1 Description

The TM202JBCWVBYA, Character LCM unit consists of 20-character×2-line dot-matrix(5×8 dot) LCD panel, LCD driver, controller LSI on a single PCB. Incorporating mask ROM-based character generator and display data RAM in the controller LSI, the unit can efficiently display the desired character under microprocessor control.

- Wide viewing direction.
- Wide Operating temperature.
- Requirements on environmental protection: RoHS.

2 Features

</tr>
</tbody>
</table>

Notes:
- Color tone can slightly change with temperature and driving voltage.
- Color tone will be changed by backlight.
### 3 Absolute maximum ratings

(Without LED backlighting, $Ta=25^\circ C$)

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Symbol</th>
<th>Min</th>
<th>Max</th>
<th>Unit</th>
<th>Remark</th>
</tr>
</thead>
<tbody>
<tr>
<td>Logic circuit supply voltage</td>
<td>VCC</td>

<td>°C</td>
<td></td>
</tr>
<tr>
<td>Storage temperature range</td>
<td>Tst</td>
<td>-30</td>
<td>+80</td>
<td>°C</td>
<td>No Condensation</td>
</tr>
</tbody>
</table>

Note:
- LCD operating voltage $V_{LCD}=V_{CC} - V_{ee}$
- If the module is above these absolute maximum ratings, it may become permanently damaged.
- $V_{CC} > V_{SS}$ must be maintained.

### 4 Mechanical Characteristics

## 7 Instruction Code & Timing characteristics

### 7.1 COMMAND

The module TM202CBCWVBYA include the controller-ST7066U. The table below lists the types of commands, including the code of each command. More details refer to ST7066U data sheet please.

<table>
<thead>
<tr>
<th>Command</th>
<th>Command Code</th>
<th>Command Description</th>
<th>Execution time (tsoc=270kHz)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Clear Display</td>
<td>0000000001</td>
<td>Write &quot;20H&quot; to DDRAM. and set DDRAM address to &quot;00H&quot; from AC.</td>
<td>1.52ms</td>
</tr>
<tr>
<td>Return Home</td>
<td>000000001X</td>
<td>Set DDRAM address to '00H' from AC and return cursor to its original position if shifted. The contents of DDRAM are not changed.</td>
<td>1.52ms</td>
</tr>
<tr>
<td>Entry Mode Set</td>
<td>000000001I/DS</td>
<td>Sets cursor move direction and specifies display shift. These operations are performed during data write and read.</td>
<td>37us</td>
</tr>
<tr>
<td>Display ON/OFF Control</td>
<td>00000001DCB</td>
<td>D=1: entire display on</td>
<td>37us</td>
</tr>
<tr>
<td>Cursor or Display Shift</td>
<td>000001S/CRLX</td>
<td>Set cursor moving and display shift control bit, and the direction, without changing DDRAM data.</td>
<td>37us</td>
</tr>
<tr>
<td>Function Set</td>
<td>000001DLNFX</td>
<td>Set interface data length (DL: 4-bit/8-bit), numbers of display line (N: 1-line/2-line), display font type(F: 5 X 8 dots/ 5 X 11 dots)</td>
<td>37us</td>
</tr>
<tr>
<td>Set CGRAM Address</td>
<td>0001AC5AC4AC3AC2AC1AC0</td>
<td>Set CGRAM address in address counter.</td>
<td>37us</td>
</tr>
<tr>
<td>Set DDRAM Address</td>
<td>01AC6AC5AC4AC3AC2AC1AC0</td>
<td>Set DDRAM address in address counter.</td>
<td>37us</td>
</tr>
<tr>
<td>Read Busy Flag and Address</td>
<td>1BFAC6AC5AC4AC3AC2AC1AC0</td>
<td>Whether during internal operation or not can be known by reading BF. The contents of address counter can also be read.</td>
<td>0us</td>
</tr>
<tr>
<td>Write Data to RAM</td>
<td>10D7D6D5D4D3D2D1D0</td>
<td>Write data into internal RAM (DDRAM/CGRAM).</td>
<td>37us</td>
</tr>
<tr>
<td>Read Data from RAM</td>
<td>11D7D6D5D4D3D2D1D0</td>
<td>Read data from internal RAM (DDRAM/CGRAM).</td>
<td>37us</td>
</tr>
</tbody>
</table>

Be sure the ST7066U is not in the busy state (BF=0) before sending an instruction from the MPU to the module.
ST7066U. If an instruction is sent without checking the busy flag, the time between the first instruction and next instruction will take much longer than the instruction time itself. Refer to instruction Table for the list of each instruction execution time.

7.2 Interface Timing characteristics

Note: Please refer to IC: ST7066U data sheet for more details.

</tbody>
</table>

(Note10-1) The maximum and minimum ratings don't mean the LCD works well in the whole range of $V_o$. $V_o$ must be adjusted to optimize the viewing angle and contrast. Refer to definition of drive voltage, refer to 10.2.

(Note10-2) The frequency shouldn't be too low to avoid flicker. Refer to definition of drive voltage, refer to 10.2.

(Note10-3) Refer to 10.2/10.3/10.4/10.5.

(Note10-4) The selected state is dark and non-selected state is white( or bright) with positive type, reversely the selected state is white (or bright) and non-selected state is dark with negative type. Refer to 10.6 definition of response time.

(Note10-5) Generally the viewing direction is 6:00 or 12:00, sometimes 3:00 or 9:00. The range of left to right and up to down based on Cr=2 show the viewing angle. Viewing angle range isn't the range of defects inspection. Refer to 10.4.
10.2 Definition of drive voltage

(1) Definition of drive voltage and waveform

\[ V \]
\[ \frac{V_0}{(n-1)/nV_0} \]
\[ \frac{2/V_0}{-1/V_0} \]
\[ -\frac{V_0}{nV_0} \]
\[ -(n-1)/nV_0 \]
\[ -V_0 \]

Selected waveform
Non-selected waveform

Multiplex waveform
Static waveform

Fig.1 Definition of drive voltage and waveform

Operating voltage: \( V_0 \)
Frame frequency: \( f = 1/T \)
Duty: \( 1/N \)
Bias: \( 1/a \)

(2) Operating voltage: \( V_0 \)

TIANMA can evaluate whether the LCD can be redesigned to obtain customer preferable performance if customer’s LCD drive voltage isn’t adjustable.

10.3 Optical characteristics measurement equipment and method

The setup and test method are showed in fig.2. Test methods are different according to different illumination mode.

Transmissive mode: light resource is placed at the back of LCD.
Reflective mode and transfective mode: light resource is placed at the front side of LCD.

Fig.2 Optical characteristics measurement equipment
The chamber temperature, light resource and driving signal should be stable before testing. If test the characteristics under high or low temperature, the test system should be stable for more than 10 minutes before testing.

10.4 Definition of viewing direction

Refer to the graph below marked by \( \theta \) and \( \Phi \)

![Diagram showing viewing direction](image)

**Fig.3 Definition of viewing direction**

10.5 Definition of contrast ratio

Contrast ratio can be calculated by the formula (10-1) below for positive type. If the LCD is negative type, \( Cr(\theta, \Phi) \) is equal to luminance (\( \theta, \Phi \), non-selected state) divided by luminance (\( \theta, \Phi \), selected state). Note 3-4 shows the relationship between selected state, non-selected state and bright state, dark state.

\[
Cr(\theta,\Phi) = \frac{L_2}{L_1} = \frac{\text{Luminance}(\theta,\Phi) \text{ (Bright state)}}{\text{Luminance}(\theta,\Phi) \text{ (Dark state)}}
\]

(10-1)

![EOC graph](image)

**Fig.4 Electro-optical characteristic (EOC) graph (positive type)**

10.6 Definition of response time

Turn on time (rise time): \( t_{\text{on}} = t_d + t_r \) (from non-selected state to selected state)

Turn off time (fall time): \( t_{\text{off}} = t_d + t_r \) (from selected state to non-selected state)
10.7 Definition of viewing angle

\[ \theta_1 \] —— range of viewing angle from up to down
\[ \theta_2 \] —— range of viewing angle from left to right.
## 11 Reliability

<td>2</td>
<td>After testing, cosmetic defects should not happen, no low temperature bubbles, seal loose and fall, frame rainbow, ACF bubble growing are unallowable in the appearance test.</td>
</tr>
<tr>
<td>3</td>
<td>Total current consumption should not be over 10% of initial value.</td>
</tr>
<tr>
<td>4</td>
<td>After tests being executed, Contrast must be larger than 70% of its initial value prior to the tests.</td>
</tr>
<tr>
<td>5</td>
<td>No glass crack, chipped glass, end seal loose frame crack and so on.</td>
</tr>
<tr>
<td>6</td>
<td>No structure loose and fall.</td>
</tr>
</tbody>
</table>
12 Quality level

12.1 Classification of defects

Major defects (MA): A major defect refers to a defect that may substantially degrade usability for product applications. All functional defects: no display, display abnormally, open or missing segment, short circuit, missing component, outline dimension beyond the drawing, and progressive defects and those affecting reliability.

Minor defects (MI): A minor defect refers to a defect which is not considered to be able substantially degrade the product application or a defect that deviates from existing standards almost unrelated to the effective use of the product or its operation. Black spot, White spot, Bright spot, Pinhole, Black line, White line, Contrast variation, Bubble (Bubble in the cell is not included), Glass defect, and Polarizer defect beyond the standard as follows.

12.2 Definition of inspection range

For dot defect of TFT LCD which is not smaller than 3 inches, dividing three areas to make a judgment (according to figure 1).

A zone: center of viewing area
B zone: periphery of viewing area
C zone: Outside viewing area

For other defects, dividing two areas to make a judgment (according figure 2).

A zone: Inside Viewing area
B zone: Outside Viewing area

X1(A.A~V.A): 2mm X2(A.A~V.A): 2mm
Y1(A.A~V.A): 2mm Y2(A.A~V.A): 2mm

12.3 Inspection items and general notes

Company confidential. Duplication or disclosure prohibited. All rights reserved.
### Component soldering:

- No cold soldering, short, open circuit, burr, tin ball
- The flat encapsulation component position deviation must be less than 1/3 width of the pin (Pic.1);
- The sheet component deviation:
  - Pin deviates from the pad and contact with the near components is not permitted (Pic.2)

### Lead defect:

- The lead lack must be less than 1/3 of its width;
- The lead burr must be less than 1/3 of the seam;
- Impurities connect with the near leads is not permitted

---

13 Precautions for Use of LCD Modules

13.1 Handling Precautions

13.1.1 The display panel is made of glass. Do not subject it to a mechanical shock by dropping it from a high place, etc.

13.1.2 Liquid in LCD is hazardous substance, if the display panel is damaged and the liquid crystal substance inside it leaks out, be sure not to get any in your mouth, if the substance comes into contact with your skin or clothes, thoroughly and promptly wash it off using soap and water.

13.1.3 Do not apply excessive force to the display surface or the adjoining areas since this may cause the color tone to vary.

13.1.4 Don't touch, push or rub the exposed polarizer covering the display surface of the LCD module with anything harder than an HB pencil lead, the polarizer is soft and easily scratched, handle it carefully.

13.1.5 Don't put or attach anything on the display area to avoid leaving any marks on.

13.1.6 If the display surface is contaminated or becomes dusty, breathe on the surface and gently wipe it with a soft dry cloth. Do not scrub hard to avoid damage to the surface. If still not completely clear, moisten cloth with one of the following solvents:

- Isopropyl alcohol
- Ethyl alcohol

Solvents other than those mentioned above may damage the polarizer. Especially, do not use the following:

- Water
- Ketone
- Aromatic solvents

13.1.7 Do not attempt to disassemble the LCD Module.

13.1.8 If the logic circuit power is off, do not apply the input signals.

13.1.9 Avoid using the same display pattern long time (continuous ON segment). Software must be prepared so that the pattern will be changed.

13.1.10 To prevent destruction of the elements by static electricity, be careful to maintain an optimum work environment.

a. Be sure to ground the body and electric appliances when handling the LCD Modules. It is preferable to use conductive mat on table and wear cotton clothes or conductive processed fibre. Synthetic fibre is not recommended.

b. Tools required for assembly, such as soldering irons, must be properly ground.

c. To reduce the amount of static electricity generated, do not conduct assembly and other work under dry conditions.

d. The LCD Module is coated with a film to protect the display surface. Be careful and slow when peeling off this protective film since static electricity may be generated. It is recommended to use ionic fan or machine when operating. It is recommended to remove the protection foil slowly (> 3 sec.).

e. It is preferable to wear gloves etc, to avoid damaging the LCD. Please do not touch electrodes with bare hands or avoid any other contamination.
13.2 Storage precautions

13.2.1 When storing the LCD modules, avoid exposure to direct sunlight or to the light of fluorescent lamps.

13.2.2 The LCD modules should be stored under the storage temperature range. If the LCD modules will be stored for a long time, the recommend condition is:

- Temperature: 5°C ~ 40°C
- Relatively humidity: ≤80%

13.2.3 The LCD modules should be stored in a clean environment or room, free from acid, alkali and harmful gas.

13.2.4 Store the module in anti-static electricity container and without any physical load.

13.3 Transportation precautions

- The LCD modules should be no falling and violent shocking during transportation, and also should avoid excessive press, water, damp and sunshine.

13.4 Soldering

13.4.1 Use the high quality solders, only solder the I/O terminals.

13.4.2 No higher than 280°C and time less than 3-4 second during soldering.

13.4.3 Rewiring: no more than 3 times.

13.4.4 when you remove connector or cable soldered to I/O terminals, please confirm that solder is fully melted. If you remove by force, electrodes at I/O terminals may be damaged (or stripped off). It is recommended to use solder suction machine.
