Application

This Specifications applies to the color 15.0 XGA TFT-LCD module LQ150X1LG51.

These Specifications sheets are the proprietary product of SHARP CORPORATION("SHARP) and include materials protected under copyright of SHARP. Do not reproduce or cause any third party to reproduce them in any form or by any means, electronic or mechanical, for any purpose, in whole or in part, without the express written permission of SHARP.

The device listed in these Specifications sheets was designed and manufactured for use in general electronic equipment.

In case of using the device for applications such as control and safety equipment for transportation (controls of aircraft, trains, automobiles, etc.), rescue and security equipment and various safety related equipment which require higher reliability and safety, take into consideration that appropriate measures such as fail-safe functions and redundant system design should be taken.

Do not use the device for equipment that requires an extreme level of reliability, such as aerospace applications, telecommunication equipment(trunk lines), nuclear power control equipment and medical or other equipment for life support.

SHARP assumes no responsibility for any damage resulting from the use of the device which does not comply with the instructions and the precautions specified in these specification sheets.

Confirm "12. Handling Precautions" item when you use the device.

Contact and consult with a SHARP sales representative for any questions about this device.

2. Overview

This module is a color active matrix LCD module incorporating amorphous silicon TFT ($\underline{\text{Thin }}\underline{\text{Film }}\underline{\text{Transistor}}$). It is composed of a color TFT-LCD panel, driver ICs, control circuit, power supply circuit and a back light unit. Graphics and texts can be displayed on a $1024 \times \text{RGB} \times 768$ dots panel with about 16 million colors by using LVDS ($\underline{\text{Low }}\underline{\text{Voltage }}\underline{\text{D}}$ ifferential $\underline{\text{Signaling}}$) and supplying +3.3V DC supply voltages for TFT-LCD panel driving and supply voltage for backlight.

This TFT-LCD module conforms to PSWG.

3. Mechanical Specifications

Parameter	Specifications	Unit
Display size	38 (Diagonal)	cm
	15.0 (Diagonal)	Inch
Active area	304.1 (H) × 228.1 (V)	mm
Pixel format	1024 (H) × 768 (V)	Pixel
	(1 pixel = R+G+B dots)	
Pixel pitch	0.297 (H) × 0.297 (V)	mm
Pixel configuration	R, G, B vertical stripe	
Display mode	Normally white	
Unit outline dimensions *1	$326.5(W) \times 253.5(H) \times 11.2(D)$	mm
Mass	1000 (Typ)	g
Surface treatment	Anti-glare and hard-coating	

^{*1.}Note: excluding back light cables, cover and pet sheet.

The thickness of module (D) doesn't contain the projection.

Outline dimensions are shown in page24-25.

[Note2]

1) On-off sequences of Vcc and data

0 < t1 10ms 0.01ms < t2 50ms

0.01 < t3 50ms 500ms t4

200ms t4 200ms t5 0.9Vcc
Vcc
VCC
VALID period
0.1Vcc
0.1Vcc
t1
t2
ON
OFF

td

Display signals and (D0+/-, D1+/-,D2+/-, D3+/-,and CK+/-)and

function signal (LVDS set)must be "0" voltage ,exclusive the VALID period (see above sequence diagram). If these signal are higher than 0.3V, the internal circuit is damaged.

If some of display and function signals of this product are cut while this product is working, even if the signal input to it once again, it might not work normally. If customer stops the display and function signals, they should be cut Vcc.

The backlight power supply voltage should be inputted within the valid period of display and function signals, in order to avoid unstable data display.

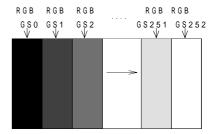

In order to prevent unstable data displaying, suggest that, during display and function signal's valid period, backlight power voltage should be input under the custom' condition as possible.

2) Dip conditions for supply voltage

- 1) 2.5V Vcc < 3.0V td 20ms
- Vcc < 2.5V
 Vcc-dip conditions should also follow the on-off conditions.

In terms of voltage variation (voltage drop)while Vcc rising edge is below 3.0V,a protection circuit may work ,and then this product may not work..

Note3 Typical current situation : 255-gray-bar pattern Vcc=+3.3V, fck=65MHz, Ta=25
Gray scale : GS(n)

Vcc

2.5V

3.0V

6-2. Backlight

The back light system is an edge-lighting type with 2 CCFTs (Cold Cathode Fluorescent Tube).

The characteristics of the lamp are shown in the following table.

The value mentioned below is at the case of one CCFT.

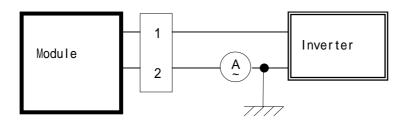

Parameter	Symbol	Min.	Typ.	Max.	Unit	Remark
Lamp current range	I_L	3.5	7.5	8.0	mArms	[Note1] at $L=350cd/m^2$ (typ.)
Lamp voltage	V_{L}	-	560	-	Vrms	IL=7.5 mArms Ta=25 60kHz
Lamp frequency	FL	50	55	60	kHz	[Note2]
Kick-off voltage	Vs	-	-	1500	Vrms	Ta=0 55kHz [Note3,4]
Lamp life time	$T_{\rm L}$	50,000			hour	[Note5]

[Note1] A lamp can be light in the range of lamp current shown above.

Maximum rating for current is measured by high frequency current measurement equipment connected to V_{LOW} at circuit showed below.

(Note: To keep enough kick-off voltage and necessary steady voltage for CCFT.)

Lamp frequency: $50 \sim 60 \text{kHz}$ Ambient temperature: $0 \sim 50$

- [Note2] Lamp frequency of inverter may produce interference with horizontal synchronous frequency, and this may cause horizontal beat on the display. Therefore, adjust lamp frequency, and keep inverter as far as from module or use electronic shielding between inverter and module to avoid interference.
- Note3 The open output voltage of the inverter shall be maintained for more than 1s; otherwise the lamp may not be turned on.
- [Note4] Above value is applicable when lamp (the long side of LCD module) is placed horizontally. (Landscape position)

Lamp life time is defined that it applied either or under this condition (Continuous turning on at Ta=25 °C, IL=7.5mA rms)

Brightness becomes 50% of the original value under standard condition.

Kick-off voltage at Ta=-0°C exceeds maximum value, 1,500Vrms.

(Lamp lifetime may vary if lamp is in portrait position due to the change of mercury density inside the lamp.)

In case of operating under lower temp environment, the lamp exhaustion is accelerated and the brightness becomes lower. (Continuous operating for around 1 month under lower temp condition may reduce the brightness to half of the original brightness.)

In case of such usage under lower temp environment, periodical lamp exchange is recommended.

[Note5] The performance of the backlight, for example life time or brightness, is much influenced by the characteristics of the DC-AC inverter for the lamp. When you design or order the inverter, please make sure that a poor lighting caused by the mismatch of the backlight and the inverter (miss-lighting,flicker, etc.) never occur. when you confirm it, the module should be operated in the same condition as it is installed in your instrument.

Be sure to use a back light power supply with the safety protection circuit such as the detection circuit for the excess voltage, excess current and or electric discharge waveform.

Be sure to use the detect circuit by which one side of the CCFT lamps can be controlled independently. Otherwise, when one side of the CCFT is open, the excess current may possibly be applied to the other side of the lamp.

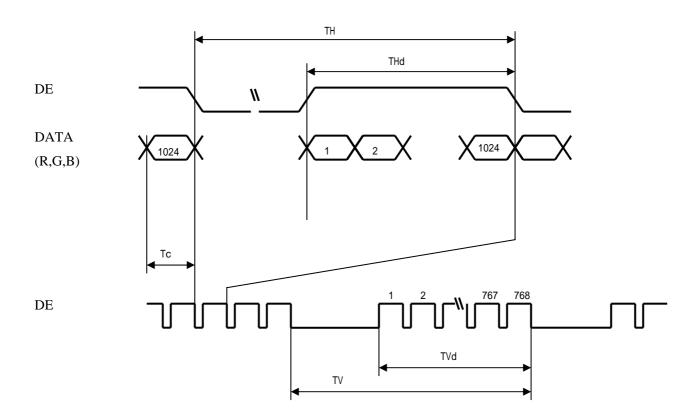

- [Note6] It is required to have the inverter designed so that to allow the impedance deviation of the two CCFT lamps and the capacity deviation of barast capacitor.
- [Note7] Under the environment of 10 lx or less, miss-lighting delay may occur.

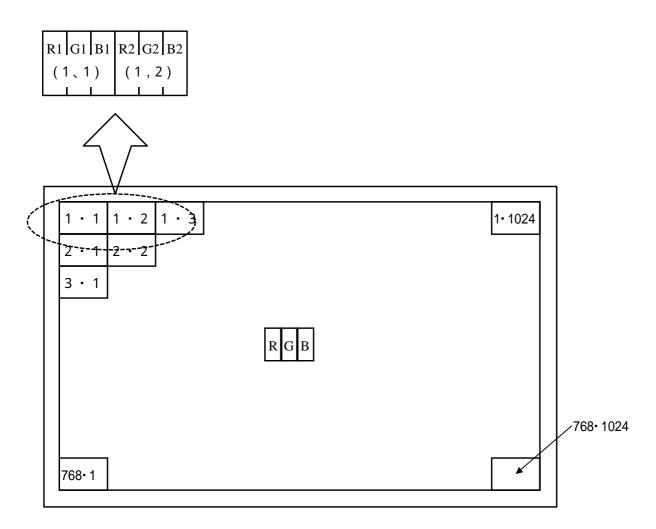

7. Timing characteristics of input signals

7-1. Timing characteristics

	Parameter	Symbol	Min.	Тур.	Max.	Unit
Clock signal	Frequency	1/Tc	60.0	65.0	70.0	MHz
ENAB signal	Horizontal period	TH	1050	1344	-	clock
			12.3	20.7	-	μs
	Horizontal period (High)	THd	1024	1024	1024	clock
	Vertical period	TV	770	806	-	line
			13.3	16.7	-	ms
	Vertical period (High)	TVd	768	768	768	line

[Note] In case of using the long vertical period, the deterioration of display quality, flicker etc. may occur.

Display Position of Data (V,H)

Chrom	naticity of	X		-	0.63	-		
l I	Red	y		-	0.35	-		
Chron	naticity of	X	=0 °	-	0.30	-		
G	reen	у	=0	-	0.59	-		
Chrom	naticity of	X		-	0.14	-		
F	Blue	у		-	0.09	-		
Luminar	nce of white	YL		280	350	-	cd/m ²	IL=7.5mA rms
								fL=55kHz
								【Note4】
White U	Jniformity	W		-	1.2	1.3		【Note5】

The measurement shall be executed 30 minutes after lighting at rating.

The optical characteristics shall be measured in a dark room or equivalent state with the method shown in Fig.2 below.

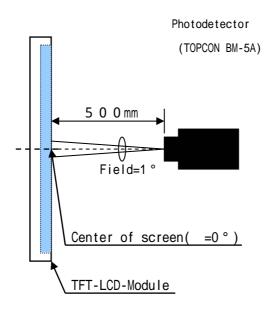

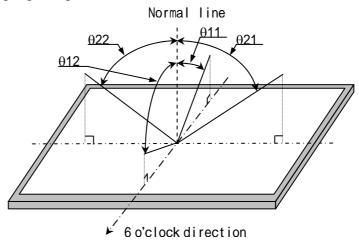

Fig2 Optical characteristics measurement method

[Note1] Definitions of viewing angle range:

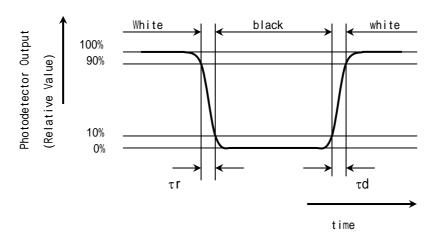

[Note2] Definition of contrast ratio:

The contrast ratio is defined as the following.

[Note3] Definition of response time:

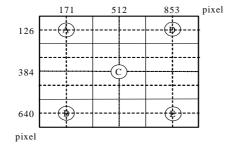

The response time is defined as the following figure and shall be measured by switching the input signal for "black" and "white".

[Note4] This shall be measured at center of the screen.

[Note5] Definition of white uniformity:

White uniformity is defined as the following with five measurements $(A \sim E)$.

W = Maximum Luminance of five points (brightness)

Minimum Luminance of five points (brightness)

- 10. Handling Precautions
 - a) Be sure to turn off the power supply when inserting or disconnecting the cable.
 - b) Be sure to design the cabinet so that the module can be installed without any extra stress such as warp or twist.
 - c) Since the front polarizer is easily damaged, pay attention not to scratch it.

Blow away dust on the polarizer with antistatic N_2 blow. It is undesirable to wipe off because a polarizer is sensitive.

It is recommended to peel off softly using the adhesive tape when soil or finger oil is stuck to the polarizer. When unavoidable, wipe off carefully with a cloth for wiping lenses.

- d) Wipe off water drop immediately. Long contact with water may cause discoloration or spots.
- e) When the panel surface is soiled, wipe it with absorbent cotton or other soft cloth.
- f) Since the panel is made of glass, it may break or crack if dropped or bumped on hard surface. Handle with care.
- g) Since CMOS LSI is used in this module, take care of static electricity and injure the human earth when handling. Observe all other precautionary requirements in handling components.
- h) Since there is a circuit board in the module back, stress is not added at the time of a design assembly. Please make it like. If stress is added, there is a possibility that circuit parts may be damaged.
- i) Protection film is attached to the module surface to prevent it from being scratched.
 Peel the film off slowly, just before the use, with strict attention to electrostatic charges.
 Blow off 'dust' on the polarizer by using an ionized nitrogen.
- j) The polarizer surface on the panel is treated with Anti-Glare for low reflection. In case of attaching protective board over the LCD, be careful about the optical interface fringe etc. which degrades display quality.
- k) Do not expose the LCD panel to direct sunlight. Lightproof shade etc. should be attached when LCD panel is used under such environment.
- 1) Connect GND to 4 place of mounting holes to stabilize against EMI and external noise.
- m) There are high voltage portions on the backlight and very dangerous. Careless touch may lead to electrical shock. When exchange lamps or service, turn off the power without tail.
- n) When handling LCD modules and assembling them into cabinets, please be noted that long-terms torage in the environment of oxidization or deoxidization gas and the use of such materials as reagent, solvent, adhesive, resin, etc. which generate these gasses, may cause corrosion and discoloration of the modules.
- o) Cold cathode fluorescent lamp in LCD panel contains a small amount of mercury, please follow local ordinances or regulations for disposal.
- p) Be careful of a back light lead not to pull by force at the time of the wiring to an inverter, or line processing.
- q) When install LCD modules in the cabinet, please tighten with "torque = $0.34N^{\bullet}$ m(Max). Be sure to confirm it in the same condition as it is installed in your instrument.
- r) Liquid crystal contained in the panel may leak if the LCD is broken. Rinse it as soon as possible if it gets inside your eye or mouth by mistake.
- s) Notice:Never dismantle the module , because it will cause failure.
- t) Be careful when using it for long time with fixed pattern display as it may cause afterimage.
- u) Adjusting volume have been set optimally before shipment, so do not change any adjusted value. If adjusted value is changed, the specification may not be satisfied.
- v) If a minute particle enters in the module and adheres to an optical material, it may cause display non-uniformity issue, etc. Therefore, fine-pitch filters have to be installed to cooling and inhalation hole if you intend to install a fan.
- w) The lamp used for this product is very sensitive to the temperature. Luminance decreases rapidly when it is used for a long time or repeatedly under the environment of the low temperature or the module is being cooled. Please avoid the continuous or repeating use of it under such an environment. It may decrease up to 50% of the initial luminance in about one month under the low temperature environment. Please consult our company when it is used under the environment like the above mentioned.

11. Packing form

Piling number of cartons	4ctn
Package quantity in one carton	10pcs
Carton size(TYP)	319 (L) x374 (W) x407 (H) mm
Total mass of one carton filled	11.3 (typ.)
with full modules	
Packing form is shown	26PAGE

12 . Reliability test items

No	Test item		Conditions	
1	High temperatu	re	Ta = 50 ; 85%RH 240h	
	& high humidity operation test		(No condensation)	
2	High temperatu	re operation test	Ta = 50 , 240h	
3	High temperatu	re storage test	Ta = 60 240h	
4	Low temperatu	re operation test	Ta = 0 240H	
5	Low temperatu	re storage test	Ta = -25 240h	
6			5~100Hz,sine wave,11.76 m/s ²	
		Vibration	1minutes/cycle	
	(Non operating)	X,Y,Z direction	Fag. 1
			50 times each directions	[Note]
7	Mechanical shock		294 m/s ² 11ms	
			$\pm X$, $\pm Y$, $\pm Z$ direction	
	(non- operating)	3 times each directions	
8		ESD	150pF,150 , ± 10kV	[Note]
			9 places on a panel surface	
		(operation)	10 times each places at 1 sec interval	
9			53.3kPa(Equivalent to altitude 4,850m)	
	Low pressure	operation	0 ± 3 24h	
			50 ± 3 24h	
			15kPa(Equivalent to altitude 13,600m)	
		Non-operation	-20 ± 3 24h	
			60 ± 3 24h	

[Note]

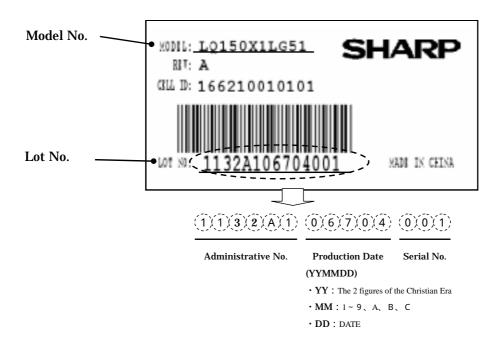

A gap of panel shall not occur by vibration or the shock.

【Result Evaluation Criteria】

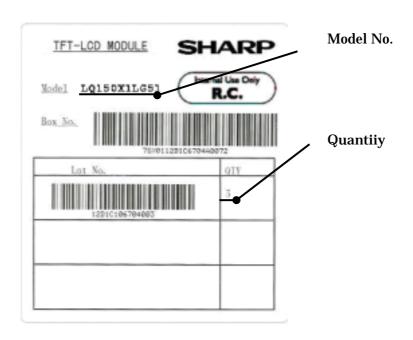

Under the display quality test conditions with normal operation state, these shall be no change which may affect practical display function. (normal operation state: Temperature: $15 \sim 35$, Humidity: $45 \sim 75\%$, Atmospheric pressure: $86 \sim 106$ kpa)

13 . Others

1) Lot No. and indication Bar C ode Label:

2) Packing box label

14. DEFECT CRITERIA

14.-1 Display specification

(Note 1, Note 2)

		Condition	<u> </u>	1, 11010 2)
Defect Pattern		Criteria		
Line defect		0 line		
		R+G+B Note 5		<=4dots
Bright dots Note 2	Close defect dots Note 7	Note 3	10mm<=D Note 6	Allowed
Note 3	Linked defect dots	D=0mm	2 defect dots	<=2 set
	Note 8	Note 6	3 defect dots or more	0 set
		R+G+B		<=4dots
Dark dots	Close defect dots		$10mm \le D$	Allowed
Note 2	Note 7	Note 6		7 Mowed
Note 4	Linked defect dots	D=0mm	2 defect dots	Note 9
	Note 8	Note 6	3 defect dots or more	0 set
Total	Brig	<=6dots		

Note 1: Inspection conditions are as follows.

Temperature	25±5
Inspection viewing distance	20cm(The distance between the inspector's eye and screen)
	$0^{\circ} <= R <= 20^{\circ}, 0^{\circ} <= L <= 20^{\circ}$
Inspection direction	0°<= U<=20°
Inspection illumination	60lx(at a display surface)

Note 2: Defect area > 1/2 of one dot

Dot defects are include intermittent bright and dark dot.

Dots darker than half brightness of full bright dots are not defined as bright dot defect, and dots brighter than half brightness of full bright dots are not defined as dark dot defect.

- Note 3: Bright dots are counted while the display is black.
- Note 4: Dark dots are counted while the display is illuminated with Red, Green or Blue.
- Note 5: Green bright dots only 3 dots
- Note 6: D is the distance between defect dots.
- Note 7: See"4.10.2 Close defect dots".
- Note 8: See"4.10.3 Linked defect dots".
- Note 9: Linked 2 Dark dots are considered as 1defect dot.

14-2 Close defect dots

Defect pattern	: Bright dot : Dark dot	Criteria
Bright dots	10mm <= D	Allowed
Dark dots	10mm <= D	Allowed
Combination between bright dot and dark dot	10mm <= D	Allowed

14-3 Linked defect dots

Defect pattern	: Bright dot : Dark dot	Criteria
		<=2set
2 defect dots		Linked 2 Dark dots are considered as 1defect dot.
	Combination between bright dotsand dark dot Etc.	<=2set

Defect pattern	: Bright dot : Dark dot	Criteria
3 defect dots	Dark dot	0 set
	Combinations between bright dot and dark dot Combinations between bright dot and dark dot Combinations between bright dot and dark dot Combinations Combi	Allowed

14-4 Appearance specifications

Defec	et pattern	Condition Note 1	Criteria
		d<0.2mm	Allowed
Impure	D (1	0.2mm<=d<=0.5mm	<=4 points
ingredient	Dot shape	d>0.5mm	
Stains		Adjacent other objects	0 point
Dust	T . 1	0.7mm <=L<=3.0mm	<=4 points
	Line shape	L>3.0mm	0 point
		d<=0.2mm	Allowed
I	Dent	0.2mm <d<=0.5mm< td=""><td><=4 points</td></d<=0.5mm<>	<=4 points
		d>0.5mm	0 point
Polariz	er scratch	L<=10.0mm	<=4 points
Non-u	niformity	There should be no non-uniformity through 3% trans	sparency of filter.

Note 1: Definition of symbols is as follows.

d: Average diameter

(This diameter is the average length of a long axis and a short axis in each defect pattern.)

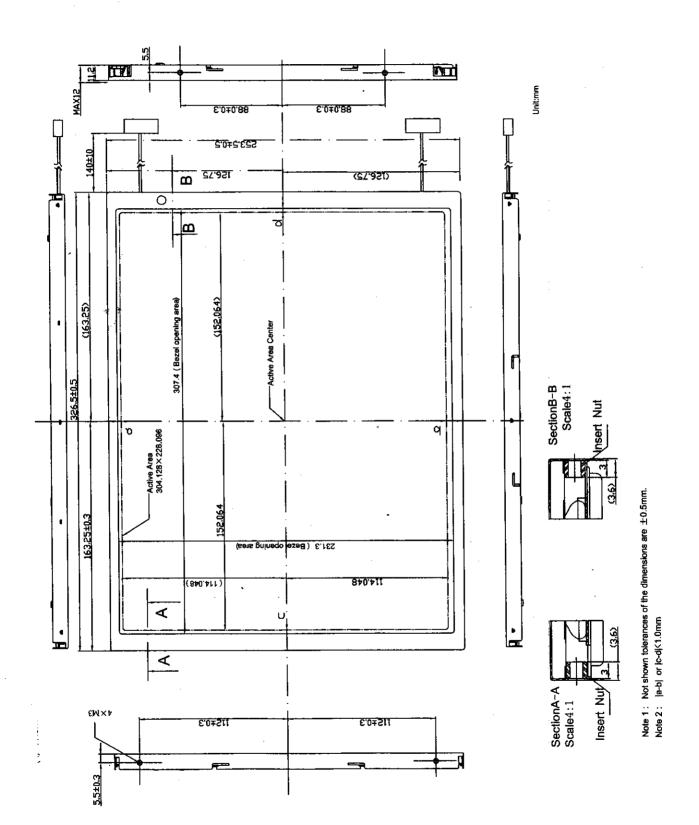

L: Length

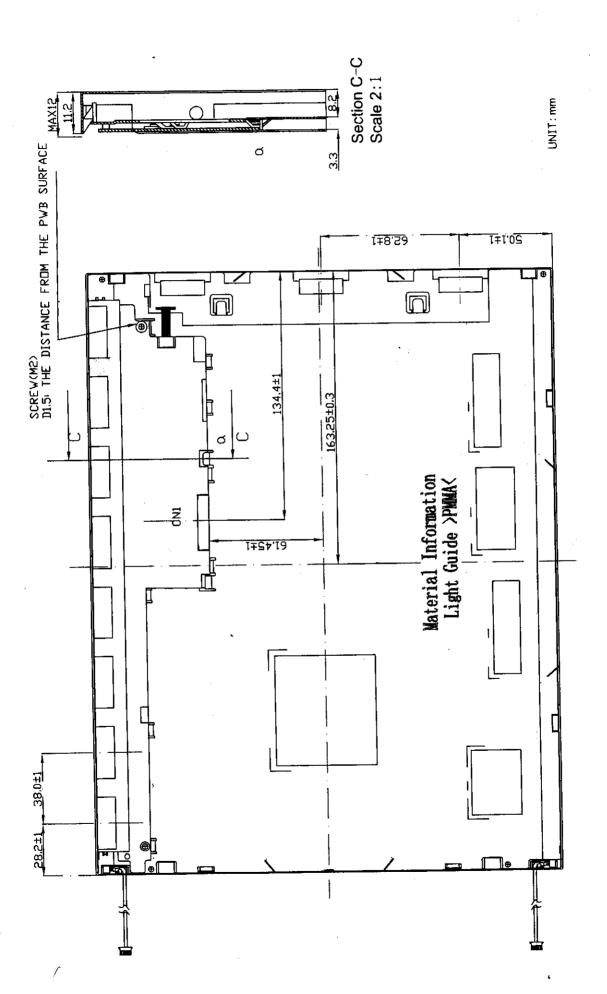

Note 2: Inspection conditions are as follows.

Temperature	25±5
Inspection viewing distance	20cm (The distance between the inspector's eye and screen.)
	$0^{\circ} <= R <= 45^{\circ}, 0^{\circ} <= L <= 45^{\circ}$
Inspection direction	0°<= U<=45°, 0°<= D<=45°
Illumination	700lx (at an inspection desk surface)

15. Outline dimensions

1) Front side

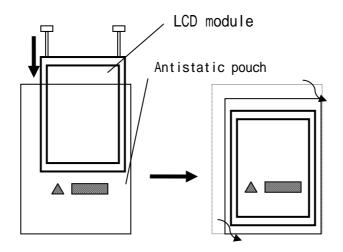

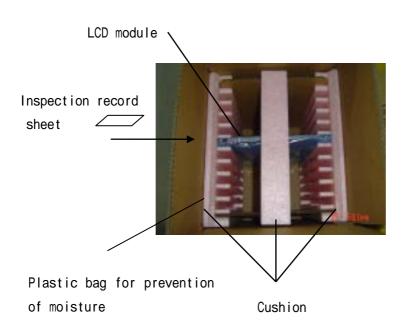

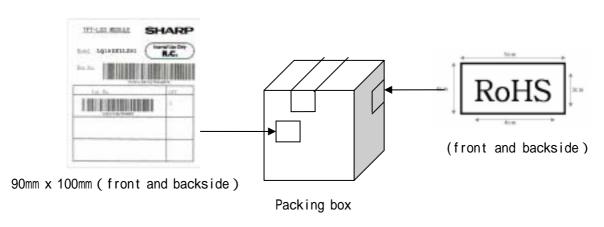

NOTE: NOT MARKED TOLERANCES IN THE FIGURE ARE ± 0.5 mm.

16. Packing box

16-1 Packing box

16-2 Pallet packing

Note: The ways for Packing and Shipping vary from different shipment volume, dependent on specific situations.

Packing boxes (9 boxes×4 tiers maximum)
