1. Application

This specification applies to the color 20.1 UXGA TFT-LCD module LQ201U1LW21.

- ⊚These specification sheets are the proprietary product of SHARP CORPORATION("SHARP) and include materials protected under copyright of SHARP. Do not reproduce or cause any third party to reproduce them in any form or by any means, electronic or mechanical, for any purpose, in whole or in part, without the express written permission of SHARP.
- The device listed in these specification sheets was designed and manufactured for use in OA equipment.
- ⊚In case of using the device for applications such as control and safety equipment for transportation(aircraft, trains, automobiles, etc.), rescue and security equipment and various safety related equipment which require higher reliability and safety, take into consideration that appropriate measures such as fail-safe functions and redundant system design should be taken.
- ⊚In case of using the device for equipment that requires an extreme level of reliability, such as aerospace applications, telecommunication equipment(trunk lines), nuclear power control equipment and medical or other equipment for life support, contact and consult with a SHARP sales representative.
- ©SHARP assumes no responsibility for any damage resulting from the use of the device which does not comply with the instructions and the precautions specified in these specification sheets.
- ©Contact and consult with a SHARP sales representative for any questions about this device.

2. Overview

This module is a color active matrix LCD module incorporating amorphous silicon TFT (Thin Film Transistor). It is composed of a color TFT-LCD panel, driver ICs, control circuit, power supply circuit and a back light unit. Graphics and texts can be displayed on a $1600 \times 3 \times 1200$ dots panel with about 16 million colors by supplying 48 bit data signals(8bit×2pixel×RGB), two display enable signals, two dot clock signals, +12V DC supply voltages for TFT-LCD panel driving and supply voltage for back light.

It is a wide viewing-angle-module (Vertical viewing angle: 176° Horizontal viewing angle: 176° ,CR \geq 10). This module performance achieve 20ms response time (full; black to white, or white to black) done by improving Liquid crystal material.

3. Mechanical Specifications

| Parameter | Specifications | Unit |
|-------------------------|--------------------------------|-------|
| Display size | 51 (Diagonal) | cm |
| | 20.1 (Diagonal) | Inch |
| Active area | 408.0 (H)×306.0 (V) | mm |
| Pixel format | 1600 (H)×1200 (V) | Pixel |
| | (1 pixel = R + G + B dots) | |
| Pixel pitch | 0.255(H)×0.255 (V) | mm |
| Pixel configuration | R,G,B vertical stripe | |
| Display mode | Normally black | |
| Unit outline dimensions | 432(W)×331.5 (H)×25 (D) | mm |
| Mass | 3.2 (Typ) | kg |
| Surface treatment | Anti-glare And hard-coating 3H | |

Outline dimensions are shown in Fig.1.

4. Input Terminals and Function

4-1. TFT-LCD panel driving

LVDS interface with 2 input signal, and +12VDC power supply, control signal

Connectors: MDF76LARW-30S-1H (HIROSE) or FI-XB30SRL-HF11 (JAE)

Corresponding connectors: FI-X30M (JAE) LVDS receiver: Contained in a control IC

Corresponding LVDS transmitter: THC63LVDM83R(Thine) or compatible

4-2 Interface block diagram

LVDS receiver: Contained in a control IC.

4-2. Back light driving

CN1, 3 (High voltage side)

The module-side connector: XHP-7 (JST) The user-side connector: S7B-XH-A (JST)

Cable: UL Style No.: 10267

rated voltage: 2kV (AC)

AWG: 26

| Pin no. | symbol | Function | Cable color |
|---------|------------------|---|-------------|
| 1 | V _{H-1} | Power supply for lamp 1 (High voltage side) | Pink |
| 2 | NC | This is electrically opened. | |
| 3 | NC | This is electrically opened. | |
| 4 | V _{H-2} | Power supply for lamp 2 (High voltage side) | Blue |
| 5 | NC | This is electrically opened. | |
| 6 | NC | This is electrically opened. | |
| 7 | V_{H-3} | Power supply for lamp 3 (High voltage side) | Orange |

CN 2,4(Low voltage side)

The module-side connector: BHR-03VS-1 (JST) The user-side connector: SM03(4.0)B-BHS-1-TB (JST)

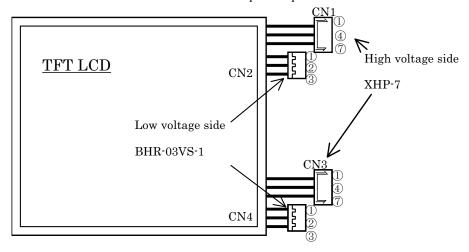

Cable: UL Style No.: 10368

rated voltage: 300V (AC)

AWG: 26

| Pin no. | symbol | Funct | Cable color | |
|---------|------------------|-------------------------|--------------------|-------|
| 1 | V _{L-1} | Power supply for lamp 1 | (Low voltage side) | White |
| 2 | V _{L-2} | Power supply for lamp 2 | (Low voltage side) | Gray |
| 3 | V _{L-3} | Power supply for lamp 3 | (Low voltage side) | Brown |

The pair of CN1 and CN2 is for the same CCFT lamps. The pair of CN3 and CN4 is in the same way.

5. Absolute Maximum Ratings

| Parameter | Symbol | Condition | Ratings | Unit | Remark |
|---------------------------------|--------|-----------|----------------|------------|---------|
| +12.0V supply voltage | Vcc | Ta=25℃ | $0 \sim +14.0$ | V | |
| Storage temperature | Tstg | ı | $-25 \sim +60$ | $^{\circ}$ | [Note1] |
| Operating temperature (Ambient) | Topa | | $0 \sim +50$ | $^{\circ}$ | |

[Note1] Humidity: 95%RH Max. ($Ta \le 40^{\circ}C$)

Maximum wet-bulb temperature at 39° C or less. (Ta> 40° C)

No condensation.

6. Electrical Characteristics

6-1. TFT-LCD panel driving ▲1

| 1. TFT-L | CD panel driving ▲1 | | | | | | $Ta=25^{\circ}C$ |
|----------|-----------------------------|-----------------|-------|-------|-------|-------|---------------------|
| | Parameter | Symbol | Min. | Тур. | Max. | Unit | Remark |
| Vcc | Supply voltage | Vcc | +10.8 | +12.0 | +13.2 | V | [Note1] |
| | Current dissipation | Icc | _ | 420 | 600 | mA | [Note2] |
| | Rush Current | | | | 3 | A | [Note3] |
| Permi | issive input ripple voltage | V_{RF} | _ | _ | 100 | mVp-p | |
| | Input voltage (Low) | $V_{\rm IL}$ | 0 | _ | +0.6 | V | SELLVDS |
| | Input voltage (High) | V_{IH} | +2.7 | _ | +3.3 | V | SELLVDS |
| | Input current (Low) | I_{IL} | _ | _ | 500 | μΑ | V _I =GND |
| | Input current (High) | I _{IH} | _ | _ | 10 | μA | V _I =Vcc |

[Note1]

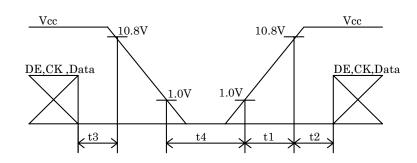

1) On-off sequences of Vcc and data

$$0 < t1 \le 60 ms$$

 $0 < t2 \le 10 \text{ms}$

 $0 \le t3 \le 1s$

 $t4 \ge 100 ms$

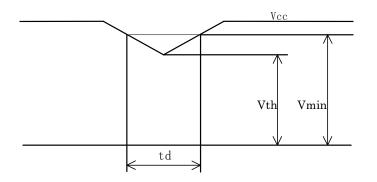

2) Dip conditions for supply voltage

Vmin, Vth=10.8V, 9.6V

- 1) Vth \leq Vcc< Vmin $td {\leq}\ 20ms$
- 2) $Vcc \le Vth$

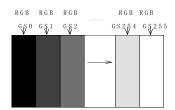

The LCD module shuts down.

[Note2] Typical current situation : 256-gray-bar pattern

The explanation of each gray scale, GS,

is described below section 8.

[Note3] The duration of rush current is about 1ms.

6-2. Back light driving

The back light system is an edge-lighting type with 6 CCFTs (Cold Cathode Fluorescent Tube).

The characteristics of the lamp are shown in the following table.

The value mentioned below is at the case of one CCFT.

CCFT Model Name: KTBE222MSTF-421MA77-Z(STANLEY.ELECTRIC.CO., LTD)

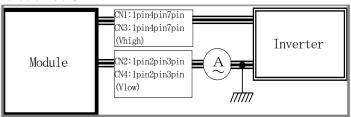

| Parameter | Symbol | Min. | Тур. | Max. | Unit | Remark |
|------------------------|---------|--------|------|------|-------|---|
| Lamp current range | I_L | 3 | 6 | 7 | mArms | [Note1] |
| Lamp voltage | V_{L} | | 800 | 900 | Vrms | $Ta=25^{\circ}C$ $I_L=6.0$ m A_{rms} $F_L=60$ kHz |
| Lamp power consumption | P_{L} | | 4.8 | 5.4 | W | [Note2] I_L =6.0m A_{rms} F_L =60kHz |
| Lamp frequency | F_L | 35 | 60 | 70 | KHz | [Note3] |
| Kick-off voltage | Vs | | | 1800 | Vrms | Ta=25°C【Note4】 |
| | | | | 2000 | Vrms | Ta=0°C [Note4] |
| Lamp life time | TL | 50,000 | | | Hour | [Note5] |

[Note1] A lamp can be light in the range of lamp current shown above.

Maximum rating for current is measured by high frequency current measurement equipment connected to V_{LOW} at circuit showed below.

(Note: To keep enough kick-off voltage and necessary steady voltage for CCFT.)

Lamp frequency : $35\sim70$ kHz Ambient temperature : $0\sim50$ °C

- [Note2] Referential data per one CCFT by calculation ($I_L~\times~V_{L\,1}$.
 - The data doesn't include loss at inverter.
- [Note3] Lamp frequency of inverter may produce interference with horizontal synchronous frequency, and this may cause horizontal beat on the display. Therefore, adjust lamp frequency, and keep inverter as far as from module or use electronic shielding between inverter and module to avoid interference.
- [Note4] It is defined at 27pF for the ballast capacitor of a DC-AC inveter.

The Kick-off voltage may rise up in the user set, please decide the open output voltage by checking not to occur lighting failure under operating state.

The open output voltage should be applied to the lamp for more than 1 second to startup. Or when the ambient luminance around the lamp is more than 1lux, it should be applied to the lamp for more than 100ms. Otherwise the lamp may not be turned on..

- [Note5] Lamp life time is defined as the time when either 1 or 2 occurs in the continuous operation under the condition of Ta=25°C and IL=6.0 mArms .
 - ① Brightness becomes 50% of the original value under standard condition.
 - ② Kick-off voltage at Ta=0°C exceeds maximum value,2000Vrms.

≪Note≫

The performance of the backlight, for example lifetime or brightness, is much influenced by the characteristics of the DC-AC inverter for the lamp. When you design or order the inverter, please make sure that a poor lighting caused by the mismatch of the backlight and the inverter (miss-lighting, flicker, etc.) never occurs. When you confirm it, the module should be operated in the same condition as it is installed in your instrument.

Use the lamp inverter power source incorporating such safeguard as overvoltage / overcurrent protective circuit or lamp voltage waveform detection circuit, which should have individual control of each lamp.

In case one circuit without such individual control is connected to more than two lamps, excessive current may flow into one lamp when the other one is not in operation.

Synchronize frequency and phase of CCFT in the same connector. Otherwise it may exceed rated voltage of connector.

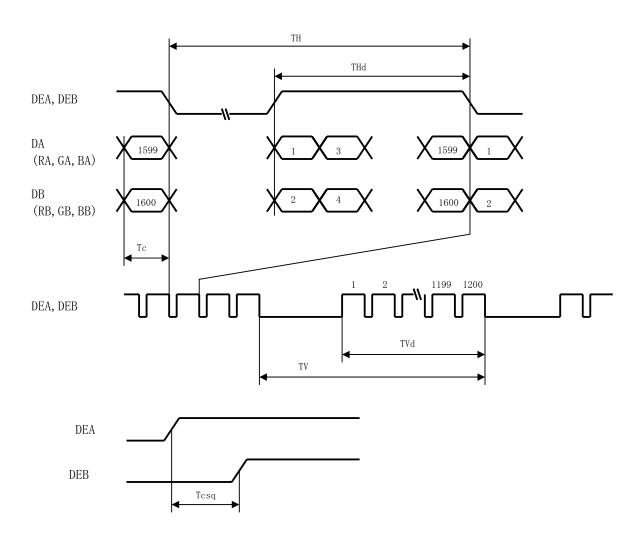

7. Timing characteristics of input signals

7-1. Timing characteristics

| | Parameter | Symbol | Min. | Тур. | Max. | Unit | Remark |
|-------------|--------------------------|--------|------|------|------|-------|---------|
| Clock | Frequency | 1/Tc | 60.0 | 81.0 | 85.0 | MHz | |
| | Skew | Tesq | -4 | 0 | 4 | ns | [Note1] |
| Data enable | Horizontal period | TH | 830 | 1080 | 1317 | clock | |
| signal | | | 10.0 | 13.3 | 15.5 | μs | |
| | Horizontal period (High) | THd | 800 | 800 | 800 | clock | |
| | Vertical period | TV | 1205 | 1250 | 2000 | line | [Note2] |
| | | | 12.1 | 16.7 | _ | ms | |
| | Vertical period (High) | TVd | 1200 | 1200 | 1200 | line | |

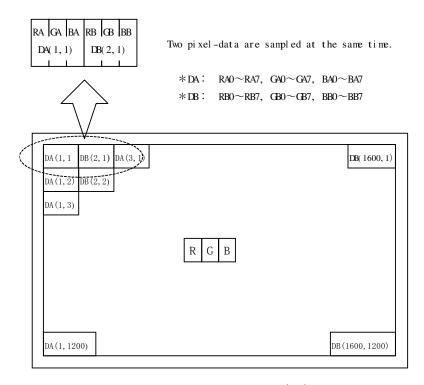

[Note1] Lvds (A port)– Lvds (B port) phase difference

[Note2] In case of using the long vertical period, the deterioration of display quality, flicker etc. may occur.

7-2 Input Data Signals and Display Position on the screen

Graphics and texts can be displayed on a $1600 \times 3 \times 1200$ dots panel with 16M colors by supplying 48 bit data signal (8bit/color [256 gray scales] $\times 3 \times 2$ pixels).

Display position of input data (H, V)

8. Input Signals, Basic Display Colors and Gray Scale of Each Color

0: Low level voltage,

1: High level voltage.

Each basic color can be displayed in 256 gray scales from 8 bit data signals. According to the combination of total 48 bit data signals, the 16-million-color display can be achieved on the screen.

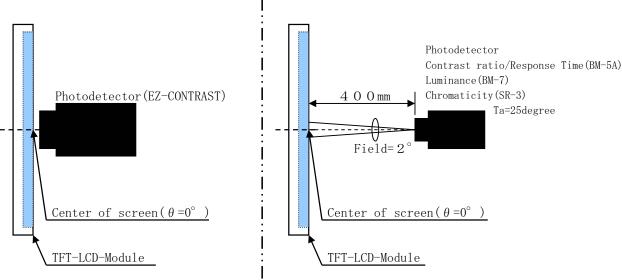

9. Optical Characteristics

 $Ta=25^{\circ}C$, Vcc=+12V

| | | | | | | | | [Note4] |
| White U | Iniformity | δw | | = | | 1.25 | | [Note5] |

^{*}The measurement shall be executed 30 minutes after lighting at rating.

The optical characteristics shall be measured in a dark room or equivalent state with the method shown in Fig.2 below.

 ${\it Fig2-1}$ Viewing angle measurement method

: Fig2-2 Luminance/Contrast ratio/Response time/Chromaticity measurement method

Fig2 Optical characteristics measurement method

[Note1] Definitions of viewing angle range:

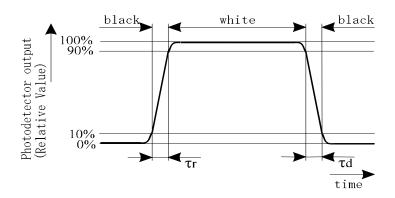

[Note2] Definition of contrast ratio:

The contrast ratio is defined as the following.

[Note3] Definition of response time:

The response time is defined as the following figure and shall be measured by switching the input signal for "black" and "white".

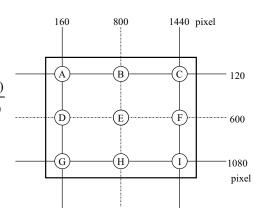

[Note4] This shall be measured at center of the screen.

[Note5] Definition of white uniformity:

White uniformity is defined as the following with nine measurements. (A \sim I).

 $\delta w = \frac{\text{Maximum Luminance of nine points (brightness)}}{\text{Minimum Luminance of nine points (brightness)}}$

10. Handling Precautions

- a) Be sure to turn off the power supply when inserting or disconnecting the cable.
- b) Be sure to design the cabinet so that the module can be installed without any extra stress such as warp or twist.
- c) Since the front polarize is easily damaged, pay attention not to scratch it.
- d) Since long contact with water may cause discoloration or spots, wipe off water drop immediately.
- e) When the panel surface is soiled, wipe it with absorbent cotton or other soft cloth.
- f) Since the panel is made of glass, it may break or crack if dropped or bumped on hard surface. Handle with care.
- g) Since CMOS LSI is used in this module, take care of static electricity and take the human earth into consideration when handling.
- h) Make sure the mounting holes of the module are grounded sufficiently. Take electro-magnetic interference (EMI) into consideration.
- i) The module has some printed circuit boards (PCBs) on the back side. Take care to keep them form any stress or pressure when handling or installing the module; otherwise some of electronic parts on the PCBs may be damaged.
- j) Observe all other precautionary requirements in handling components.
- k) When some pressure is added onto the module from rear side constantly, it causes display non-uniformity issue, functional defect, etc. So, please avoid such design.
- If the stress is applied onto the panel under operating conditions, display defects such as black dots may occur. So, do not press the display with fingers.

To recover this defect, turn off the power supply and restart after several seconds.

11. Packing form

- a) Piling number of cartons: maximum 8 cartons
- b) Packing quantity in one carton: 2 modules
- c) Carton size : 583mm(W) $\times 478$ mm(H) $\times 215$ mm(D)
- d) Total mass of one carton filled with full modules: 8.9kg

12. Reliability test items

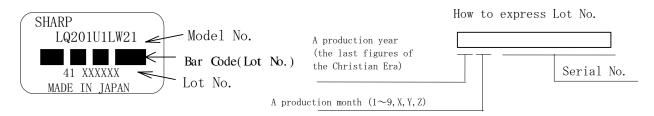

| No. | Test item | Conditions | | | | | |
|-----|------------------------------------|---|--|--|--|--|--|
| 1 | High temperature storage test | Ta=60°C 240h | | | | | |
| 2 | Low temperature storage test | Ta=-25°C 240h | | | | | |
| | High temperature | Ta=40°C ; 95%RH 240h | | | | | |
| 3 | & high humidity operation test | (No condensation) | | | | | |
| 4 | High tames another an austice test | Ta=50°C 240h | | | | | |
| | High temperature operation test | (The panel temp. must be less than 60°C) | | | | | |
| 5 | Low temperature operation test | Ta=0°C 240H | | | | | |
| 6 | | Waveform : Sine wave | | | | | |
| | | Frequency: 10 ~ 57Hz/Vibration width (one side): 0.075mm | | | | | |
| | Vibration test | : $58 \sim 500$ Hz/Gravity : 9.8 m/s ² | | | | | |
| | (non- operating) | Sweep time: 11minutes | | | | | |
| | | Test period : 3 hours | | | | | |
| | | (1 hour for each direction of X,Y,Z) | | | | | |
| | | Max. gravity : 490m/s ² | | | | | |
| 7 | Shock test | Pulse width: 11ms, sine wave | | | | | |
| | (non- operating) | Direction : $\pm X$, $\pm Y$, $\pm Z$, | | | | | |
| | | once for each direction. | | | | | |
| 8 | Thermal shock test | Ta=-20°C~60°C; 5 cycles | | | | | |
| | Altitude | Test period: 10 hours (1 hour for each temperature) $Ta=50^{\circ}C, 70kPa, 3,048m (10,000ft), t=24h (Operating)$ | | | | | |
| 9 | | Ta=70°C, 12kPa, 15,240m (50,000ft), t=24h (Storage) | | | | | |

[Result Evaluation Criteria]

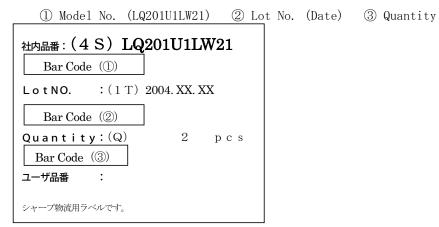

Under the display quality test conditions with normal operation state, these shall be no change which may affect practical display function.

13. Others

1) Lot No. and indication Bar Code Label:

2) Packing Label

- 3) Adjusting volume have been set optimally before shipment, so do not change any adjusted value. If adjusted value is changed, the specification may not be satisfied.
- 4) Disassembling the module can cause permanent damage and should be strictly avoided.
- 5) Please be careful since image retention may occur when a fixed pattern is displayed for a long time.
- 6) The chemical compound that causes the destruction of ozone layer is not being used.
- 7) Warning of mercury and material information of LPG(Light Pipe Guide) are labeled on the back of the module.

- 9) This specification document's Japanese language version is also available. Its Number (SPEC. No.) is LD-16111
- 10) When any question or issue occurs, it shall be solved by mutual discussion.

14. Carton storage condition

Temperature 0°C to 40°C Humidity 95%RH or less

Reference condition: 20°C to 35°C, 85%RH or less (summer)

: 5° C to 15° C , 85%RH or less (winter)

• the total storage time $(40^{\circ}\text{C},95\%\text{RH})$: 240H or less

Sunlight Be sure to shelter a product from the direct sunlight.

Atmosphere Harmful gas, such as acid and alkali which bites electronic components and/or

wires, must not be detected.

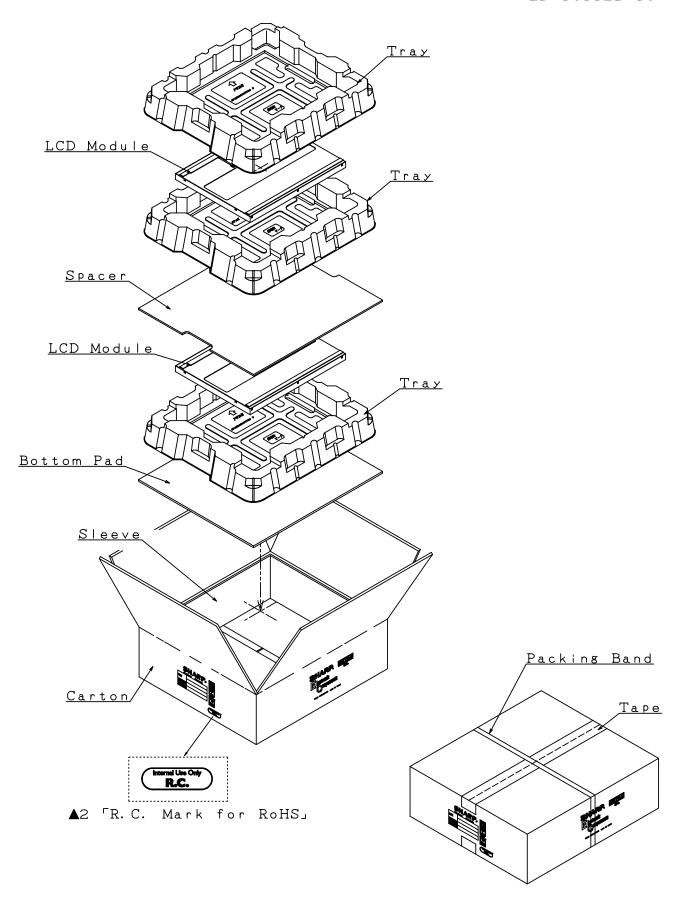

Notes Be sure to put cartons on palette or base, don't put it on floor, and store them with

removing from wall.

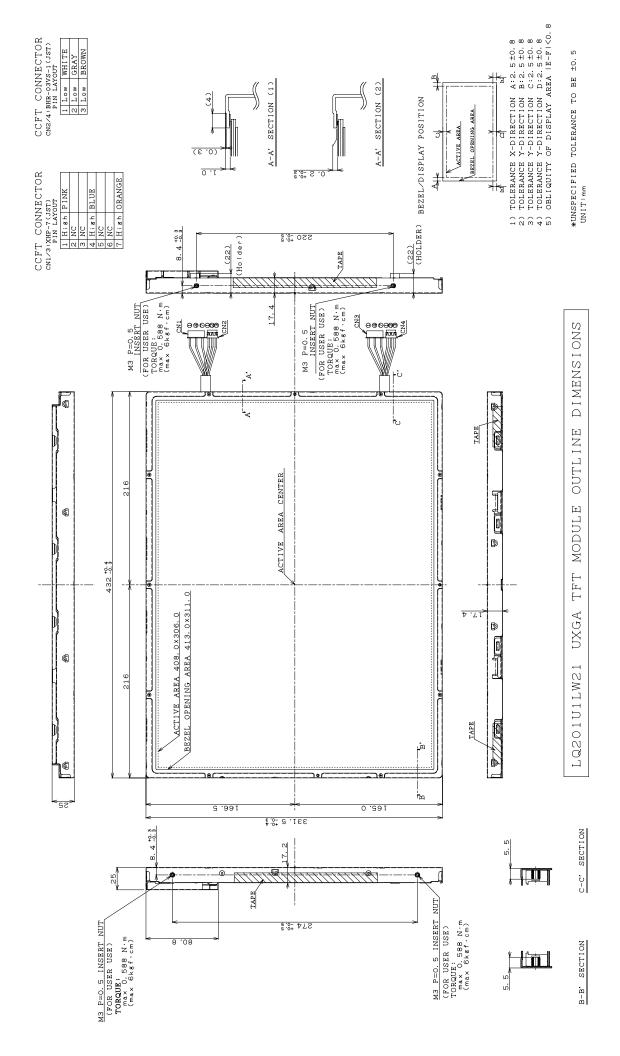

Please take care of ventilation in storehouse and around cartons, and control

changing temperature is within limits of natural environment.

Storage period 1 year

This publication is the proprietary of SHARP and is copyrighted, with all rights reserved. Under the copyright laws, no part of this publication may be reproduced or transmitted in any form or by any means, electronic or mechanical for any purpose, in whole or in part, without the express written permission of SHARP Express written permission is also required before any use of this publication may be made by a third party.

The application circuit examples in this publication are provided to explain the representative applications of SHARP's devices and are not intended to guarantee any circuit design or permit any industrial property right or other rights to be executed. SHARP takes no responsibility for any problems related to any industrial property right or a third party resulting from the use of SHARP's devices, except for those resulting directly from device manufacturing processes.

In the absence of confirmation by device specification sheets, SHARP takes no responsibility for any defects that occur in equipment using any of SHARP's devices, shown in catalogs, data books, etc. Contact SHARP in order to obtain the latest device specification sheets before using any SHARP's device.

SHARP reserves the right to make changes in the specifications, characteristics, data, materials, structures and other contents described herein at any time without notice in order to improve design or reliability. Contact SHARP in order to obtain the latest specification sheets before using any SHARP's device. Manufacturing locations are also subject to change without notice.

Observe the following points when using any device in this publication. SHARP takes no responsibility for damage caused by improper use *of the devices*.

The appropriate design measures should be taken to ensure reliability and safety when SHARP's devices are used for equipment such as:

- Transportation control and safety equipment (i.e., aircraft, trains, automobiles, etc.)
- Traffic signals

- Gas leakage sensor breakers
- Alarm equipment
- Various safety devices etc.

SHARP's devices shall not be used for equipment that requires extremely high level of reliability, such as:

- Military and space applications
- Nuclear power control equipment
- Medical equipment for life support

Contact a SHARP representative, in advance, when intending to use SHARP's devices for any "specific" applications other than those recommended by SHARP.

Contact and consult with a SHARP representative if there are any questions about the contents of this publication.

SPECIFICATIONS ARE SUBJECT TO CHANGE WITHOUT NOTICE.

Suggested applications (if any) are for standard use; See Important Restrictions for limitations on special applications. See Limited Warranty for SHARP's product warranty. The Limited Warranty is in lieu, and exclusive of, all other warranties, express or implied. ALL EXPRESS AND IMPLIED WARRANTIES, INCLUDING THE WARRANTIES OF MERCHANTABILITY, FITNESS FOR USE AND FITNESS FOR A PARTICULAR PURPOSE, ARE SPECIFICALLY EXCLUDED. In no event will SHARP be liable, or in any way responsible, for any incidental or consequential economic or property damage.
