SHARF	RECORD	S OF REVISIO	N
DATE	REF.PAGE PARAGRAPH DRAWING No.	REVISED No.	SUMMARY
5 <sup>th</sup> November, 2009	Page7, Table3-1	1.0	To add weight value
5 <sup>th</sup> November, 2009	Page13, Table6-4	1.0	To modify power consumption Typical value of Condition1 and Condition 2
27 <sup>th</sup> April, 2010	Page13, Table6-4	2.0	Updated power consumption Typical value of Condition1 and Condition 2
	Page 18, 6-5-5 COM Inversion	2.0	In EXTMODE=H, the explanation for driving has been changed.
	Page20, Table7-1	2.0	Updated optical characteristics (Reflection Ratio, Panel Surface Chromaticity)
	Page26, 11-2 Package Storing	2.0	"Number of carton in a stock" and "Number of quantity of unit in carton" have been changed.
	Page26, 11-3Package Storing	2.0	Packaging drawing has been changed.

# NOTICE

#### <<Precautions>>

• These specification sheets are the proprietary product of SHARP CORPORATION ("SHARP") and include materials protected under copyright of SHARP. Do not reproduce or cause any third party to reproduce them in any form or by any means, electronic or mechanical, for any purpose, in whole or in part, without the express written permission of SHARP.

The application examples in these specification sheets are provided to explain the representative applications of the device and are not intended to guarantee any industrial property right or other rights or license you to use them.
 SHARP assumes no responsibility for any problems related to any industrial property right of a third party resulting from the use of the device.

 SHARP reserves the right to make changes in the specifications, characteristics, data, materials, structures and other contents described herein at any time without notice in order to improve design or reliability. Contact SHARP in order to obtain the latest specification sheets before using any SHARP's device. Manufacturing locations are also subject to change without notice.

Observe the following points when in using any device in this publication. SHARP takes no responsibility for damage caused by improper use of the devices.

The devices in this publication are designed for use in general electronic equipment designs, such as:

- Personal computers
   Office automation
- Telecommunication equipment
- Test and measurement equipment
- Industrial control
- Audio visual and multimedia equipment
   Consumer electronics

The appropriate design measures should be taken to ensure reliability and safety when SHARP's devices are used for equipment such as:

- Transportation control and safety equipment(i.e.,aircraft,trains,automobiles,etc.)
- Traffic signals
   Gas leakage sensor breakers
- Alarm equipment
   Various safety devices etc.

• SHARP's devices shall not be used for equipment that requires extremely high level of reliability, such as:

- Military and space applications
   Nuclear power control equipment
- Medical equipment for life support

 SHARP assumes no responsibility for any damage resulting from the use of the device which does not comply with the instructions and the precautions specified in these specification sheets.

 $\circ$  Contact and consult with a SHARP sales representative for any questions about this device.

# [For handling and system design]

(1) Handle with care as glass is used in this LCD panel. Dropping or contact against hard object may cause cracks or chips.

(2) Be careful to handle this LCD panel in order to avoid injury yourself by panel's edge as this panel is made of glass and might be a sharp edge.

(3) Do not scratch the surface of the UV protection film as it is easily damaged.

(4) Water droplets on the UV protection film must be wiped off immediately as they may cause color changes, or other defects if remained for a long time.

(5)Do not leave the LCD panel in direct sun or under ultraviolet ray.

(6) To clean LCD panel surface, wipe clean with absorbent cotton or soft cloth. If further cleaning is needed, use IPA (isopropyl alcohol) and wipe clean lightly on surface only. Do not use organic solvents as it may damage the LCD panel terminal area which uses organic material. Also, do not directly touch with finger. When the terminals cleaning are needed, those should be wiped by a soft cloth or a cotton swab without directly touching by hand.

(7) Do not expose gate driver, etc. on the panel (circuit area outside panel display area) to light as it may not operate properly. Design that shields gate driver, etc. from light is required when mounting the LCD module.

(8) To avoid circuit failure, do not touch panel terminal area.

(9) Support for the LCD panel should be carefully designed to avoid stress that exceeds specification on glass surface.(10) When handling LCD module and assembling them into cabinets, be noted that storage in the environment of oxidization or deoxidization gas and the use of such materials as reagent, solvent, adhesive, resin, and etc. which

generate these gasses, may cause corrosion and discoloration of LCD modules.

(11)To avoid picture uniformity failure, do not put a seal or an adhesive material on the panel surface.

(12) Do not use chloroprene rubber as it generates chlorine gas and affects reliability in LCD panel connective area.

(13) Protective film is attached to the surface of UV protection film on LCD panel to prevent scratches or other damages. Remove this protective film before use. In addition, do not attach the protective film which is removed from LCD module again. When the LCD panel which has the reattached protective film is needed to storage for a long time, the UV protection film might have a damage with picture quality failure.

(14) Panel is susceptible to mechanical stress and such stress may affect the display. Place the panel on flat surface to avoid stress caused by twist, bend, etc.

(15) When transporting LCD panels, secure them in LCD panel tray to avoid mechanical stress. The tray should be conductive to protect LCD panels from static charge.

Material used in set or epoxy resin (amine type hardening agent) from packaging, and silicon adhesive (dealcoholized or oxime) all release gas which may affect quality of UV protection film. Do confirm compatibility with user materials.

(16) As this LCD module is composed electronic circuits, it is sensitive to electrostatic discharge of 200V or more.Handle with care using cautions for the followings:

Operators

Operators must wear anti-static wears to prevent electrostatic charge up to and discharge from human body.

#### • Equipment and containers

Process equipment such as conveyer, soldering iron, working bench and containers may possibly generate electrostatic charge up and discharge. Equipment must be grounded through 100Mohms resistance. Use ion blower.

Floor

Floor plays an important role in leaking static electricity generated in human body or equipment. If the floor is made of insulated material (such as polymer or rubber material), such static electricity may charge. Proper measure should be taken to avoid static electricity charge (electrostatic earth: 100Mohms). There is a possibility that the static electricity is charged to them without leakage in case of insulating floor, so the electrostatic earth: $1 \times 10^8 \Omega$  should be made.

Humidity

Humidity in work area relates to surface resistance of the persons or objects that generate electrostatics, and it can be manipulated to prevent electrostatic charge. Humidity of 40% or lower increases electrostatic earth resistance and promotes electrostatic charging. Therefore, the humidity in the work area should be kept above 40%. Specifically for film peeling process or processes that require human hands, humidity should be kept above 50% and use electricity removal blower.

#### Transportation/Storage

Containers and styroform used in transporation and storage may charge electrostatic (from friction and peeling) or electrostatic charge from human body, etc. may cause containers and styroform to have induced charge. Proper electrostatic measure should be taken for containers and storage material.

# [For operating LCD module]

(1) Do not operate the LCD panel under outside of electrical specification. Otherwise LCD panel may be damaged.(2) Do not use the LCD panel under outside of specified driving timing chart. Otherwise LCD panel may not have proper picture quality.

(3) A still image should be displayed less than two hours, if it is necessary to display still image longer than two hour, display image data must be refreshed in order to avoid sticking image on LCD panel.

(4) If LCD module takes a static electricity, as the display image which is written into pixel memory might not be displayed, Data update should be executed frequently.

# [Precautions for Storage]

(1) After opening the package, do not leave the LCD panel in direct sun or under strong ultraviolet ray. Store in dark place.

(2) In temperature lower than specified rating, liquid crystal material will coagulate. In temperature higher than specified rating, it isotropically liquifies. In either condition, the liquid crystal may not recover its original condition. Store the LCD panel in at or around room temperature as much as possible.

Also, storing the LCD panel in high humidity will damage the UV protection film. Store in normal room temperature as much as possible.

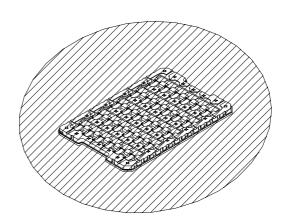

(3) Keeping Method

a. No direct sun light

b. Store in trays and in dark room

## [Other Notice]

- (1) Operation outside specified environmental conditions cannot be guaranteed.
- (2) As power supply (VDD-GND, VDDA-GND) impedance is lowered during use, bus controller should be inserted near LCD module as much as possible.
- (3) UV protection film is applied over LCD panel surface. Liquid crystal inside LCD panel deteriorates with ultraviolet ray. The panel should not be left in direct sun or under strong ultraviolet ray for prolonged period of time even with the UV protection film.
- (4) Disassembling the LCD module will cause permanent damage to the module. Do not disassemble the module.
- (5) If LCD panel is broken, do not ingest the liquid crystal from the broken panel. If hand, leg, or clothes come in contact with liquid crystal, wash off immediately with soap.
- (6) ODS (specific chlorofuorocarbon, specific halon, 1-1-1 trichloroethane, carbon tetrachloride) are not used or contained in material or all production processes of this product.
- (7) Observe all other precautionary requirements in handling general electronic components.

#### **Discarding liquid crystal modules**

- LCD Panel
   : Dispose of as glass waste. This LCD module contains no harmful substances. The liquid crystal panel contains no dangerous or harmful substances. This liquid crystal panel contains only an extremely small amount of liquid crystal (approximately 100mg) and therefore it will not leak even if the panel should break. Its median lethal dose (LD50) is greater than 2,000 mg/kg and a mutagenetic (Aims test: negative) material is used.
- FPC : (1) FPC bend R should be 0.45mm or greater and R should be even.
   In LCD panel an connective area, do not bend FPC into UV protection film side.
   (2) Do not hang LCD module by FPC or apply force to FPC.

#### 1. Scope of Application

Reflective active-matrix type memory liquid crystal display module with WQVGA (400x240) panel which uses CG silicon thin film transistor.

#### 2. Overview

- 2.7" WQVGA monochrome PNLC reflective panel
- 400x240 dot stripe arrangement
- Display control with serial data signal communication
- Arbitrary line data update
- · Internal 1bit memory within the panel for data memory
- Thin, light and compact module with monolithic technology
- Super low power consumption TFT panel
- With FPC (Applicable connector: Refer to recommended connector on page 21.)

#### 3. Mechanical Specification

Tabke 3-1 Module Mechanical Specification

Item	Specification	Unit
Screen Size (Diagonal)	6.86 (2.7")	cm
Viewing Area	58.8 (H) × 35.28 (V)	mm
Dot Structure	400 (H) × 240 (V)	dot
Dot pitch	0.147 (H) × 0.147 (V)	mm
Pixel Arrangement	Stripe arrangement	-
Module outline dimension (Extruded part not included)	62.8 (W) × 42.82 (H) × 1.4 (D)	mm
Weight	9.4 (TYP <b>)</b>	g
Surface Hardness	3H or more (Initial)	Pencil hardness

(Remark) Refer to Figure 8-1 for detailed dimension and tolerance.

#### 4. Input Terminal names and function

4-1) Input Terminal

Table 4	-1			
Terminal	Code	1/0	Function	Remark
1	SCLK	INPUT	Serial clock signal	
2	SI	INPUT	Serial input signal	
3	SCS	INPUT	Chip select signal	
4	EXTCOMIN	INPUT	External COM inversion signal input (H: Active)	
5	DISP	INPUT	Display ON/OFF signal	Remark 4-2
6	VDDA	POWER	Analalog power supply	
7	VDD	POWER	Digital power supply	
8	EXTMODE	INPUT	COM inversion mode switch terminal	Remark 4-1
9	VSS	POWER	Logic GND	
10	VSSA	POWER	Analog GND	

Remark 4-1] "H"=EXTCOMIN singal enabled, "L"=Serial input flag enabled. When "H", connect EXTMODE to VDD and when "L" to VSS.

Remark 4-2] ON/OFF for LCD display only. Memory data is maintained.

When "H", displays with memory data, and when "L", displays all white with memory data maintained.

4-2) Recommended Circuit COM signal serial input EXTMODE="L"

External COM signal input EXTMODE="H"

#### 5. Absolute Maximum Rating

Table 5-1 (GND=0V)

	Item	Code	MIN.	MAX.	Unit	Remark
Power	Analog Power Supply	VDDA	-0.3	+5.8	V	
supply Voltage	Logic Power Supply	VDD	-0.3	+5.8	V	Remark 5-1
Input sign	al terminal voltage (high)			VDD	V	Remark 5-2
Input sign	al terminal voltage (low)		-0.3		V	
Storage te	emperature	Tstg	-30	+80	°C	Remark 5-3,4
Operating	temperature	Topr1	-20	+70	°C	Remark 5-5
(Panel su	rface temperature)					

Remark 5-1 Also applicable to EXTMODE.

Remark 5-2] Applicable to SCLK, SI, SCS, DISP, EXTCOMIN.

Remark 5-3 Do not exceed this rating in any area of the module.

Remark 5-4] Maximum wet-bulb temperature should be 57°C or lower. Do not allow condensation.

Condensation may cause electrical leak and the module may not meet s specification.

Remark 5-5]Operating temperature is temperature that guarantess operation only. For contrast, response speed, and other display quty, module is evaluated at Ta=+25°C.

## 6. Electrical Characteristics

#### 7. Optical Characteristics

Table 7-1							Ta=25° <b>C</b>
Item		Code	MIN.	TYP.	MAX.	Unit	Remark
Viewing Angle	Н	θ21,θ22	60			°(Degree)	Remark 7-1
CR≧2	V	θ11	60			°(Degree)	
		θ12	60			°(Degree)	
Contrast Ratio		CR.	5	6			Remark 7-2、 3]
Reflection Ratio		R		50		%	Remark 7-3
Response	Rise	τr		50		ms	Remark
Speed	Fall	τd		50		ms	7-3,4】
Panel Surface	White	x		0.313			Remark 7-3
Chromaticity		у		0.338			

#### Remark 7-3] Optical Characteristics Measurement Equipment

Contrast ratio, reflective ratio and panel surface chromaticity are measured as shown in figure 7-2, and Response speed is measured as shown in Figure 7-3. Both measurement methods are done in dark Room or equivalent.

- <Recommended Capacitor>
- C1: Between DISP-VSS, B characteristics 0.1uF ceramic capacitor
- C2: Between VDDA-VSS, B characteristics 0.1uF or more cerac capacitor
- C3: Between VDD-VSS, B characteristics 1uF or more ceramic capacitor

\*Above circuit and parts are only recommendation.

For actual use, please evaluate their conformity with your system and design.

(Capacitor pressure resistance can be larger than resistance indicated above.)

# 10. External Power Supply Circuit

An external power supply circuit is necessary to drive the memory LCD with 3V battery. Table 10-1 shows recommended power supply IC>

#### Table 10-1

Vendor	Model No.	Note	
SII	S-8821	Charge pump type	
National Semiconductor	LM2750	Charge pump type	

Remark 10-1] For detailed specification, refer to specification for each power supply IC.

Remark 10-2] To use, set constant value after sufficient evaluation of actual application.

**Electrical Characteristics**

Note Ta=Surrounding temperature, Tp=Panel temperature

#### (Evaluation method)

In standard condition, there shall be no practical problems that may affect the display function.

#### 12-2) Panel surface stress specification

"Force of stress [N]" without display failure (display non-uniformity) is defined as follow: Load testing (minimum): 120[N] or higher

Test conditions)	Module:	LCD panel
	Load point:	LCD panel center (glass cloth tape applied in load point area)
	Press jig:	$oldsymbol{\phi}$ 10mm cylinder
	Press speed:	1mm/minute
	Support:	Secured on stage
	Press time:	Hold for 5 seconds after reaching test press load and then release
