Power Up Sequence

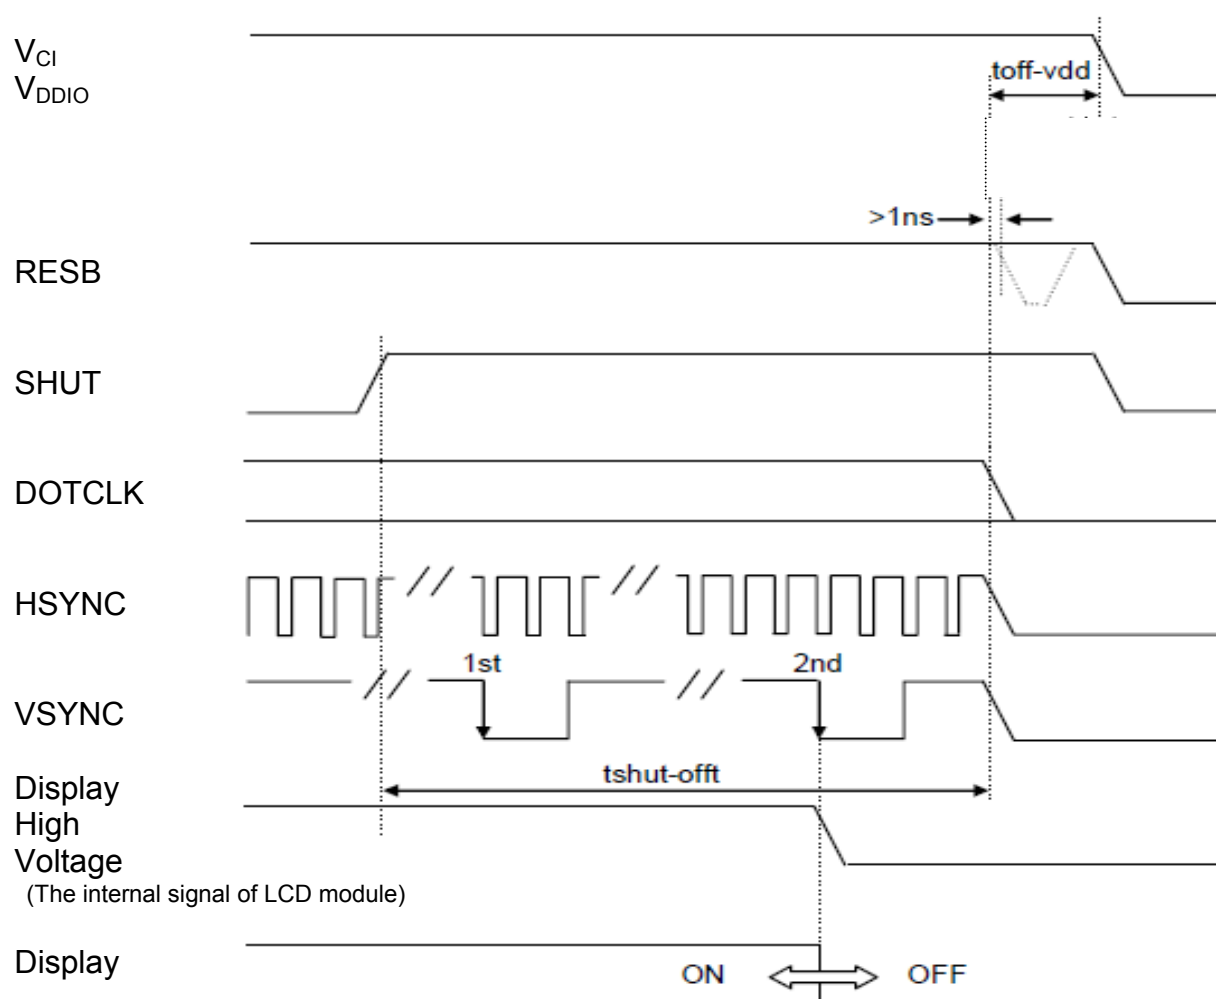

Characteristics	Symbol	Min	Typ	Max	Units
$V_{\text{DDEXT}} / V_{\text{DDIO}}$ on to falling edge of SHUT	$t_{\text{p-shut}}$	1	-	-	μsec

-- 1 line: 336 clk		-	164	-	msec
-- 1 frame: 244 line		-	164	-	msec
-- DOTCLK = 5.0MHz					

Note1: It is necessary to input DOTCLK before the falling edge of SHUT.

Note2: Display starts at 10th falling edge of VSYNC after the falling edge of SHUT.

7-6. Power Down Sequence

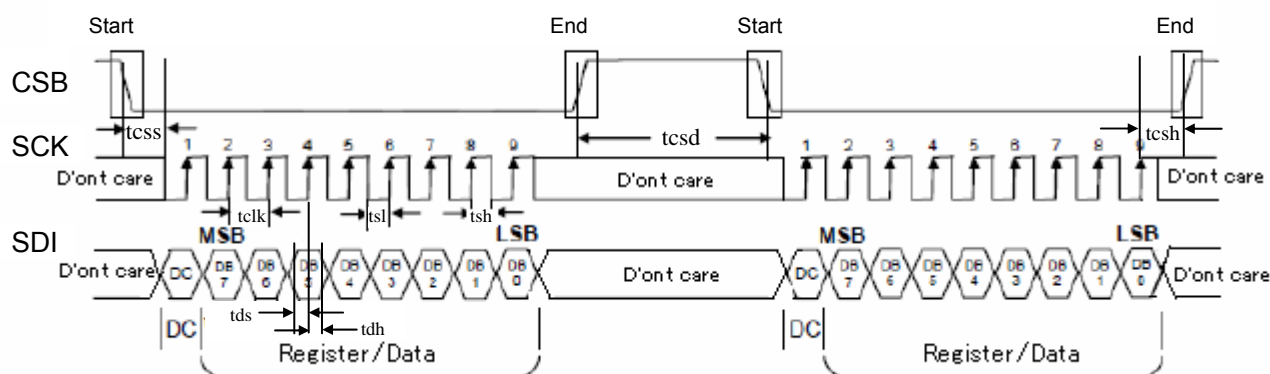

Characteristics	Symbol	Min	Typ	Max	Units
Rising edge of SHUT to display off	tshut-off	2	-	-	frame
-- 1 line: 336 clk		32.8	-	-	msec
-- 1 frame: 244 line					
-- DOTCLK = 5.0 MHz					
Input-signal-off to V _{DDEX} T / V _{DDIO} off	toff-vdd	1	-	-	μsec

Note1: DOTCLK must be maintained at least 2 frames after the rising edge of SHUT.

Note2: Display become off at the 2nd falling of VSYNC after the falling edge of SHUT.

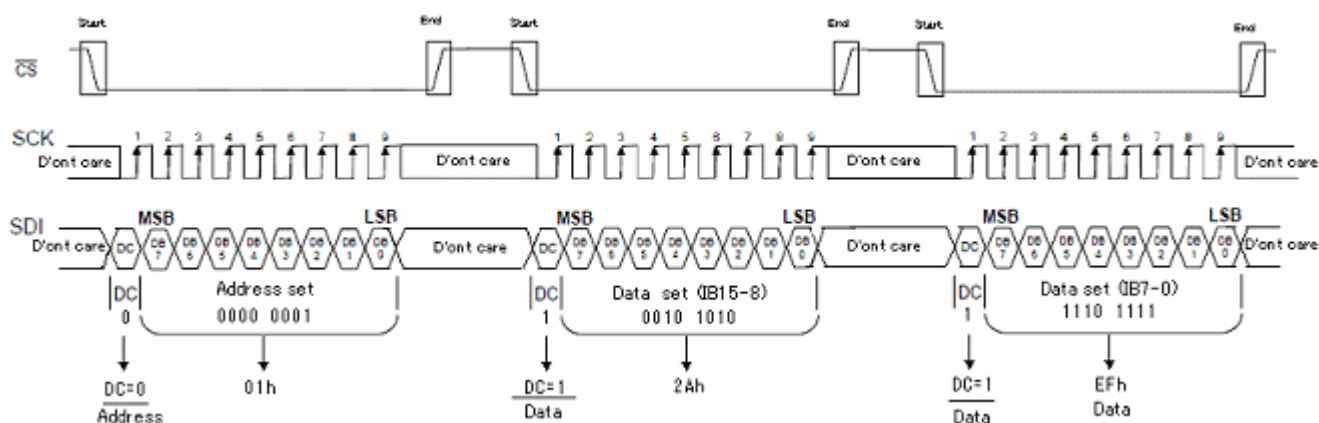

Note3: IF RESET(RESB) signal is necessary for power down, provide it after the 2-frames-cycle of the SHUT period.

7-7. SPI Interface Timing Diagram & Transaction Example (9 bit)

* The optical characteristics measurements are operated under a stable luminescence (I_{LED} = 20mA) and a dark condition. (Refer to Fig.9-1 and Fig.9-2)

Fig.9-1 Measuring setup for
Viewing angle and Response time

Fig.9-2 Measuring setup for
Luminance, Chromaticity and Contrast ratio

【 Note 1 】 Definitions of viewing angle range

【 Note 2 】 Definition of contrast ratio

The contrast ratio is defined as the following

$$\text{Contrast ratio (CR)} = \frac{\text{Luminance (brightness) with all pixels white}}{\text{Luminance (brightness) with all pixels black}}$$

【 Note 3 】 Definition of response time

The response time is defined as the following figure and shall be measured by switching the input signal for “Black” and “White”

【 Note 4 】 This shall be measured at center of the screen.

10 Handling of modules

10-1. Inserting the FPC into its connector and pulling it out

- 1) Be sure to turn off the power supply and the signals when inserting or disconnecting the cable.
- 2) Please insert for too much stress not to join FPC in the case of insertion of FPC.

10-2. About handling of FPC

- 1) The bending radius of the FPC should be more than 1.4mm, and it should be bent evenly.
- 2) Do not dangle the LCD module by holding the FPC, or do not give any stress to it.

10-3. Mounting of the module

- 1) The module should be held on to the plain surface. Do not give any warping or twisting stress to the module.
- 2) Please consider that GND can ground a modular metal portion etc. so that static electricity is not charged to a module.

10-4. Cautions in assembly / Handling pre cautions

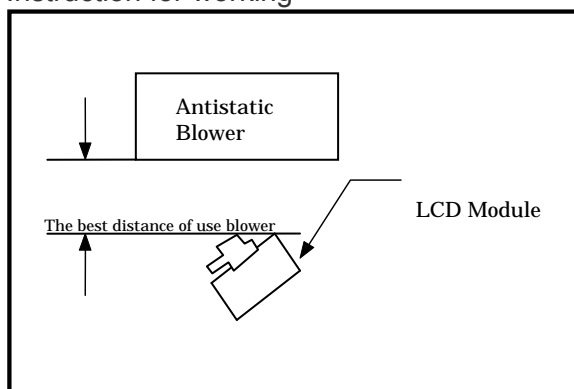

As the polarizer can be easily scratched, be most careful in handling it.

1) Work environments in assembly.

Since removing laminator may causes electrostatic charge that tends to attract dust, the following work environment would be desired.

- a) Floor: Conductive treatment having 1MΩ resistance onto floor's tile
- b) The room free from dust coming from outdoor environment, and put an adhesive mat at entrances.
- c) Humidity from 50% to 70% and temperature from 15°C to 27°C are desirable.
- d) Worker should ware conductive shoes, conductive fatigue, conductive glove and earth wrist band.

2) Instruction for working

- a) Wind direction of an antistatic blower should slightly downward to properly blow the module. The distance between the blower and the module should be the best distance of use blower. Also, pay attention to the direction of the module.
- b) To prevent polarizer from scratching, adhesive tape (cellophane tape) should be stuck at the part of laminator sheet, which is closed to blower. [See the above]
- c) Pull slowly adhesive tape to peel the laminator off, with spending more than 5 second.
- d) The module without laminator should be moved to the next process to prevent adhesion of dust.

3) How to remove dust on the polarizer

- a) Blow out dust by the use of an N2 blower with antistatic measures taken. Use of an ionized air Gun is recommendable.
- b) When the panel surface is soiled, wipe it with soft cloth.

4) In the case of the module's metal part (shield case) is stained, wipe it with a piece of dry, soft cloth.

If rather difficult, give a breath on the metal part to clean better.

5) If water dropped, etc. remains stuck on the polarizer for a long time, it is apt to get discolored or cause stains. Wipe it immediately.

6) As a glass substrate is used for the TFT-LCD panel, if it is dropped on the floor or hit by something hard, it may be broken or chipped off.

7) Since CMOS LSI is used in this module, take care of static electricity and take the human earth into consideration when handling.

10-5. Others

- 1) Regarding storage of LCD modules, avoid storing them at direct sunlight-situation.
- 2) If stored at temperatures below the rated values, the inner liquid crystal may freeze, causing cell destruction. At temperatures exceeding the rated values for storage, the liquid crystal may become isotropic liquid, making it no longer possible to come back to its original state in some cases.
- 3) If the LCD is broken, do not drink liquid crystal in the mouth. If the liquid crystal adheres to a hand or foot or to clothes, immediately cleanse it with soap.
- 4) If a water drop or dust adheres to the polarizer, it is apt to cause deterioration. Wipe it immediately.
- 5) Be sure to observe other caution items for ordinary electronic parts and components.

11. Reliability test items

No.	Test item	Conditions
1	High temperature storage test	Leaves the module at Ta=+70°C for 240h
2	Low temperature storage test	Leaves the module at Ta=-25°C for 240h
3	High temperature & high humidity operation test	Operates the module at Ta=+40°C; 95%RH for 240h (No condensation)
4	High temperature operation test	Operates the module with +60°C at panel surface for 240h
5	Low temperature operation test	Operates the module at Ta=-10°C for 240h
6	Vibration test (non- operating)	Frequency range: 10 to 55Hz Stroke: 1.5mm Sweep time: 1minutes Test period: 2 hours for each direction of X,Y,Z
7	Shock test	Direction: $\pm X$, $\pm Y$, $\pm Z$, Time: Third for each direction. Impact value: 980m/s ² , Action time 6ms
8	Thermal shock test	Ta=-10°C to 70°C /10 cycles (30 min) (30min)

【Note】 Ta = Ambient temperature, Tp = Panel temperature

【Check items】

In the standard condition, there shall be no practical problems that may affect the display function.

12. Display Grade

The standard regarding the grade of color LCD displaying modules should be based on the delivery inspection standard.

13. Delivery Form

1) Carton piling-up: Max 8 rows

2) Environments

Temperature: 0 ~ 40°C

Humidity: 65% RH or less (at 40°C)

There should be no dew condensation even at a low temperature and high humidity.

3) Packing form: 15. LCD module packing carton

Cartons are weak against damp, and they are apt to be smashed easily due to the compressive pressure applied when piled up. The above environmental conditions of temperature and humidity are set in consideration of reasonable pile-up for storage.

14. Lot No. marking

The lot No. will be indicated on individual inkjet. The location is as shown

15. LCD module packing carton

16. Others

- 1 Disassembling the module can cause permanent damage and you should be strictly avoided.
- 2 Please be careful that you don't keep the screen displayed fixed pattern image for a long time, since retention may occur.
- 3 If you pressed down a liquid crystal display screen with your finger and so on, the alignment disorder of liquid crystal will occur. And then It will become display fault.
Therefore, be careful not to touch the screen directly, and to consider not stressing to it.
- 4 If any problem arises regarding the items mentioned in this specification sheet or otherwise, it should be discussed and settled mutually in a good faith for remedy and/or improvement.
