These specification sheets are the proprietary product of SHARP CORPORATION("SHARP) and include materials protected under copyright of SHARP. Do not reproduce or cause any third party to reproduce them in any form or by any means, electronic or mechanical, for any purpose, in whole or in part, without the express written permission of SHARP.

The device listed in these specification sheets was designed and manufactured for use in OA equipment.

In case of using the device for applications such as control and safety equipment for transportation(aircraft, trains, automobiles, etc.), rescue and security equipment and various safety related equipment which require higher reliability and safety, take into consideration that appropriate measures such as fail-safe functions and redundant system design should be taken.

Do not use the device for equipment that requires an extreme level of reliability, such as aerospace applications, telecommunication equipment(trunk lines), nuclear power control equipment and medical or other equipment for life support.

SHARP assumes no responsibility for any damage resulting from the use of the device which does not comply with the instructions and the precautions specified in these specification sheets.

Contact and consult with a SHARP sales representative for any questions about this device.

1. Application

This specification applies to a color TFT-LCD module, LQ150U1LH22

2. Overview

This module is a color active matrix LCD module incorporating amorphous silicon TFT (Thin Film Transistor). This module is based on the standards of SPWG(Standard Panels Working Group). It is composed of a color TFT-LCD panel, driver ICs, control circuit, power supply circuit, and a backlight unit. Graphics and texts can be displayed on a $1600 \times 3 \times 1200$ dots panel with 262,144 colors by using LVDS (Low Voltage Differential Signaling) to interface and supplying +3.3V DC supply voltage for TFT-LCD panel driving and supply voltage for backlight.

The TFT-LCD panel used for this module has very high aperture ratio. A low-reflection and higher-color-saturation type color filter is also used for this panel. Therefore, high-brightness and high-contrast image, which is suitable for the multimedia use, can be obtained by using this module.

Optimum viewing direction is 6 o'clock.

Backlight-driving DC/AC inverter is built in this module.

[Features]

- 1) High aperture panel; high-brightness or low power consumption.
- 2) Brilliant and high contrast image.
- 3) Small footprint and thin shape.
- 4) Light weight.

【Note2】 On-off conditions for supply voltage

Vcc rise time

$t1 \leq 10\text{ ms}$

On time Vcc and signal

$0 \leq t2 \leq 50\text{ ms}$

Off time signal and Vcc

$0 \leq t3 \leq 50\text{ ms}$

Off time Vcc

$400\text{ms} \leq t4$

On time lamp and signal

$200\text{ms} \leq t5$

Power sequence for Backlight is not especially specified, however it is recommended to consider some timing difference between LVDS input and Backlight input as shown above.

If the Backlight lights on before LCD starting, or if the Backlight is kept on after LCD stopping, the screen may look white for a moment or abnormal image may be displayed.

This is caused by variation in output signal from timing generator at LVDS input on or off. It does not cause the damage to the LCD module.

Vcc-dip conditions

1) $2.5\text{ V} \leq V_{cc} < 3.0\text{ V}$

$t_d \leq 10\text{ ms}$

2) $V_{cc} < 2.5\text{ V}$

Vcc-dip conditions should also follow the On-off conditions for supply voltage .

【Note3】 Typical current situation : 16-gray-bar pattern.

V_{cc}=+3.3V

6-2. Inverter driving

6-2-1. Backlight characteristic

The backlight system is an edge-lighting type with single CCFT (Cold Cathode Fluorescent Tube).

The life time of the lamp are shown in the following table.

Parameter	Symbol	Min.	Typ.	Max.	Unit	Remark
Lamp life time	L _L	10000	—	—	Hour	【Note】

【Note】 Lamp life time is defined as the time when ① occurs in the continuous operation under the condition of Ta = 25°C and SDA data=00_{HEX}.

① Brightness becomes 50 % of the original value under standard condition.

【Note】 : Brightness control from minimum to maximum

6-2-4. Power ON/OFF sequence

$9 \text{ V} \leq \text{Vin} < 21 \text{ V}$

$10 \text{ ms} \leq t_d$

6-2-5. FPVEE ON sequence

Backlight power on/off is possible with FPVEE.

Make sure to have more than 0.2 second-interval between each power-on.

6-2-6. The Condition of Shut Down

Please refer to the figure below for the conditions that will cause the inverter shut down.

If the V_{IN} voltage is higher than 7.0V and there is no enable signal, then the inverter will shut down. When the input voltage is less than 7.0V and lasts more than 150ms, the same will happen.

The enable signal has to be reset to get the inverter started again.

White Uniformity		δ_w		—	—	1.45		【Note5】

※ The measurement shall be executed 30 minutes after lighting at rating. (typical condition: SDA=00_{HEX})

The optical characteristics shall be measured in a dark room or equivalent state with the method shown in Fig.2 below.

Fig.2 Optical characteristics measurement method

【Note1】 Definitions of viewing angle range:

【Note2】 Definition of contrast ratio:

The contrast ratio is defined as the following.

$$\text{Contrast Ratio (CR)} = \frac{\text{Luminance (brightness) with all pixels white}}{\text{Luminance (brightness) with all pixels black}}$$

【Note3】 Definition of response time:

The response time is defined as the following figure and shall be measured by switching the input signal for "black" and "white".

【Note4】 This shall be measured at center of the screen.

【Note5】 Definition of white uniformity:

White uniformity is defined as the following with five measurements (A~E).

$$\delta w = \frac{\text{Maximum Luminance of five points (brightness)}}{\text{Minimum Luminance of five points (brightness)}}$$

11. Display Quality

The display quality of the color TFT-LCD module shall be in compliance with the Incoming Inspection Standard.

12. Handling Precautions

- a) Be sure to turn off the power supply when inserting or disconnecting the cable.
- b) Be sure to design the cabinet so that the module can be installed without any extra stress such as warp or twist.
- c) Since the front polarizer is easily damaged, pay attention not to scratch it.
- d) Wipe off water drop immediately. Long contact with water may cause discoloration or spots.
- e) When the panel surface is soiled, wipe it with absorbent cotton or other soft cloth.
- f) Since the panel is made of glass, it may break or crack if dropped or bumped on hard surface.
Handle with care.
- g) Since CMOS LSI is used in this module, take care of static electricity and injure the human earth when handling.
- h) Observe all other precautionary requirements in handling components.
- i) This module has its circuitry PCBs on the rear side and should be handled carefully in order not to be stressed.
- j) Laminated film is attached to the module surface to prevent it from being scratched . Peel the film off slowly just before the use with strict attention to electrostatic charges. Ionized air shall be blown over during the action. Blow off the 'dust' on the polarizer by using an ionized nitrogen gun, etc..

13. Packing form (See Fig.3)

- a) Piling number of cartons : 5 cartons
- b) Package quantity in one carton : 10 pcs
- c) Carton size : 438(W)×372(D)×307(H)mm
- d) Total mass of one carton filled with full modules : 8400g

14. Reliability test items

No.	Test item	Conditions
1	High temperature storage test	Ta = 60°C 240h
2	Low temperature storage test	Ta = -25°C 240h
3	High temperature & high humidity operation test	Ta = 40°C ; 95 %RH 240h (No condensation)
4	High temperature operation test	Ta = 50°C 240h (The panel temp. must be less than 60°C)
5	Low temperature operation test	Ta = 0°C 240h
6	Vibration test (non- operating)	Frequency : 10~57Hz/Vibration width (one side):0.075mm : 58~500Hz/Gravity:9.8m/s ² Sweep time : 11 minutes Test period : 3 hours (1 hour for each direction of X,Y,Z)
7	Shock test (non- operating)	Max. gravity : 490 m/s ² Pulse width : 11 ms, sine wave Direction : ±X,±Y,±Z once for each direction.

15. Bar code label

1) Printing Specification of module label

Model : LQ150U1LH22···DP/N037TTK

Production Lot No. : (e.g.) Japan Product, 2000/6 Production Lot the 10th unit

Rev. : A00

The bar code size and information to be included:

- DS/N: 20-digit barcode(The longer and larger barcode on the upper side) : Code 128B
- DP/N: Rev(revision) barcode(The smaller barcode on the lower side) : Code 39
- Wide to narrow element ratio of 3 to 1
- The narrow element must be a minimum of 5 mils (0.127mm)

BAR CODE (UPPER SIDE)

1 st to 2 th digit	(1)Country of Origin : “JP” for Japan made
3 st to 8 th digit	(2) DELL Part Number: “(has been changed to 6-digit with only 1 leading “0”)”
9 th to 13 th digit from the left	(3) Supplier ID: “14591”
14 th digit	(4) the last digit of the year
15 th digit	(5) the month (1 to 9, A=OCT, B=NOV, C=DEC)
16 th digit	(6) “1” (One) fixed
17 th to 20 nd digit	(7) 16 Repeated Counting Numbers (0000 to FFFF)

16. Others

- 1) Adjusting volume have been set optimally before shipment, so do not change any adjusted value.
If adjusted value is changed, the technical literature may not be satisfied.
- 2) Disassembling the module can cause permanent damage and should be strictly avoided.
- 3) Please be careful since image retention may occur when a fixed pattern is displayed for a long time.
- 4) If any problem occurs in relation to the description of this specification, it shall be resolved through discussion with spirit of cooperation.
