NOTICE

This publication is the proprietary of SHARP and is copyrighted, with all rights reserved. Under the copyright laws, no part of this publication may be reproduced or transmitted in any form or by any means, electronic or mechanical for any purpose, in whole or in part, without the express written permission of SHARP. Express written permission is also required before any use of this publication may be made by a third party.

The application circuit examples in this publication are provided to explain the representative applications of SHARP's devices and are not intended to guarantee any circuit design or permit any industrial property right or other rights to be executed. SHARP takes no responsibility for any problems related to any industrial property right or a third party resulting from the use of SHARP's devices, except for those resulting directly from device manufacturing processes.

In the absence of confirmation by device specification sheets, SHARP takes no responsibility for any defects that occur in equipment using any of SHARP's devices, shown in catalogs, data books, etc. Contact SHARP in order to obtain the latest device specification sheets before using any SHARP's device.

SHARP reserves the right to make changes in the specifications, characteristics, data, materials, structures and other contents described herein at any time without notice in order to improve design or reliability. Contact SHARP in order to obtain the latest specification sheets before using any SHARP's device. Manufacturing locations are also subject to change without notice.

Observe the following points when using any device in this publication. SHARP takes no responsibility for damage caused by improper use of the devices.

The devices in this publication are designed for use in general electronic equipment designs, such as:

- Personal computers
 Office automation
 Telecommunication equipment
- Test and measurement equipment Industrial control
- Audio visual and multimedia equipment Consumer electronics

The appropriate design measures should be taken to ensure reliability and safety when SHARP's devices are used for equipment such as:

- Transportation control and safety equipment(i.e., aircraft, trains, automobiles, etc.)
- Traffic signals
 Gas leakage sensor breakers
- Alarm equipment Various safety devices etc.

SHARP's devices shall not be used for equipment that requires extremely high level of reliability, such as:

- Military and space applications
 Nuclear power control equipment
- Medical equipment for life support

Contact a SHARP representative, in advance, when intending to use SHARP's devices for any "specific" applications other than those recommended by SHARP.

Contact and consult with a SHARP representative if there are any questions about the contents of this publication.

(1) Application

This literature applies to LS020B8UD**.

(2) Overview

This module is a color reflective and active matrix LCD module incorporating CG silicon TFT (Thin Film Transistor), named AD-TFT(Advanced TFT). It is composed of a color TFT-LCD panel, driver ICs, an FPC, a back light and a back sealed casing.

Graphics and texts can be displayed on a $176 \times 3 \times 220$ dots panel with 65,536 colors by supplying.

Optimum view angle is (1:30 o'clock). An inverted display mode is selective in the vertical and the horizontal direction.

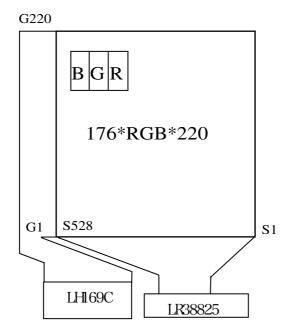

(3) Mechanical specifications

Table 1			
Parameter	Specifications	Units	Remarks
Screen size (Diagonal)	6.65 [2.0"] Diagonal	cm	
Display active area	31.68 (H) ×39.60 (V)	mm	
Pixel format	176(H)×220(V)	pixels	
	(1 pixel = R+G+B dots)		
Pixel pitch	0.060 (H) ×0.180 (V)	mm	
Pixel configuration	R,G,B vertical stripe	_	
Unit outline dimension	39.0(W)×51.6(H)×3.3 (D)	mm	[Note3-1]
Mass	9.7	g	(TYP.)
Surface hardness	3H	_	

[Note 3-1]

Excluding protrusion. For detailed measurements and tolerances, please refer to Fig. 1.

(4)Pixel configuration

(5)Input/Output terminal

[Note 7-3] Calculated reference value(IL(TYP)×(VL1-VL2))

7-2)Power consumption

Table 6							
Parameter	Symbol	Conditions	MIN	ТҮР	MAX	Unit	
	Pd1	VDD=3.0V	-	10	20	mW	ſ
Current consumption	PD2	VEE=3.3V	-	60	120	μW	ſ

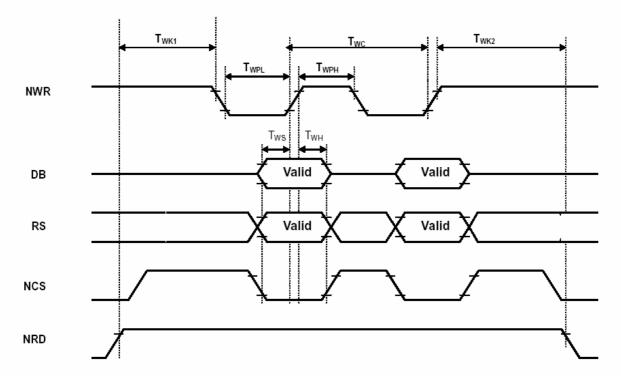

VSS=0V

[Note 7-4] Measurement Conditions

frame frequency= 60 Hz No Host CPU access, 65k-color mode Grayscale pattern [Note 7-5] Measurement Conditions Stand-by mode (Oscillasion OFF/ Display OFF) No Host CPU access 4.7V applied to 3 LED's in series.

7-3) Timing diagrams of input signals(80-family MPU access)

a)Write timing

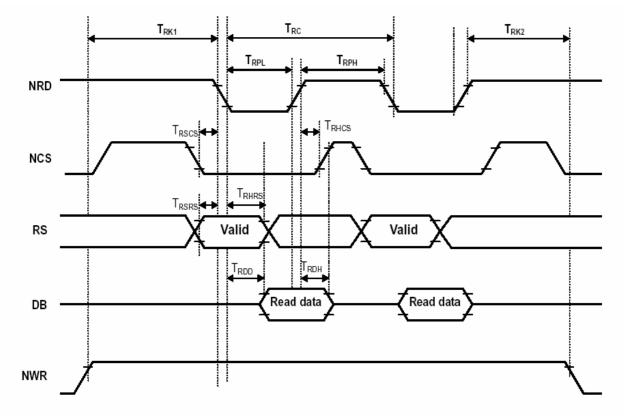

Symbol	Description	Min.	Max.	Note
T _{WPL}	Low period of NWR	60 ns	-	
T _{WPH}	HIgh period of NWR	80 ns	-	
T _{wc}	Prohibit time re-writing	140 ns	-	
Tws	Set up time of DB, RS and NCS to the NWR rising.	50 ns	-	
T _{WH}	Hold time of DB, RS and NCS to the NWR rising.	0 ns	-	
T _{WK1} Required time from the read cycle to write cycle		300 ns	-	
Т _{wк2}	Required time from the write cycle to read cycle	300 ns	-	

Condition: VEE=3.0V, Ta= $25^{\circ}C$

Note)All timing is rated on 10 on 90 % of VEE voltage.

Fig 1-a Interface timing chart(write)

a)Read timing

Symbol	Description	Min.	Max.
T _{RPL}	Low period of NRD	100ns	-
T _{RPH}	HIgh period of NRD	100ns	-
T _{RC}	Prohibition time for re-reading	200ns	
T _{RSRS}	Set up time of RS to NRD falling	50ns	-
T _{RSCS}	Set up time of NCS to NRD falling	50ns	-
T _{RHRS}	Hold time of RS from NRD falling	50ns	-
T _{RHCS}	Hold time of NCS from NRD rising	50ns	-
T _{RDD}	T _{RDD} Time from NRD falling to confirmation of DB output		80ns
T _{rdh}	Time from NRD rising to confirmation of DB output	5ns	-

Condition: VEE=3.0V , Ta= $25^{\circ}C$

Note) All timing is rated on 10 on 90 % of VEE voltage.

Fig 1-b Interface timing chart(read)

* The measuring method of the optical characteristics is shown by the following figure.

* A measurement device is TOPCON luminance meter BM-3(A).(Viewing cone 1)

Photodetector(including luminosity facter)

[Note 9-1] Viewing angle range is defined as follows.

Definition for viewing angle

[Note 9-2] Definition of contrast ratio:

The contrast ratio is defined as follows:

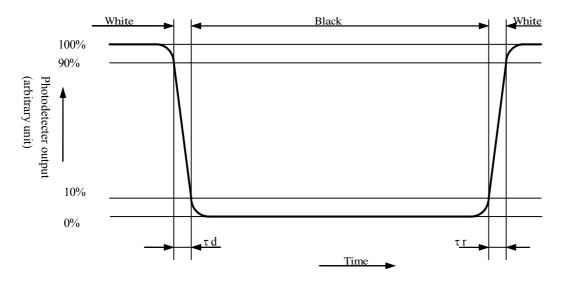

Photodetecter output with all pixels white(GS63)

Contrast ratio(CR)=

Photodetecter output with all pixels black(GS0)

[Note 9-3] Definition of response time:

The response time is defined as the following figure and shall be measured by switching the input signal for "black" and "white".

[Note 9-4] A measurement device is Minolta CM-2002.

[Note 9-5] Definition of reflection ratio

Reflection ratio =

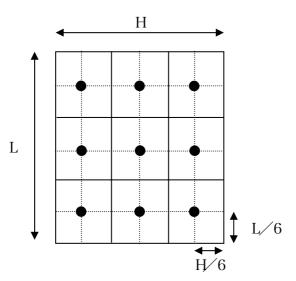

Light detected level of the reflection by the LCD module

Light detected level of the reflection by the standard white board

[Note 9-6] Definition of Uniformity

Uniformity = $\frac{\text{Minimum brightness}}{\text{Maximum brightness}} \times 100(\%)$

The brightness should be measured on 9spots of the display as follows.

(10)Display quality

The display quality of the color TFT-LCD module shall be in compliance with the Incoming Inspection Standards for TFT-LCD.

(11)Mechanical characteristics

11-1) External appearance

See Fig. 1

- 11-2) FPC (for LCD panel) characteristics
 - (1)Specific connector

FF14-32A-R13B (DDK)

(2)Bending endurance of the bending slits portion

No line of the FPC is broken for the bending test (Bending radius=0.6mm and angle=90°) in 30 cycles.

(12)Handling Precautions

12-1) Insertion and taking out of FPCs

Be sure insert and take out of the FPC into the connector of the set after turning off the power supply on the set side.

12-2) Handling of FPCs

The FPC for LCD panel shall be bent only slit portion. The bending slit shall be bent uniformly on the whole slit portion with bending radius larger than 0.6mm ,and only inner side (back side of the module). Don't bend it outer side (display surface side).

Don't give the FPCs too large force, for example, hanging the module with holding FPC.

12-3) Installation of the module

On mounting the module, be sure to fix the module on the same plane. Taking care not to warp or twist the module.

12-4) Precaution when mounting

(1) If water droplets and oil attaches to it for a long time, discoloration and staining occurs. Wipe them off immediately.

(2) Glass is used for the TFT-LCD panel. If it is dropped or bumped against a hard object,

it may be broken. Handle it with sufficient care.

(3)As the CMOS IC is used in this module, pay attention to static electricity when handling it.

Take a measure for grounding on the human body.

- 12-5) Others
 - (1) The liquid-crystal is deteriorated by ultraviolet rays. Do not leave it in direct sunlight and strong ultraviolet rays for many hours.
 - (2) If it is kept at a temperature below the rated storage temperature, it becomes coagulated and the panel may be broken. Also, if it is kept at a temperature above the rated storage temperature, it becomes isotropic liquid and does not return to its original state. Therefore, it is desirable to keep it at room temperature as much as possible.
 - (3) If the LCD breaks, don't put internal liquid crystal into the mouth. When the liquid crystal sticks to the hands, feet and clothes, wash it out immediately.
 - (4) Wipe off water drop or finger grease immediately. Long contact with water may cause discoloration or spots.
 - (5) Observe general precautions for all electronic components.

Table	12			
No.	Test items	Test conditions		
1	High temperature storage test	Ta=+70°C	240h	
2	Low temperature storage test	Ta=-20°C	240h	
3	High temperature and high humidity operating test	Tp=+40°C, 95%RH (But no condensation of dew)	240h	
4	High temperature operating test	Tp=+60°C	240h	
5	Low temperature operating test	Tp=-10°C	240h	
6	Electro static discharge test	$\pm 200 \text{V} \cdot 200 \text{pF}(0\Omega)$ 1 time for each	h terminals	
7	Shock test	980 m/s ² , 6 ms $\pm X, \pm Y, \pm Z$ 3 times for each direct (JIS C0041, A-7 Condition		
8	Vibration test	Frequency range: 10Hz~55Hz Stroke: 1.5 mm Sweep: 10Hz~55Hz X,Y,Z 2 hours for each direction (total 6 hours) (JIS C0040,A-10 Condition A)		
9	Heat shock test	$Ta=-20^{\circ}C \rightarrow +70^{\circ}C / 50cycl(1h) (1h)$,	

(13) Reliability Test Conditions for TFT-LCD Module

Table 12

[Note] Ta = Ambient temperature, Tp = Panel temperature

[Check items] Test No.1 \sim 9 : In the standard condition, there shall be no practical problems that may affect the display function.

(14) Others

- 14-1) Indication of lot number
- The lot number is shown on a label. Attached location is shown in Fig.1 (Outline Dimensions).

Indicated contents of the label

14-2) Used Regulation of Chemical Substances Breaking Ozone Stratum

Substances with the object of regulating : CFCS, Carbon tetrachloride, Halon

1,1,1-Trichloro ethane (Methyl chloroform)

- (a) This LCD module, Constructed part and Parts don't contain the above substances.
- (b) This LCD module, Constructed part and Parts don't contain the above substances in processes of manufacture.
- 14-3) If some problems arise about mentioned items in this document and other items, the user of the TFT-LCD module and Sharp will cooperate and make efforts to solve the problems with mutual respect and good will.

(15) Forwarding form

- a) Piling number of cartons : 8 deep
- b) Package quantity in one cartons : 200(pcs)
- c) Carton size : (w) $525 \times (D) 360 \times (H) 225$ (mm)
- d) Total mass of 1 carton filled with full modules : approximately 5.8 (Kg)

Conditions for storage

Environment

(1)Temperature	: 0~40°C
(2)Humidity	: 60%RH or less (at 40°C)
	No dew condensation at low temperature and high humidity.
(3)Atmosphere	: Harmful gas, such as acid or alkali which bites electronic
	components and/or wires, must not be detected.
(4)Period	: about 3 months
(5)Opening of the package	: In order to prevent the LCD module from breakdown by
	electrostatic charges, please control the room humidity
	over 50%RH and open the package taking sufficient
	countermeasures against electrostatic charges, such as
	earth, etc.
