NOTICE

This publication is the proprietary of SHARP and is copyrighted, with all rights reserved. Under the copyright laws, no part of this publication may be reproduced or transmitted in any form or by any means, electronic or mechanical for any purpose, in whole or in part, without the express written permission of SHARP. Express written permission is also required before any use of this publication may be made by a third party.

The application circuit examples in this publication are provided to explain the representative applications of SHARP's devices and are not intended to guarantee any circuit design or permit any industrial property right or other rights to be executed. SHARP takes no responsibility for any problems related to any industrial property right or a third party resulting from the use of SHARP's devices, except for those resulting directly from device manufacturing processes.

In the absence of confirmation by device specification sheets, SHARP takes no responsibility for any defects that occur in equipment using any of SHARP's devices, shown in catalogs, data books, etc. Contact SHARP in order to obtain the latest device specification sheets before using any SHARP's device.

SHARP reserves the right to make changes in the specifications, characteristics, data, materials, structures and other contents described herein at any time without notice in order to improve design or reliability. Contact SHARP in order to obtain the latest specification sheets before using any SHARP's device. Manufacturing locations are also subject to change without notice.

Observe the following points when using any device in this publication. SHARP takes no responsibility for damage caused by improper use of the devices.

The devices in this publication are designed for use in general electronic equipment designs, such as:

- Personal computers • Office automation • Telecommunication equipment
- Test and measurement equipment • Industrial control
- Audio visual and multimedia equipment • Consumer electronics

The appropriate design measures should be taken to ensure reliability and safety when SHARP's devices are used for equipment such as:

- Transportation control and safety equipment(i.e., aircraft, trains, automobiles, etc.)
- Traffic signals • Gas leakage sensor breakers
- Alarm equipment • Various safety devices etc.

SHARP's devices shall not be used for equipment that requires extremely high level of reliability, such as:

- Military and space applications • Nuclear power control equipment
- Medical equipment for life support

Contact a SHARP representative, in advance, when intending to use SHARP's devices for any "specific" applications other than those recommended by SHARP.

Contact and consult with a SHARP representative if there are any questions about the contents of this publication.

(1) Application

This literature applies to LS037V7DD06.

(2) Overview

This module is a color transreflective and active matrix LCD module incorporating CG-Silicon TFT (Continuous Grain-Silicon Thin Film Transistor), named AD-TFT (Advanced TFT). It is composed of a color TFT-LCD panel, driver ICs, an FPC, a back light and a back sealed casing. It isn't composed control circuit. Graphics and texts can be displayed on a $480 \times 3 \times 640$ dots panel with 262,144 colors by supplying.

This LCD module has multi resolution and multi colors functions. A resolution mode is selective in VGA ($480H \times 640V$) or QVGA ($240H \times 320V$). A Color mode is selective in 262,144 colors (18bit RGB) or 8 colors (3bit RGB).

Optimum view angle is 6 o'clock. An inverted display mode is selective in the vertical and the horizontal direction.

(3) Mechanical specifications

Table 1

Parameter	Specifications	Units	Remarks
Screen size (Diagonal)	9.4 [3.7"] Diagonal	cm	
Display active area	56.16 (H) \times 74.88 (V)	mm	
Pixel format	480(H) \times 640(V) (1 pixel = R+G+B dots)	pixels	
Pixel pitch	0.039 (H) \times 0.117 (V)	mm	
Pixel configuration	R,G,B vertical stripe		
Unit outline dimension	65.0(W) \times 90.0(H) \times 3.35(D)	mm	【Note3-1】
Mass	Typ 39	g	

【Note 3-1】

Excluding protrusion. For detailed measurements and tolerances, please refer to Fig. 1.

23	B2	I	BLUE data signal	
24	B3	I	BLUE data signal	
25	B4	I	BLUE data signal	
26	B5	I	BLUE data signal (MSB)	
27	VSSD	—	Power supply of driver (low level1)	【Note5-4】
28	GND	—	Ground	
29	DCLK	I	Data sampling clock signal	
30	VSHD	—	Power supply (digital)	【Note5-4】
31	VCOM	I	Common electrode driving signal	
32	VDD	—	Power supply of driver (High level)	【Note5-4】
33	CsCOM	I	Cs electrode driving signal	【Note5-4】
34	VSHA	—	Power supply (analog)	【Note5-4】
35	V4	I	Standard voltage to generate gray scale voltage :option	
36	V3	I	Standard voltage to generate gray scale voltage :option	

Pin No.	Symbol	I/O	Description	Remarks
37	V2	I	Standard voltage to generate gray scale voltage :option	
38	V1	I	Standard voltage to generate gray scale voltage :option	
39	V0	I	Standard voltage to generate gray scale voltage :option	
40	SPL	I/O	Sampling start signal	【Note5-5】
41	SPR	I/O	Sampling start signal	【Note5-5】
42	LP	I	Data latch signal of source driver	
43	CO	I	Selection for color mode (18bit or 1bit digital RGB)	【Note5-6】
44	REV	I	Reverse control signal	
45	COM	O	Produce REV signal with the amplitude of AGND – VSHA :option	
46	LBL	I	Selection for horizontal scanning direction	【Note5-5】
47	ASC	I	Analog switch control signal	
48	SSC	I	Source signal control	
49	GND	—	Ground	
50	LED+	—	Power supply for LED (High voltage)	【Note5-4】
51	LED-	—	Power supply for LED (Low voltage)	

【Note5-1】 See section(7-1)-(A) "※Cautions when you turn on or off the power supply".

【Note5-2】 Selection for resolution mode

MO	Resolution
High	VGA
Low	QVGA

【Note5-3】 Selection for vertical scanning direction

U/L	Scanning direction (Pixel configuration)
High	Conventional scanning (X , 1) ↓ (X , Y)
Low	Inverted scanning (X , 1) ↑ (X , Y)

VGA mode: Y=640, QVGA mode: Y=320

【Note5-4】 When superfluous current flows, please intercept current with a fuse etc.

【Note5-5】 Selection for horizontal scanning direction

LBL	SPL	SPR	Scanning direction (Pixel configuration)
High	Input	Output	Normal scanning (1,Y) → (X,Y)
Low	Output	Input	Inverted scanning (1,Y) ← (X,Y)

VGA mode: X=480, QVGA mode: X=240

【Note5-6】 Selection for color mode

CO	Color variation
High	262,144 colors (18bit RGB colors)
Low	8 colors (3bit RGB colors)

(6) Absolute Maximum Ratings

Table 5

Parameter		Symbol	Min.	Typ.	Max.	Unit	GND=0V Remarks
Supply voltage for COG driver	Analog	VSHA	+4.8	+5.0	+5.2	V	
	Digital	VSHD	+3.0	+3.3	+3.6	V	
Supply voltage for monolithic driver	High voltage	VDD	+7.6	+8.0	+8.4	V	
	Low voltage	VSSD	-4.4	-4.0	-3.6	V	
	Low voltage	GVSS	-8.4	-8.0	-7.6	V	
Gray scale voltage	V0~V4	GND			VSHA	V	[Note 7-1]
Input voltage (Low)	VILS	GND	-	0.2VSHD	V	[Note 7-2]	
Input voltage (High)	VIHS	0.8VSHD	-	VSHD	V	[Note 7-2]	
Input current (Low)	IILS	-	-	1	μ A	[Note 7-2]	
Input current (High)	IIHS	-	-	1	μ A	[Note 7-2]	
Common electrode driving signal	AC component	VCOMAC	-	± 2.5	± 2.6	Vp-p	[Note 7-3]
	DC component	VCOMDC	+0.1	+1.1	+2.1	V	[Note 7-3]
Cs electrode driving signal	AC component	CsCOMAC	-	5.0	5.2	Vp-p	[Note 7-4]
	DC component	CsCOMDC	+7.6	+8.0	+8.4	V	[Note 7-4]

※Cautions when you turn on or off the power supply

- ① Stabilize VSHD(3.3V) within double vertical periods second.
- ② Supply SPS, DATA(White pattern), REV(with High), and other signals. Stabilize VSHA(+5V), VDD(+8V), VSSD(-4V) within double vertical periods.
- ③ INI signal and GVSS(-8V) are supplied. Stabilize GVSS(-8V) within single vertical period.
- ④ White pattern is displayed during double or more vertical periods.
- ⑤ REV signal is stopped with High level. VSHA(+5V) supply is stopped, which is stabilized within double vertical periods.
- ⑥ VDD(+8V), VSSD(-4V) and GVSS(-8V) supplies are stopped, which are stabilized within double vertical periods.
- ⑦ SPS, DATA, REV and other IF signals are stopped with Low level. Then VSHD(+3.3V) supply is stopped.
- 【Note 7-1】 These are standard input voltages for gray scale. When VCOM is alternated polarity, these voltage should be alternated polarity. V0(black) is different polarity alternating signal of VCOM. V4(white) is the same polarity alternating signal of VCOM. Center voltage of each standard input voltage shift positive way for LCD characteristics ($V0 \rightarrow V1 \rightarrow V2 \rightarrow V3 \rightarrow V4$). This sift amount is adjusted so as to no flicker of each standard input voltage after DC bias voltage of VCOM and V0 is adjusted.
- 【Note 7-2】 SSC, ASC, LBR, REV, CO, LP, SPR, SPL, DCLK, U/L, MO, CLS, SPS, INI, R0~R5, G0~G5, B0~B5 terminals are applied.
- 【Note 7-3】 VCOMAC should be alternated on VCOMDC every 1 horizontal period and 1 vertical period. VCOMDC bias is adjusted so as to minimize flicker or maximum contrast every each module. $VCOM = VCOMAC + VCOMDC$
- 【Note 7-4】 CsCOMAC should be alternated on CsCOMDC every 1 horizontal period and 1 vertical period. CsCOM's phase is as same as VCOM's. $CsCOM = CsCOMAC + CsCOMDC$

	y		0.28	0.33	0.38		
Reflection ratio	R	θ =0°	4	6	-	%	[Note 9-5]

* The measuring method of the optical characteristics is shown by the following figure.

* A measurement device is Otsuka luminance meter LCD5200.(With the diffusion reflection unit.)

**Measuring method (a) for optical characteristics**

9-2) Driving the Back light condition

Table 12

Ta=25°C

Parameter	Symbol	Condition	Min	Typ	Max	Unit	Remarks
Viewing angle range	θ21,22	CR≥2	30	40	-	degree	[Note 9-1,2,6]
	θ11		30	40	-	degree	
	θ12		30	40	-	degree	
Contrast ratio	Crmax	$\theta = 0^\circ$	70	100	-		[Note 9-2]
Response time	Rise		-	30	60	ms	[Note 9-3]
	Fall		-	50	100	ms	
White chromaticity	x		0.23	0.28	0.33		
	y		0.25	0.30	0.35		
Brightness	Y	$\theta = 0^\circ$	85	100	-	(cd/m ²)	IL=15mA

* The measuring method of the optical characteristics is shown by the following figure.

* A measurement device is TOPCON luminance meter BM-5(A). (Viewing cone 1)

Measuring method (b) for optical characteristics

[Note 9-1] Viewing angle range is defined as follows.

6 o' clock direction

Definition for viewing angle

[Note 9-2] Definition of contrast ratio:

The contrast ratio is defined as follows:

$$\text{Contrast ratio(CR)} = \frac{\text{Photodetector output with all pixels white(GS63)}}{\text{Photodetector output with all pixels black(GS0)}}$$

VCOMAC=5.0Vp-p

[Note 9-3] Definition of response time:

The response time is defined as the following figure and shall be measured by switching the input signal for "black" and "white".

[Note 9-4] A measurement device is Minolta CM-2002.

[Note 9-5] Definition of reflection ratio

$$\text{Reflection ratio} = \frac{\text{Light detected level of the reflection by the LCD module}}{\text{Light detected level of the reflection by the standard white board}}$$

[Note 9-6] A measurement device is ELDIM EZContrast

(10) Display quality

The display quality of the color TFT-LCD module shall be in compliance with the Incoming Inspection Standards for TFT-LCD..

(11) Mechanical characteristics

11-1) External appearance

See Fig. 1

11-2) FPC (for LCD panel) characteristics

(1) Specific connector

LCD-FPC : JAE FF0251SS1 (Bottom contact only)

(2) Bending endurance

No line of the FPC is broken for the bending test (Bending radius=0.6mm and angle=90°) in 30 cycles.

(12)Handling Precautions

12-1) Insertion and taking out of FPCs

Be sure insert and take out of the FPC into the connector of the set after turning off the power supply on the set side.

12-2) Handling of FPCs

The FPC for LCD panel shall be bent only slit portion. The bending slit shall be bent uniformly on the whole slit portion with bending radius larger than 0.6mm ,and only inner side (back side of the module). Don't bend it outer side (display surface side).

Don't give the FPCs too large force, for example, hanging the module with holding FPC.

12-3) Installation of the module

On mounting the module, be sure to fix the module on the same plane. Taking care not to warp or twist the module.

12-4)Precaution when mounting

- (1) If water droplets and oil attaches to it for a long time, discoloration and staining occurs. Wipe them off immediately.
- (2) Glass is used for the TFT-LCD panel. If it is dropped or bumped against a hard object, it may be broken. Handle it with sufficient care.
- (3) As the CMOS IC is used in this module, pay attention to static electricity when handling it. Take a measure for grounding on the human body.

12-5)Others

- (1) The liquid-crystal is deteriorated by ultraviolet rays. Do not leave it in direct sunlight and strong ultraviolet rays for many hours.
- (2) If it is kept at a temperature below the rated storage temperature, it becomes coagulated and the panel may be broken. Also, if it is kept at a temperature above the rated storage temperature, it becomes isotropic liquid and does not return to its original state. Therefore, it is desirable to keep it at room temperature as much as possible.
- (3) If the LCD breaks, don't put internal liquid crystal into the mouth. When the liquid crystal sticks to the hands, feet and clothes, wash it out immediately.
- (4) Wipe off water drop or finger grease immediately. Long contact with water may cause discoloration or spots.
- (5) Observe general precautions for all electronic components.
- (6) VCOM must be adjusted on condition of your final product. No adjustment causes the deterioration for display quality.
- (7) Static image should not be displayed more than 5 minutes in order to prevent from occurrence of residual image.

(13) Reliability Test Conditions for TFT-LCD Module

Table 14

No.	Test items	Test conditions
1	High temperature storage test	Ta=+70°C 240h
2	Low temperature storage test	Ta=-20°C 240h
3	High temperature and high humidity operating test	Tp=+40°C , 95%RH 240h (But no condensation of dew)
4	High temperature operating test	Tp=+60°C 240h
5	Low temperature operating test	Tp=-10°C 240h
6	Electro static discharge test	±200V · 200pF(0Ω) 1 time for each terminals
7	Shock test	980 m/s ² , 6 ms ±X,±Y,±Z 3 times for each direction (JIS C0041, A-7 Condition C)
8	Vibration test	Frequency range: 10Hz~55Hz Stroke: 1.5 mm Sweep: 10Hz~55Hz X,Y,Z 2 hours for each direction (total 6 hours) (JIS C0040,A-10 Condition A)
9	Heat shock test	Ta=-20°C~+70°C / 5 cycles (1h) (1h)

【Note】 Ta = Ambient temperature, Tp = Panel temperature

【Check items】

In the standard condition, there shall be no practical problems that may affect the display function.

(14) Others

14-1) Indication of lot number

The lot number is shown on a label. Attached location is shown in Fig.1 (Outline Dimensions).

Indicated contents of the label

14-2) Used Regulation of Chemical Substances Breaking Ozone Stratum

Substances with the object of regulating : CFCS, Carbon tetrachloride, Halon

1,1,1-Trichloro ethane (Methyl chloroform)

- (a) This LCD module, Constructed part and Parts don't contain the above substances.
- (b) This LCD module, Constructed part and Parts don't contain the above substances in processes of manufacture.

14-3) If some problems arise about mentioned items in this document and other items, the user of the TFT-LCD module and Sharp will cooperate and make efforts to solve the problems with mutual respect and good will.

(15) Forwarding form (see Fig.2 Package Form)

- a) Piling number of cartons : MAX 8
- b) Package quality in one cartons : 100pcs
- c) Carton size : 575mm × 360mm × 225mm
- d) Total mass of 1 carton filled with full modules : 7900g

Conditions for storage.

Environment

- | | |
|----------------------------|---|
| (1) Temperature | : 0~40°C |
| (2) Humidity | : 60%RH or less (at 40°C)
No dew condensation at low temperature and high humidity. |
| (3) Atmosphere | : Harmful gas, such as acid or alkali which bites electronic components and/or wires, must not be detected. |
| (4) Period | : about 3 months |
| (5) Opening of the package | : In order to prevent the LCD module from breakdown by electrostatic charges, please control the room humidity over 50%RH and open the package taking sufficient countermeasures against electrostatic charges, such as earth, etc. |

1

2

3

4

5

Tolerance of thickness does not include any wrinkling
of PET tape or any loose PET tape off the FPC.
General tolerance is ± 0.5 .

LCD-FPC should bended only bending area.

LCD/LED FPC bend larger than 0.6 in radius.

Take care in set design to hide
the scratches and bubbles appeared on
the Polarizer or other frame area

which is located outside of guarantee area.

The light of Back Light is leaking from BM
outside. Please light shielding by the set.

The tolerance of module width are
exclude warp of case.

Guarantee of appearance = LCD Active Area.

LCD/LED FPC
 0.12 ± 0.03
