## 1 General Specifications

TM070RVHG01 is a color active matrix LCD module incorporating amorphous silicon TFT (Thin Film Transistor). It is composed of a color TFT-LCD panel, driver IC with CABC function, FPC, a back light unit and CTP (Capacitive Touch Panel) with Multi-Touch function. The mounting method is with optical bonding . This product accords with RoHS environmental criterion.

Item	Feature	Spec	Unit	Note
	Size	7	inch	
	Resolution	800(RGB) x 480		
	Interface	RGB 24 bits		
	Color Depth	16.7M		
	Technology Type	a-Si		
	Pixel Pitch	0.1926x0.179	mm	
TFT	Pixel Configuration	R.G.B. Vertical Stripe		
	Display Mode	TM with Normally White		
	Surface Treatment(Up Polarizer)	Anti-Glare(3H)		
	Viewing Direction	12 o'clock		1
	Gray Scale Inversion Direction	6 o'clock		
	LCM (W x H x D)	164.90x100x5.7	mm	
	Operation Technology	Projected capacitive		
	Control IC	NT11003		
	Input Method	Bare finger		
	Number of simultaneous touches	2 points		
TP	Surface hardness			
	Minimum Touch Area	Ф6	mm	
	Finger Pitch	13	mm	
	Product structure	Glass Lens - Glass Sensor		2
	Interface	I2C		
	TFT Active Area	154.08x85.92	mm	
Mechanical	TP Active Area	155.24(W) x 87.12(H)	mm	
Characteristics	LED Numbers	24 LEDs		
	Weight		g	

Reliability Characteristics	Operation temperature	-20~70	$^{\circ}\!\mathbb{C}$	1
	Storage temperature	-30~80	$\mathbb{O}_{}$	

Note 1: Viewing direction for best image quality is different from Gray Scale Inversion Direction, there is a 180 degree shift.

Note 2: Requirements on Environmental Protection: RoHS

## 2. Input/Output Terminals

## 2.1 TFT CN1 pin assignment

Connector type: FH28-60S-0.5SH

PIN	Symbol	I/O	Description	Remark
1	VLED+	Р	Led anode	
2	VLED+	Р	Led anode	
3	VLED-	Р	Led cathode	
4	VLED-	Р	Led cathode	
5	GND	Р	Ground	
6	VCOM	Р	Common voltage input

48	GND	Р	Ground	
49	NC	NC		
50	NC	NC		

Note1: I/O definition.

I---Input, O---Output, P--- Power/Ground, N--- No connection

#### Note2:

Scan conf	rol input	Seanning direction
UD LR		Scanning direction
GND	VCC	Up to down, left to right
VCC	GND	Down to up, right to left
GND	GND	Up to down, right to left
VCC	VCC	Down to up, left to right

## 2.2 TP pin assignment

Pin No.	Symbol	I/O	Description	Remark
1	SCL	I	I2C clock input	
2	SDA	I/O	I2C data input and output	
3	GND	Р	Groud	
4	GND	Р	Groud	
5	ATTN	I/O	External interrupt to the host	
6	GND	Р	Groud	
7	VPP	I/O	External interrupt from the host	
8	VDD	Р	CTP power supply	
9	GND	Р	Groud	
10	GND	Р	Groud	

## 3. Absolute Maximum Ratings

Ta = 25℃

Item	Symbol	Min	Max	Unit	Remark
	VDD	-0.50	5.00	V	
	AVDD	-0.50	15.00	V	
Power Voltage	VGH	-0.30	42.00	V	
	VGL	-20.0	0.30	V	
	VGH-VGL	-0.30	40.00	V	
Backlight Forward Current	ILED	-	200	mA	
Operating Temperature	TOPR	-20	70	$^{\circ}\!\mathbb{C}$	Note2
Storage Temperature	TSTG	-30	80	$^{\circ}\!\mathbb{C}$	

Table 3.1 absolute maximum rating

Note1: The parameter is for driver IC (gate driver, source driver) only

Note2: 80 °C is the surface temperature of module

## **Electrical Characteristics**

## 4.1 .1Driving TFT LCD Panel

Ta = 25℃

							10 - 20 0
	Item	Symbol	Min	Тур	Max	Unit	Remark
Voltage for logic circuit		VCC	3.00	3.30	3.60	V	
Analog Supply Voltage		AVDD	9.88	10.4	10.92	V	
Gate O	n Voltage	VGG	14.4	16	17.6	٧	
Gate Of	ff Voltage	VEE	-7.70	-7.00	-6.30	V	
Commo Driving	n Electrode Signal	VCOM	3.68	3.70	3.72	V	
Input	Low Level	VIL	0	-	0.3xVCC	٧	
Signal Voltage	High Level	VIH	0.7xVCC	-	VCC	٧	

#### Table 4.1 LCD module electrical characteristics

Note1: For different LCM, the value may have a bit of difference.

Note2: To test the current dissipation, use "all Black Pattern".

## 4.1.2 TFT Driving Backlight

Item	Symbol	Condition	Min	Тур	Max	Unit	Remark
Forward Voltage	VLED	I <sub>F</sub> =160mA		9.6	10.8	V	
Forward Current	I <sub>F</sub>	-	-	160	200	mA	Note 1
Backlight Power Consumption	WBL	I <sub>F</sub> =160mA		1536	2160	mW	
Life Time	-	I <sub>F</sub> =160mA	10,000	-	-	Hrs	Note 3

Table 4.2 LED backlight characteristics

Note 1:  $I_F$  is defined for one channel LED. There are total three LED channels in back light unit. Under LCM operating, the stable forward current should be inputted.

Note 2: Optical performance should be evaluated at Ta=25℃ only.

Note 3: If LED is driven by high current, high ambient temperature & humidity condition. The life time of LED will be reduced. Operating life means brightness goes down to 50% initial brightness. Typical operating life time is estimated data.

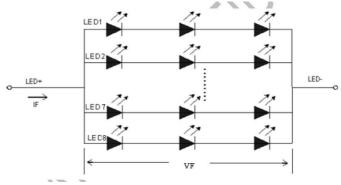

Figure 4.2 LED connection of backlight

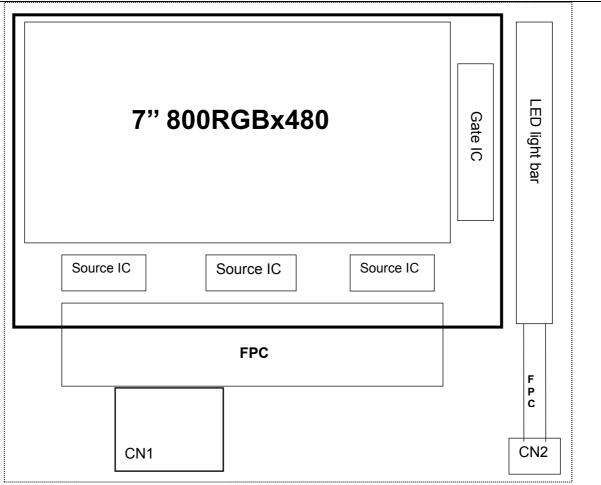

#### 4.2 TP DC Characteristics

 $(T_A = 25^{\circ}C, VDD = 3.3V)$ 

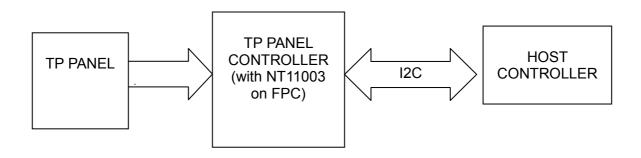

Item	Min	Тур	Max	Unit	Note
power supply voltage	2.7	3.3	3.6	٧	DC(noise should be under 100mV)
Power supply current			10	mA	

## 4.3.1 TFT Block Diagram

## 4.3.2 TP Circuit Block Diagram

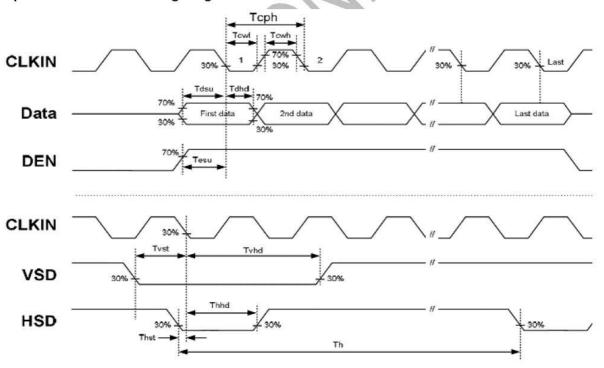

## **Timing Chart**

## 5.1 TFT-LCD Input Timing

VCC=3.3V, GND=0V, Ta=25  $^{\circ}$ C

Parameter	Symbol	Min	Тур	Max	Unit	Remark
DCLK frequency	Fclk	28	30.0	40.0	MHz	
DCLK cycle time	Tcph	25	33.3	36	ns	
DCLK pulse width	Tcw	40%	50%	60%	Tcph	
VS setup time	Tvst	8			ns	
VS hold time	Tvhd	8	-	-	ns	
HS setup time	Thst	8			ns

#### **Test Conditions:**

- 1.  $I_F$ = 20mA(one channel), the ambient temperature is 25°C.
- 2. The test systems refer to Note 1 and Note 2.

Note 1: Definition of optical measurement system.

The optical characteristics should be measured in dark room. After 10 Minutes operation, the optical properties are measured at the center point of the LCD screen. All input terminals LCD panel must be ground when measuring the center area of the panel.

Item	Photo detector	Field
Contrast Ratio		
Luminance	CD 2A	1°
Chromaticity	SR-3A	ļ
Lum Uniformity		
Response Time	BM-7A	2°

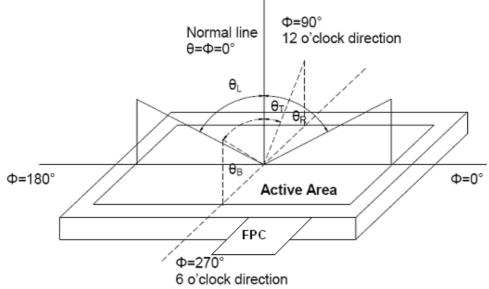

Note 2: Definition of viewing angle range and measurement system.

TIANMA MICROELECTRONICS CO., LTD

13

viewing angle is measured at the center point of the LCD by CONOSCOPE(ergo-80).

Note 3: Definition of contrast ratio

Contrast ratio (CR) = Luminance measured when LCD is on the "White" state Luminance measured when LCD is on the "Black" state

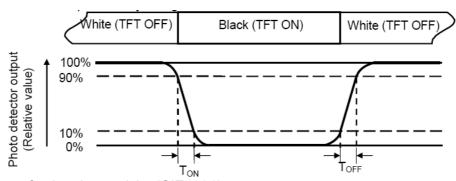

"White state ": The state is that the LCD should drive by Vwhite.

"Black state": The state is that the LCD should drive by Vblack.

Vwhite: To be determined Vblack: To be determined.

Note 4: Definition of Response time

The response time is defined as the LCD optical switching time interval between "White" state and "Black" state. Rise time  $(T_{ON})$  is the time between photo detector output intensity changed from 90% to 10%. And fall time  $(T_{OFF})$  is the time between photo detector output intensity changed from 10% to 90%.

Note 5: Definition of color chromaticity (CIE1931)

Color coordinates measured at center point of LCD.

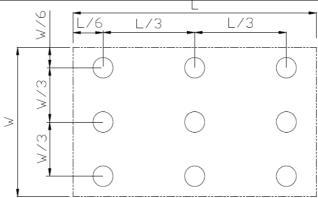

Note 6: Definition of Luminance Uniformity

Active area is divided into 9 measuring areas (Refer Fig. 2). Every measuring point is placed at the center of each measuring area.

Luminance Uniformity (U) = Lmin/Lmax

L----- Active area length W----- Active area width

Lmax: The measured Maximum luminance of all measurement position.

Lmin: The measured Minimum luminance of all measurement position.

Note 7: Definition of Luminance:

Measure the luminance of white state at center point.

## 6.2 TP Optical Characteristics

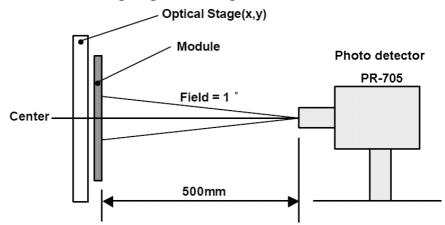

(Ta = 25 C)

( · · · ·	14 25 0)								
No.	Item	Min.	Тур.	Max.	Unit	Remark			
1	Transmission	86	88		%	Note 1			
2	Reflectivity			4	%	Note 1,Note 2			
3	HAZE			2	%				

Note1: Measuring equipments: DMS-501, PR-705. @550nm

Measuring condition:

- After stabilizing and leaving the panel alone at a given temperature for 30 min, the measurement should be executed,
  - Measuring surroundings: a stable, windless and dark room,
  - Measuring temperature: Ta=25°C,
  - 30 min after lighting the back-light.

Note2: conform to National standard GB2410—80 /ASTM D1003—61(1997)

## **Reliability Test**

No	Test Item	Condition	Remarks
1	High Temperature Operation	Ta = +70℃, 240 hours	Note1,Note6,Note7 IEC60068-2-1,GB2423.2
2	Low Temperature Operation	Ta = -20℃, 240 hours	Note1, Note7,IEC60068-2-1 GB2423.1
3	High Temperature Storage	Ta = +80℃, 240 hours	Note1, Note7,Note8 IEC60068-2-1 GB2423.2
4	Low Temperature Storage	Ta = -30℃, 240 hours	Note1, Note7,EC60068-2-1 GB2423.1
5	High Temperature & Humidity Storage	Ta=+65°C 、RH=90%, 240 hours	Note1,Note3, Note4,Note7 IEC60068-2-78 GB/T2423.3
6	Thermal Shock/ Solder Joint Life Test	-30°C (30min) ⇔80°C (30min) ,Change	Note1,Note9 Start with cold temperature End with high temperature, IEC60068-2-14,GB2423.22
12	ESD	C=150pF $\cdot$ R=330 $\Omega$ Air: $\pm$ 8KV Contact: $\pm$ 8KV 5times (Environment:15 $^{\circ}$ C $^{\circ}$ 35 $^{\circ}$ C, 30% $^{\circ}$ 60%.86Kpa $^{\circ}$ 106Kpa)	Note2,Note5, IEC61000-4-2 GB/T17626.2
13	Shock Test	Half Sine Wave 100G ,6ms,±X,±Y,±Z 3times for each direction	Note2
14	Drop Test(package state)	Height:60cm, 1corner,3edges,6surfaces	Note2,IEC60068-2-32 GB/T2423.8

#### Notes:

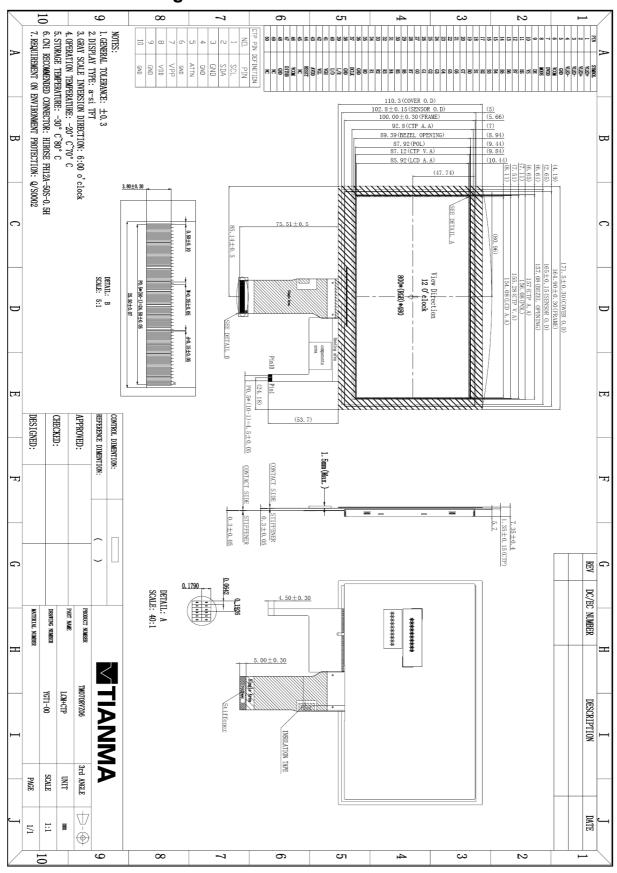

- 1. The test result shall be evaluated after the sample has been left at room temperature and humidity for 2 hours without load. No condensation shall be accepted. The sample will not be accepted if appear these defects:
- 1). Air bubble in the LCD;
- 2).Seal leak
- 3). Non-display
- 4).missing segments
- 5). Glass crack
- 6).CR reduction >40%
- 7).IDD increase >100%
- 8).Brightness reduction >50%
- 9). Color coordinate tolerance >0.05
- 2. The samples of these tests will not be accepted if appear these defects:
  - 1). Air bubble in the LCD;
- 2).Seal leak

- 3).Non-display
- 4).missing segments
- 5). Glass crack
- 3. Each test item applies for a test sample only once, The test sample can not be used again in any other test item.
- 4.For Damp Proof Test, Pure water(Resistance  $> 10M\Omega$ ) should be used.
- 5.In case of malfunction defect caused by ESD damage, if it would be recovered to normal state after resetting, it would be judge as a good part.
- 6 In the test of High Temperature Operation and High Temperature & Humidity Operation ,the operation temperature is the surface temperature of module
- 7 High Temperature Operation Low Temperature Operation High Temperature Storage Low Temperature Storage High Temperature & Humidity Operation High Temperature & Humidity Storage will be increased the test time to 1000hours in the same conditions to test out the ability of module, and we can not guarantee that the module will not fail during 1000hours. These items test only once
- 8. Thermal Shock will be changed the cycle to 1000cycles to test out the ability of module, and we can not guarantee that the module will not fail after the test. This item test only once

## 8 Mechanical Drawing

## 9. Product Inspection Criteria

#### 9.1 Classification of defects

Major defects (MA): A major defect refers to a defect that may substantially degrade usability for product applications, including all functional defects(such as no display, abnormal display, open or missing segment, short circuit, missing component), outline dimension beyond the drawing, progressive defects and those affecting reliability.

Minor defects (MI): A minor defect refers to a defect which is not considered to be able to substantially degrade the product application or a defect that deviates from existing standards almost unrelated to the effective use of the product or its operation, such as black spot, white spot, bright spot, pinhole, black line, white line, contrast variation, glass defect, polarizer defect, etc.

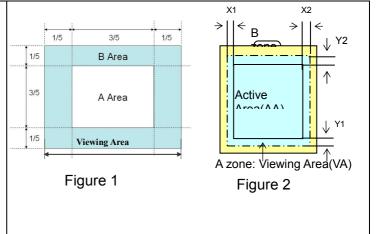

#### 9.2 Definition of inspection range

For dot defect of TFT LCD which is not smaller than 3 inches, dividing three areas to make a judgment (according to figure 1).

A area: center of viewing area
B area: periphery of viewing area
C area: Outside viewing area

For other defects, dividing two areas to make a judgment (according figure 2).

Y1(A.A~V.A): 0mm Y2(A.A~V.A): 0mm

## 9.3 Inspection items and general notes

General notes	①Should any defects which are not specified in this standard happen, additional standard shall be determined by mutual agreement between customer and TIANMA. ②Viewing area should be the area which TIANMA guarantees. ③Limit sample should be prior to this Inspection standard. ④Viewing judgment should be under static pattern. ⑤Inspection conditions Inspection distance: 250 mm (from the sample) Inspection angle : 45 degrees in 12 o'clock direction (all defects in viewing area should be inspected from this direction)					
Inspectio n items	Pinhole, Bright spot, Black spot, White spot, Black line, White Line, Foreign particle, Bubble Contrast variation Polarizer defect	The color of a small area is different from the remainder. The phenomenon doesn't change with voltage  The color of a small area is different from the remainder. The phenomenon changes with voltage  Scratch, Dirt, Particle, Bubble on polarizer or between polarizer and glass				
	Dot defect (TFT LCD)	The pixel appears bright or dark abnormally when display				
	Functional defect	No display, Abnormal display, Open or missing segment, Short circuit, False viewing direction

		Component soldering: No cold soldering short open circuit burr tin ball The flat encapsulation component position deviation must be less than 1/3 width of the pin (Pic.1); the sheet component deviation: Pin deviates from the pad and contact with the near components is not permitted (Pic.2)	Component  Component  Component  Component  Component  L1>0		
16	РСВ	lead defect: The lead lack must be less than 1/3 of its width; The lead burr must be less than 1/3 of the seam; Impurities connect with the near leads is not permitted			
	defect	Connector soldering: Soldering tin is at contact position of the plug and socket is not permitted No foundation is scald Serious cave distortion on plug and socket contact pin is not permitted	Soldering tin is not permit in this  Soldering tin is not permit in this  Socket  Base Board		
		Glue on root of the speaker receiver and motor lead: The insulative coat of the lead must join into the PCB; the protected glue must envelop to the insulative coat.	Glue Lead PCB Insulative coat		

#### 10. Precautions for Use of LCD Modules

#### 10.1 Handling Precautions

- 10.1.1 The display panel is made of glass. Do not subject it to a mechanical shock by dropping it from a high place, etc.
- 10.1.2 If the display panel is damaged and the liquid crystal substance inside it leaks out, be sure not to get any in your mouth, if the substance comes into contact with your skin or clothes, promptly wash it off using soap and water.
- 10.1.3 Do not apply excessive force to the display surface or the adjoining areas since this may cause the color tone to vary.
- 10.1.4 The polarizer covering the display surface of the LCD module is soft and easily scratched. Handle this polarizer carefully.
- 10.1.5 If the display surface is contaminated, breathe on the surface and gently wipe it with a soft dry cloth. If still not completely clear, moisten cloth with one of the following solvents:
  - Isopropyl alcohol
  - Ethyl alcohol

Solvents other than those mentioned above may damage the polarizer.

Especially, do not use the following:

- Water
- Ketone
- Aromatic solvents
- 10.1.6 Do not attempt to disassemble the LCD Module.
- 10.1.7 If the logic circuit power is off, do not apply the input signals.
- 10.1.8 To prevent destruction of the elements by static electricity, be careful to maintain an optimum work environment.
  - a. Be sure to ground the body when handling the LCD Modules.
  - b. Tools required for assembly, such as soldering irons, must be properly ground.
  - c. To reduce the amount of static electricity generated, do not conduct assembly and other work under dry conditions.
  - d. The LCD Module is coated with a film to protect the display surface. Be care when peeling off this protective film since static electricity may be generated.

#### 10.2 Storage precautions

- 10.2.1 When storing the LCD modules, avoid exposure to direct sunlight or to the light of fluorescent lamps.
- 10.2.2 The LCD modules should be stored under the storage temperature range. If the LCD modules will be stored for a long time, the recommend condition is:

Temperature :  $0^{\circ}$ C  $\sim 40^{\circ}$ C

Relatively humidity: ≤80%

- 10.2.3 The LCD modules should be stored in the room without acid, alkali and harmful gas.
- 10.3 The LCD modules should be no falling and violent shocking during transportation, and also should avoid excessive press, water, damp and sunshine.
