## NOTICE

* "SHARP" includes the meaning of Wuxi Sharp Electronic Components Co., Ltd.

This publication is the proprietary of SHARP and is copyrighted, with all rights reserved. Under the copyright laws, no part of this publication may be reproduced or transmitted in any form or by any means, electronic or mechanical for any purpose, in whole or in part, without the express written permission of SHARP. Express written permission is also required before any use of this publication may be made by a third party.

The application circuit examples in this publication are provided to explain the representative applications of SHARP devices and are not intended to guarantee any circuit design or permit any industrial property right or other rights to be executed. SHARP takes no responsibility for any problems related to any industrial property right or a third party resulting from the use of SHARP devices, except for those resulting directly from device manufacturing processes.

In the absence of confirmation by device specification sheets, SHARP takes no responsibility for any defects that occur in equipment using any of SHARP devices, shown in catalogs, data books, etc. Contact to WUXI SHARP in order to obtain the latest device specification sheets before using any WUXI SHARP devices.

SHARP reserves the right to make changes in the specifications, characteristics, data, materials, structures and other contents described herein at any time without notice in order to improve design or reliability. Contact to WUXI SHARP in order to obtain the latest specification sheets before using any WUXI SHARP devices. Manufacturing locations are also subject to change without notice.

Observe the following points when using any device in this publication. SHARP takes no responsibility for damage caused by improper use of the devices.

This device was developed for the China domestic market.
This device may make change of material in the range of specification sheet description for performance improvement etc.. Please understand in advance it. In that case we will contact you in advance.

The devices in this publication are designed for use in general electronic equipment designs, such as:
Consumer electronics / Personal computers / Office automation equipment / Telecommunication
equipment / PDA(Personal digital assistant) / MID(Multimedia information display) / Audio visual
equipment /
The appropriate design measures should be taken to ensure reliability and safety when SHARP's devices are used for equipment, such as:

- Transportation control and safety equipment(i.e., aircraft ,trains, automobiles etc.)
- Traffic signals - Gas leakage sensor breakers - Alarm equipment • Various safety devices etc.

SHARP's devices shall not be used for equipment that requires extremely high level of reliability, such as:

- Military and space applications • Nuclear power control equipment - Medical equipment for life support

Contact to WUXI SHARP representative, in advance, when intending to use WUXI SHARP's devices for any "specific" applications other than those recommended by WUXI SHARP.

Contact and consult with a WUXI SHARP representative if there are any questions about the contents of this publication.

## 1. General

This TFT-LCD module is a color active matrix LCD (Liquid Crystal Display) module of transmissive type incorporating amorphous silicon TFT (Thin Film Iransistor). General specification of the module is shown in the Table 3-1.It is composed of a color TFT-LCD panel, driver IC, FPC, backlight unit.
This TFT-LCD module is controlled by LCD driver IC NT35512. LCD driver IC basic specification refer to the LCD driver IC specification sheet.

## 2. Features

- Utilizes a panel with a $3: 5$ aspect ratio, which makes the module suitable for use in wide screen systems.
- The 3.97 screen produces a high resolution image that is composed of 384,000 pixels elements in a
stripe
arrangement.
- Graphics and texts can be displayed on a $480 \times$ RGB x 800 dots panel with $16,777,216$ colors by supplying 24 bits ( 8 bits $\times$ RGB) data signal.
- Wide viewing field angle technology is employed.
- By adopting an active matrix drive, a picture with high contrast is realized.
- By COG method, realized a slim, lightweight, and compact module.
- Realized a high quality picture of the natural color appearance by adopting Normally Black Mode which is superior to the color appearance.
- 24bit RGB interface.

```

```

## 3. Mechanical specifications

Table 3-1

| Parameter | Specifications | Units | Remarks |
| :--- | :--- | :---: | :---: |
| Display format | $480 \times$ RGB $\times 800$ | pixels |  |
| Active area | $51.84(\mathrm{~W}) \times 86.4(\mathrm{H})$ | mm |  |
| Screen size (Diagonal) | 3.97 | inch |  |
| Dot pitch | $0.108(\mathrm{H}) \times 0.108(\mathrm{~V})$ | mm |  |
| Display mode | Transmissive, Normally black | - |  |
| Pixel configuration | R. G. B. vertical stripe | - |  |
| Viewing angle | Full viewing | - |  |
| Outline dimensions(typ) | $57.14(\mathrm{~W}) \times 96.85(\mathrm{H}) \times 1.85(\mathrm{D})$ | mm | [Note3-1] |
| Mass | $21.3(\mathrm{MAX})$ | g |  |

[Note3-1] Typical values are shown.
For detailed measurements and tolerances, please refer to Fig.1. (FPC, electronic parts are excepted.)

## 4. Input terminal and its function

4-1 TFT-LCD panel driving part
Table 4-1
Recommended connector : FH26-51S-0.3SHW

| Pin No. | Symbol | I/O | Description | Remarks |
| :---: | :---: | :---: | :---: | :---: |
| 1 | LEDK | - | LED backlight cathode(-) |  |
| 2 | LEDA | - | LED backlight anode(+) |  |
| 3 | YU(NC) | - | No connection |  |
| 4 | XR(NC) | - | No connection |  |
| 5 | YD(NC) | - | No connection |  |
| 6 | XL(NC) | - | No connection |  |
| 7 | GND | - | Power ground |  |
| 8 | VCI | - | Power supply to liquid crystal power supply(analog) |  |
| 9 | NC | - | Open |  |
| 10 | IOVCC | - | Power supply to interface pins(logic) |  |
| 11 | TE | 0 | FMARK Signal |  |
| 12 | SDO | 0 | Serial data output pin |  |
| 13 | SDI | I/O | Serial data input bus. |  |
| 14 | SCL | I | Serial clock pin |  |
| 15 | CS | I | Chip select input pin ("Low" enable) |  |
| 16 | RESET | I | Reset the device. Signal is low active |  |
| 17 | DB23 | I/O | Data Bus |  |
| 18 | DB22 | I/O | Data Bus |  |
| 19 | DB21 | I/O | Data Bus |  |
| 20 | DB20 | I/O | Data Bus |  |
| 21 | DB19 | I/O | Data Bus |  |
| 22 | DB18 | I/O | Data Bus |  |
| 23 | DB17 | I/O | Data Bus |  |
| 24 | DB16 | I/O | Data Bus |  |
| 25 | DB15 | I/O | Data Bus |  |
| 26 | DB14 | I/O | Data Bus |  |
| 27 | DB13 | I/O | Data Bus |  |
| 28 | DB12 | I/O | Data Bus |  |
| 29 | DB11 | I/O | Data Bus |  |
| 30 | DB10 | I/O | Data Bus |  |
| 31 | DB09 | I/O | Data Bus |  |
| 32 | DB08 | I/O | Data Bus |  |
| 33 | DB07 | I/O | Data Bus |  |
| 34 | DB06 | I/O | Data Bus |  |
| 35 | DB05 | I/O | Data Bus |  |
| 36 | DB04 | I/O | Data Bus |  |
| 37 | DB03 | I/O | Data Bus |  |
| 38 | DB02 | I/O | Data Bus |  |
| 39 | DB01 | I/O | Data Bus |  |
| 40 | DB00 | I/O | Data Bus |  |
| 41 | ENABLE | I | Data Enable signal |  |
| 42 | DOTCLK | I | Pixel clock signal |  |
| 43 | HSYNC | I | Horizontal Sync signal |  |
| 44 | VSYNC | I | Vertical Sync signal |  |
| 45 | LEDPWM | 0 | It is a PWM type control signal for brightness of the LED backlight. |  |
| 46 | LEDON | 0 | It is a LED driver control signal which is used for turning ON/OFF the LED backlight. |  |

Table 4-1 (sequel)

| Pin No. | Symbol | I/O | Description | Remarks |  |

| 51 | GND | - | Power ground |  |  |

[Note4-1] IM1 / IMO A

| IM1 | IM0 | SRAM | Register | Remarks |
| :--- | :--- | :--- | :--- | :---: |
| 1 | 1 | 24bit-RGB interface, D[23:0] | 16-bit SPI, SDI/SDO Serial data, SCL rising trigger <br>  |  |
|  |  | DB23~DB16: R7~R0 <br> DB15~DB8: G7~G0 <br> DB7~DB0: B7~B0 |  |  |

5. Absolute maximum ratings

Teble5-1 Absolute maximum ratings
GND=0V

| Parameter |  | Symbol | MIN | MAX | Unit | Remark |
| :--- | :--- | :---: | :---: | :---: | :---: | :---: |
| Power Supply Voltage | Analog | VCI | -0.3 | +4.4 | V | Ta=25deg.C |
|  | Digital | IOVCC | -0.3 | +4.4 | V | Ta=25deg.C |
| Input Signal | VI | -0.3 | IOVCC +0.5 | V | Ta=25deg.C |  |
| Output Signal | VO | -0.3 | IOVCC +0.5 | V | Ta=25deg.C |  |
| Back Light Input Current | ILEDK | -0.0002 | 30 | mA | Ta=25deg.C |  |
| Back Light Input Voltage | VLEDK | - | 3 | V | Ta=25deg.C |  |
| Storage Temperature | Tstg | -30 | 80 | deg.C | $[$ Note5-1,2] |  |
| Operating Temperature | Topr1 | -20 | 70 | deg.C | $[$ Note5-1,2,3] |  |

[Note5-1] This rating applies to all parts of the module and should not be exceeded.
[Note5-2] Avoid dew condensation on the module.
Otherwise electrical current leaks will occur , and it cannot meet the specifications.
[Note5-3] The operating temperature guarantees only operation of the circuit. For contrast, speed of response, and other factors related to display quality are determined in the circumstances with $\mathrm{Ta}=25 \mathrm{deg} . \mathrm{C}$.

## 6. Electrical characteristics(DC Characteristics)

6-1 TFT-LCD panel driving section
Table6-1
$\mathrm{GND}=0 \mathrm{~V}, \mathrm{Ta}=25^{\circ} \mathrm{C}$

| Parameter | Symbol | Min | Typ | Max | Unit | Remark |
| :--- | :---: | :---: | :---: | :---: | :---: | :--- |
| Power Supply Voltage(Analog) | VCI | 2.6 | 2.8 | 3.3 | V | $[$ Note6-1] |
| Power Supply Voltage(Didital) | IOVCC | 1.7 | 1.8 | 3.3 | V | $[$ Note6-1] |
| Input Voltage(Low) | VIL | 0 | - | 0.3 IOVCC | V | $[$ Note6-1] |
| Input Voltage(High) | VIH | 0.7 IOVCC | - | IOVCC | V | $[$ Note6-1] |
| Input Current(Low) | IIL | -10 | - | - | uA |  |
| Input Curent(High) | IIH | - | - | 10 | uA |  |
| Output Voltage(Low) | VOL | 0 | - | 0.2 IOVCC | V | IOL=+0.1mA |
| Output Voltage(High) | VOh | 0.8 IOVCC | - | IOVCC | V | IOH=-0.1mA |
| Power Consumption | Pnorm | - | 75 | - | mW | $[$ Note6-1] |
|  | PSLEEP | - | 10 | - | mW | $[$ Note6-1] |
|  | PDeepsleep | - | 1.0 | - | mW | $[$ Note6-1] |

## [Note6-1]

1. Conditions : $\mathrm{Ta}=25 \mathrm{deg} . \mathrm{C}, \mathrm{VCI}=2.8 \mathrm{~V}, \mathrm{IOVCC}=1.8 \mathrm{~V}$,Refresh rate $=60 \mathrm{~Hz}, \mathrm{Ta}=-20$ to $+70 \mathrm{deg} . \mathrm{C}$ operational
2. Pnorm: Power Consumption of normal display mode.

PSLEEP: Power Consumption of Sleep mode.
PDeepsleep: Power Consumption of Deep sleep mode.
6-2 LED back light driving section
Table6-2
$\mathrm{GND}=0 \mathrm{~V}, \mathrm{Ta}=25^{\circ} \mathrm{C}$

| Parameter | Symbol | Min | Typ | Max | Unit | Remark |
| :--- | :---: | :---: | :---: | :---: | :---: | :--- |
| Back Light Input Current | ILB | - | 20 | - | A | $[$ Note6-2,3] |
| Back Light Input Voltage | VBL | 24.8 | 25.2 | 25.6 | V | $[$ Note6-2] |
| Back Light Power Comsuption | PBL | - | 504 | 840 | mW | $[$ Note6-4] |

[Note6-2] Apply to terminal of LEDK
[Note6-3] For better LED Backlight driving quality, it is recommended to utilize the adaptive boost Converter with current balancing function to drive LED Backlight.
[Note6-4] $\mathrm{P}_{\text {BL }}=$ IBL $\times$ VBL (Without LED converter transfer efficiency)
[Note6-5] Ambient Temperature - Allowable Forward Current

## 7. Electrical characteristics (AC Characteristics/FUNCTIONAL DESCRIPTION)

7-1 Input Data Signals and Display Position on the screen

Display position of input data (H,V)

## 7-2. Serial Interface Characteristics

Serial Interface detail information refer to LCD driver IC specification sheet.

7-2-1 Serial Interface Timing Diagrams

Table7-2

| Signal | Symbol | Parameter | MIN | MAX | Unit | Remark |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| SCL | tSCYCW | Serial clock cycle(Write) | 100 | - | ns |  |
|  | tSHW | SCL"H"pulse width(Write) | 40 | - | ns |  |
|  | tSLW | SCL"L"pulse width(Write) | 40 | - | ns |  |
|  | tSCYCR | Serial clock cycle(Read GRAM) | 300 | - | ns |  |
|  | tSHR | SCL"H"pulse width(Read GRAM) | 140 | - | ns |  |
|  | tSLR | SCL"L"pulse width(Read GRAM) | 140 | - | ns |  |
|  | tSCYCR | Serial clock cycle(Read ID) | 300 | - | ns |  |
|  | tSHR | SCL"H"pulse width(Read ID) | 140 | - | ns |  |
|  | tSLR | SCL"L"pulse width(Read ID) | 140 | - | ns |  |
| SDI(SDO) | tSDS | Data setup time | 20 | - | ns |  |
|  | tSDH | Data hold time | 20 | - | ns |  |
|  | tACC | Access time |  | 120 | ns |  |
|  | tOH | Output disable time | 5 | - | ns |  |
| CSX | tCHW | Chip select " $\mathrm{H}^{\prime \prime}$ pulse width | 45 | - | ns |  |
|  | tCSS | Chip select setup time | 20 | - | ns |  |
|  | tCSH | Chip select hold time | 20 | - | ns |  |

[Note7-1] VCI=2.6V to 3.3V, IOVCC=1.7V to $4.8 \mathrm{~V}, \mathrm{GND}=0 \mathrm{~V}, \mathrm{Ta}=-30$ to 70 deg.C
[Note7-2] The input signal rise time and fall time (tr, tf) is specified at 15 ns or less. Logic high and low levels are specified as $20 \%$ and $80 \%$ of VDDI for Input signals.

## 7-3. RGB Interface Characteristics

RGB Interface more detail information refer to LCD driver IC specification sheet.

## 7-3-1 RGB Interface General Timing Diagram

7-3-2 Video signal data writing method in RGB Interface

## Notes:

1. Constraint:

V-Back Porch (Vsync+VBP) 2 HS lines, V-Front-Borch (VFP) $\geqq 2$ HS lines
H-Back Porch (Hsync+HBP) 5 PCLK clocks, H-Front-Porch (HFP) 22 PCLK clocks
2. tVHS $\geqq 400 \mathrm{~ns}$

Note2:
RGB interface with SPI Timing Sequence is refer to LCD driver IC specification sheet.

| Parameters | Symbols | Min. | Typ. | Max. | Units |
| :--- | :---: | :---: | :---: | :---: | :---: |
| PCLK Cycle | tDCYC | 33 | 49.8 | 125 | ns |
| Pixel Clock Low Duration | tDLW | 11 | - | - | ns |
| Pixel Clock High Duration | tDHW | 11 | - | - | ns |
| Horizontal Synchronization | Hsync | 5 | 9 | - | PCLK |
| Horizontal Back Porch | HBP | 5 | 30 | - | PCLK |
| Horizontal Address | Hadr | 480 | 480 | - | PCLK |
| Horizontal Front Porch | HFP | 5 | 16 | - | PCLK |
| Vertical Synchronization | Vsync | 2 | 5 | - | Line |
| Vertical Back Porch | VBP | 2 | 3 | - | Line |
| Vertical Address | Vadr | 800 | 800 | - | Line |
| Vertical Front Porch | VFP | 2 | 3 | - | Line |
| Vertical Frequency | VF | 55 | 60 | 65 | Hz |
| Horizontal Frequency | HF | - | - | - | KHz |
| PCLK Frequency | PF | 20.3 | 23.5 | 28.1 | MHz |
| Vsync setup Time | tVSYNS | 10 | - | - | ns |
| Vsync hold Time | tVSYNH | 10 | - | - | ns |
| Hsync setup Time | tHSYNS | 10 | - | - | ns |
| Hsync hold Time | tHSYNH | 10 | - | - | ns |
| Data setup Time | tDDS | 10 | - | - | ns |
| Data Hold Time | tDDH | 10 | - | - | ns |

7-3-3 Write data for RGB interface bus width set

7-3-4 Detailed Timing for RGB interface

Table7-3

| Signal | Symbol | Parameter | MIN | MAX | Unit | Remark |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| VS | tVSYNS | VSYNC setup time | 10 | - | ns |  |
|  | tVSYNH | VSYNC hold time | 10 | - | ns |  |
| HS | tHSYNS | HSYNC setup time | 10 | - | ns |  |
|  | tHSYNH | HSYNC hold time | 10 | - | ns |  |
|  | tHVPD | HSYNC to VSYC falling edge | 400 | - | ns |  |
| PCLK | tDCYC | PCLK cycle time | 33 | 125 | ns |  |
|  | tDLW | PCLK "L" pulse width | 11 |  | ns |  |
|  | tDHW | PCLK "H" pulse width | 11 | - | ns |  |
|  | tDFREQ | PCLK frequency | 8 | - | ns |  |
| DE | tDCSS | DE setup time | 10 | - | ns |  |
|  | tDCSH | DE hold time | 10 | - | ns |  |
| D0-D23 | tDDS | RGB data setup time | 10 | - | ns |  |
|  | tDDH | RGB data hold time | 10 | - | ns |  |

[Note7-3] VCI=2.6V to 3.3V, IOVCC=1.7V to $4.8 \mathrm{~V}, \mathrm{GND}=0 \mathrm{~V}, \mathrm{Ta}=-30$ to $70 \mathrm{deg} . \mathrm{C}$
[Note7-4] The input signal rise time and fall time (tr, tf) is specified at 15 ns or less. Logic high and low levels are specified as $20 \%$ and $80 \%$ of VDDI for Input signals.

## 8. Power On/Off Sequence

Recommended Power On / Off Sequence
The LCD adopts high voltage driver IC, so it could be permanently damaged under a wrong power on/off sequence. The suggested LCD power sequence is below:

## 9. Reset input timing

Table9-1

| Symbol | Parameter | MIN | TYP | MAX | Unit | Remark |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| tRESW | Reset low pule width | 10 | - | - | ns |  |
| tREST | Reset complete width | - | - | 120 | ms |  |

[Note7-5] VCI=2.6V to 3.3V, IOVCC=1.7V to 4.8V, GND=0V, Ta=-30 to 70 deg.C
[Note7-6] Detail information refer to LCD driver IC specification sheet.

## 10. Initial Sequence

During power on, 'RESX' must be applied for a minimum of 10us after both VCI and IOVCC have been applied. 'RESX’ can be undefined during power-on but must be applied subsequently to ensure correct LCD controller operation. IOVCC and VCI can be applied in any order.
During power-off, if the LCD controller is in 'Sleep Out' mode, VCI and IOVCC must be powered down a minimum of 120 ms after RESX has been released. If the LCD controller is in 'Sleep In' mode, IOVCC and VCI can be powered down a minimum of Oms after 'RESX' has been released. IOVCC and VCI can be powered down in any order.
‘CSX' can be applied at any time. 'RESX' has priority over 'CSX’ .

10-1 Case 1 - RESX line is held high or unstable by host at power-on

Note 1. Time when the latter signal rises up to $90 \%$ of its typical value, e.g. when VCI comes later.

This time is defined at the cross point of $90 \%$ of VCI Typ, not VCI Min, (see Table4).
Note 2. Time when the former signal falls down to $90 \%$ of its typical value, e.g. when VCI falls earlier.This time is defined at the cross point of $90 \%$ of VCI Typ, not VCI Min.

| Parameter | Value |
| :---: | :---: |
| treW | $t /=$ no limit |
| tfPW | $+/-110$ limit |
| trPWOSX | $+/=$ no limit |
| HPWCAX | +/-rue limili. |
| trPWMRESY | + no limit |
| tfPWRESX1 | min 120 mS |
| tHYWHEHK2 | + no limit |

10-2 Case 2 - RESX line is held low by host at power-on

Note 1. Time when the latter signal rises up to $90 \%$ of its typical value, e.g. when VCI comes later. This time is defined at the cross point of $90 \%$ of VCI Typ, not VCI Min, (see Table4).
Note 2. Time when the former signal falls down to $90 \%$ of its typical value, e.g. when VCI falls earlier. This time is defined at the cross point of $90 \%$ of VCI Typ, not VCI Min, (see Table 4 ).

| Parameter | Value |
| :--- | :--- |
| trPW | $+/-$ no limit |
| tfPW | $+/-$ no limit |
| trPWCSX | $+/-$ no limit |
| tfPWCSX | $+/-$ no limit |
| trPWRESX | min 10 us |
| tfPWRESX1 | min 120 ms |
| tfPWRESX2 | min 0 mS |

## Note

There will be no damage to the display module if the above power sequences are not met.
There will be no abnormal visible effects on the display panel during the sequence.
There will be no abnormal visible effects on the display between the end of power on sequence and before entering Sleep Out mode. Also between entering Sleep In mode and power off sequence. There are no limits for RESX timings during power on sequence. (e.g. from the undefined level to High or low, when the first RESX low pulse after VDD and IOVCC are powered-on, etc.)

## 10-3 Uncontrolled Power-off

Uncontrolled power-off (e.g. the battery is removed without following the proper power-off sequence), will not damage the LCD module or cause the LCD module to inflict any damage on the host. There will not be any abnormal visible effects left on the display after a period of 5 seconds following an uncontrolled power-off. The display will remain blank until the power on sequence is initiated.

## 11. Internal Display Backlight Control (PWM Control, CABC)

PWM control,CABC(Content Adaptive Brightness Control) function detail information refer to LCD driver IC specification sheet.

LQ040Y3DX80 Baclight control application

## 12. Serial Interface

The serial interface, the trigger edge of serial clock (SCL) is rising edge . The serial interface is used to communication between the micro controller and the LCD driver chip. It contains CSX (chip select), SCL (serial clock), SDI (serial data input) and SDO (serial data output). Serial clock (SCL) is used for interface with MPU only, so it can be stopped when no communication is necessary. If the host places the SDI line into high-impedance state during the read intervals, then the SDI and SDO can be tied together.

12-1 Write Mode

## 12-2 Read Mode

## 13. Optical characteristics

Table13-1 Optical characteristics
$\mathrm{Ta}=25^{\circ} \mathrm{C}$

| Item |  | Symbol | Condition | Min. | Typ. | Max. | Unit | Remark |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Response time |  | Tr + Td | $\theta=0^{\circ}$ | - | 40 | - | ms | Note13-3 |
| Brightness |  | Br | $\theta=0^{\circ}$ | 300 | 320 | - | $\mathrm{Cd} / \mathrm{m} 2$ | Note13-4 |
| Contrast ratio |  | CR | $\theta=0^{\circ}$ | 600 | 800 | - | - | Note13-2 |
| Viewing Angle | Top |  | $C R \geq 10$ | 80 | 85 | - | degree | Note13-1 |
|  | Bottom |  |  | 80 | 85 | - |  |  |
|  | Left |  |  | 80 | 85 | - |  |  |
|  | Right |  |  | 80 | 85 | - |  |  |
| White Chromaticity |  | X | CIE | 0.25 | 0.30 | 0.35 | - | Note13-4 |
|  |  | Y |  | 0.27 | 0.32 | 0.37 | - | Note13-4 |
| NTSC ratio |  |  | - | - | 70 | - | \% | Note13-4 |

[Note13-1]
The optical characteristics measurements are operated under a stable luminescence (ILED $=20 \mathrm{~mA}$ ) and a dark condition.

Viewing angle range/Response time measurement method

Luminance/Contrast/Chromaticity measurement method
[Note13-2] Definitions of viewing angle range

[Note13-3] Definition of contrast ratio
The contrast ratio is defined as the following

$$
\text { Contrast ratio }(\mathrm{CR})=\frac{\text { Luminance (brightness) with all pixels white }}{\text { Luminance (brightness) with all pixels black }}
$$

[Note13-4] Definition of response time
The response time is defined as the following figure and shall be measured by switching the input signal for "black" and "white"

[Note13-5] This shall be measured at center of the screen.

## 14. Display quality

The display quality of the color TFT-LCD module shall be in compliance with the Incoming Inspection Standards for TFT-LCD.

## 15. Mechanical characteristics

External appearance
No extreme defect exists

## 16. For handling and system design

(1) Do not scratch the surface of the polarizer film as it is easily damaged.
(2) If the cleaning of the surface of the LCD panel is necessary, wipe it swiftly with cotton or other soft cloth. Do not use organic solvent as it damages polarizer.
(3) Water droplets on polarizer must be wiped off immediately as they may cause color changes, or other defects if remained for a long time.
(4) Since this LCD panel is made of thin glass, dropping the module or banging it against hard objects may cause cracks or fragmentation
(5) Certain materials such as epoxy resin (amine's hardener) or silicone adhesive agent (de-alcohol or de-oxym) emits gas to which polarizer reacts (color change). Check carefully that gas from materials used in system housing or packaging do not hart polarizer.
(6) Liquid crystal material will freeze below specified storage temperature range and it will not get back to normal quality even after temperature comes back within specified temperature range. Liquid crystal material will become isotropic above specified temperature range and may not get back to normal quality. Keep the LCD module always within specified temperature range.
(7) Do not expose LCD module to the direct sunlight or to strong ultraviolet light for long time.
(8) If the LCD driver IC (COG) is exposed to light, normal operation may be impeded. It is necessary to design so that the light is shut off when the LCD module is mounted.
(9) Do not disassemble the LCD module as it may cause permanent damage.
(10) As this LCD module contains components sensitive to electrostatic discharge, be sure to follow the instructions in below.
(1) Operators must wear anti-static wears to prevent electrostatic charge up to and discharge from human body.
(2) Equipment and containers Process equipment such as conveyer, soldering iron, working bench and containers may possibly generate electrostatic charge up and discharge. Equipment must be grounded through 100Mohms resistance. Use ion blower.
(3) Floor is an important part to leak static electricity which is generated from human body or equipment. There is a possibility that the static electricity is charged to them without leakage in case of insulating floor, so the countermeasure(electrostatic earth: $1 \times 108 \Omega$ ) should be made.
(4)Humidity Proper humidity of working room may reduce the risk of electrostatic charge up and discharge. Humidity should be kept over $50 \%$ all the time.
(5) Transportation/storage Storage materials must be anti-static to prevent causing electrostatic discharge.
(6)Others Protective film is attached on the surface of LCD panel to prevent scratches or other damages. When removing this protective film, remove it slowly under proper anti-ESD control such as ion blower. (11) Hold LCD very carefully when placing LCD module into the system housing. Do not apply excessive stress or pressure to LCD module. Do not to use chloroprene rubber as it may affect on the reliability of the electrical interconnection.
(12) Do not hold or touch LCD panel to flex interconnection area as it may be damaged.
(13) As the binding material between LCD panel and flex connector mentioned in 12) contains an organic material, any type of organic solvents are not allowed to be used. Direct contact by fingers is also prohibited.
(14) When carrying the LCD module, place it on the tray to protect from mechanical damage. It is recommended to use the conductive trays to protect the CMOS components from electrostatic discharge. When holding the module, hold the Plastic Frame of LCD module so that the panel, COG and other electric parts are not damaged.
(15) Do not touch the COG's patterning area. Otherwise the circuit may be damaged.
(16) Do not touch LSI chips as it may cause a trouble in the inner lead connection.
(17) Place a protective cover on the LCD module to protect the glass panel from mechanical damages.
(18) LCD panel is susceptible to mechanical stress and even the slightest stress will cause a color
change in background. So make sure the LCD panel is placed on flat plane without any continuous twisting, bending or pushing stress.
(19) Protective film is placed onto the surface of LCD panel when it is shipped from factory. Make sure to peel it off before assembling the LCD module into the system. Be very careful not to damage LCD module by electrostatic discharge when peeling off this protective film. Ion blower and ground strap are recommended.
(20) Make sure the mechanical design of the system in which the LCD module will be assembled matches specified viewing angle of this LCD module.
(21) This LCD module does not contain nor use any ODS (1,1,1-Trichloroethane, CCL4) in all materials used, in all production processes.

## 17.Packaging Specification

(1) Packaging quantities

320 modules per master carton
(2) Packaging weight

About 13.0 kg
(3) Packaging outline dimensions
$578 \mathrm{~mm} \times 382 \mathrm{~mm} \times 255 \mathrm{~mm}(\mathrm{H})$

## 18. For operating LCD module

(1) Do not operate or store the LCD module under outside of specified environmental conditions.
(2) At the shipment, adjust the contrast of each LCD module with electric volume. LCD contrast may vary from panel to panel depending on variation of LCD power voltage from system
(3) As opt-electrical characteristics of LCD will be changed, dependent on the temperature, the confirmation of display quality and characteristics has to be done after temperature is set at $25^{\circ} \mathrm{C}$ and it becomes stable.

## 19. Precautions for Storage

(1) Do not expose the LCD module to direct sunlight or strong ultraviolet light for long periods. Store in a dark place.
(2) The liquid crystal material will solidify if stored below the rated storage temperature and will become an isotropic liquid if stored above the rated storage temperature, and may not retain its original properties. Only store the module at normal temperature and humidity $\left(25 \pm 5^{\circ} \mathrm{C}, 60 \pm 10 \% \mathrm{RH}\right)$ in order to avoid exposing the front polarizer to chronic humidity.
(3) Keeping Method
a. Don't keeping under the direct sunlight. b. Keeping in the tray under the dark place.

DO

(1) Do not operate or store the LCD module under outside of specified environmental conditions.
(2) Be sure to prevent light striking the chip surface.

## 20. Serial Number Label Identification

## $\underline{\text { LQ040Y3DX80 }} \underline{2} \underline{3} \underline{000001} \underline{A} \underline{\text { SHARP }}$

```
LCD Module Name
Production Year (1,2,3...... *2012 \(\rightarrow\) 2)
Production Month(1,2,3......9,X,Y,Z *March \(\rightarrow\) 3)
Serial No(000001~)
Revision code(A,B,C......)
Internal Code
```

## 21. Reliability Test Items

| No. | Test items | Test conditions |
| :---: | :---: | :---: |
| (1) | Temperature Cycling Storage | $-30^{\circ} \mathrm{C}(0.5 \mathrm{~h})----80^{\circ} \mathrm{C}(0.5 \mathrm{~h}) * 1$ cycle $\quad 100$ cycle |
| (2) | High Temp. Storage | $\mathrm{Ta}=80^{\circ} \mathrm{C} \quad 240 \mathrm{~h}$ |
| (3) | Low Temp. Storage | $\mathrm{Ta}=-30^{\circ} \mathrm{C} \quad 240 \mathrm{~h}$ |
| (4) | High Temperature <br> \& High Humidity Storage | $\mathrm{Ta}=60^{\circ} \mathrm{C} / 90 \%$ 240h |
| (5) | High Temp. Operation | $\mathrm{Ta}=70^{\circ} \mathrm{C} \quad 240 \mathrm{~h}$ |
| (6) | Low Temp. Operation | Ta=-20 ${ }^{\circ} \mathrm{C}$ 240h |
| (7) | ESD | Discharge resistance: $0 \Omega$ <br> Discharge capacitor:200Pf <br> Discharge voltage: $\pm 200 \mathrm{~V}$ MAX <br> Discharge 1 time to each input line <br> "GND" of LCM is connected to GND of test system ground |
| (8) | Vibration test | Frequency range: $10 \mathrm{~Hz} \sim 55 \mathrm{~Hz}$ <br> Stroke: 1.5 mm , Sweep: $10 \mathrm{~Hz} \sim 55 \mathrm{~Hz}$ <br> $\mathrm{X}, \mathrm{Y}, \mathrm{Z}$ 2hours for each direction (total 6 hours) |
| (9) | Shock test | $980 \mathrm{~m} / \mathrm{s} 2 \cdot 6 \mathrm{~ms}, \pm X ; \pm \mathrm{Y} ; \pm \mathrm{Z} 3$ times for each direction ( JIS C0041, A-7 Condition C) [Note20-2] |

[Note21-1] In the standard condition, there shall be no practical problems that may affect the display function.
[Note21-2] Definition of $X, Y, Z$ direction is shown as follows

22. RoHS

This TFT-LCD module is RoHS compliant products

Fig. 1 Outline Dimensions

| Step | Instruction/Parameters | Delay time | R/W | Reg. hex. | Data hex. | Command |
| 1 | REST pin high |  |  |  |  |  |
| 2 | REST pin low | 10 ms |  |  |  |  |
| 3 | REST pin high |  |  |  |  |  |
| 4 | Delay | Power on Initial <br> Sequence |  |  |  |  |
| 5 |  |  |  |  |  |  |
| 6 |  |  |  |  |  |  |

## Notes:

1. Undefined commands are treated as NOP (00h) command.
2. $\mathrm{C}=$ command, $\mathrm{W}=$ write, $\mathrm{R}=$ read, $+=$ number of following parameters, (in Bytes), $\mathrm{d}=\mathrm{dummy}$ clock cycle.
