1. FEATURES

The 3.0” LCD module is the active matrix color TFT LCD module. LTPS (Low Temperature Poly Silicon) TFT technology is applied with vertical and horizontal drivers built on the panel.

Both of horizontal and vertical scan are reversible and controlled by the serial interface commands.

The product is designed for the requirement of the green product, and the specification complies with Toppoly’s “Green Product Chemical Substance Specification Standard Hand Book”.

7. Power Sequence

7.1 Power on to normal mode sequence

Power on (low power mode, global reset) to normal mode sequence

Step1: Wait VCC go stable and then send a low pulse(more then 160us) to GRSTB pad

A normal command is following GRSTB low pulse

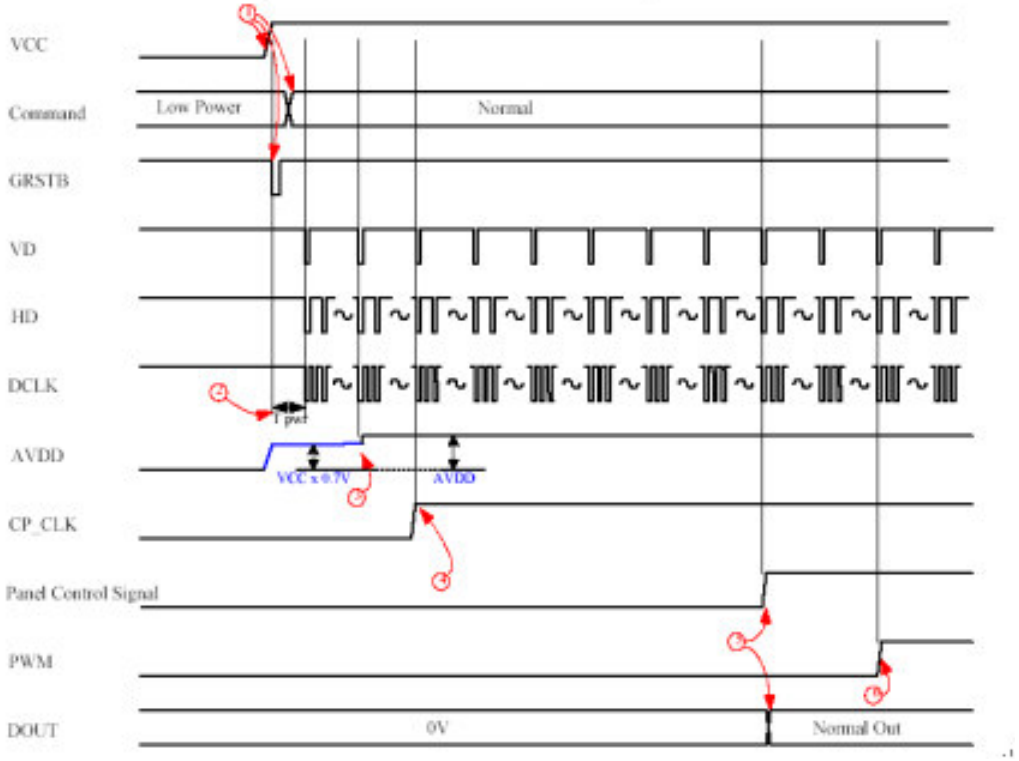
Step2: Before turn on VCC, the VD/HD/DCLK input signal must keep still until Tpwr(2ms).

Step3: AVDD will start when second VD coming.

Step4: CP_CLK will start when third VD coming.

Step5: Panel Control Signal and Normal DOUT will start when ninth VD coming.

Start6: PWM control signal will start when eleventh VD coming.



7.2 Normal mode to power off sequence

10. HANDLING CAUTIONS

10.1 ESD (Electrical Static Discharge) Strategy

ESD will cause serious damage of the panel, ESD strategy is very important in handling. Following items are the recommend ESD strategy

(1) In handling LCD panel, please wear non-charged material gloves. And the conduction ring connect wrist to the earth and the conducting shoes to the earth is necessary.
(2) The machine and working table for the panel should have ESD prohibition strategy.
(3) In handling the panel, ionize flowing decrease the charge in the environment is necessary.
(4) In the process of assembly the module, shield case should connect to the ground.

10.2 Environment

(1) Working environment of the panel should in the clean room.
(2) The front polarizer is easy damaged, handle it carefully and do not scratch it by sharp material.
(3) Panel has polarizer protective film in the surface please remove the protection film of polarizer slowly with ionized air to prevent the electrostatic discharge.

10.3 Others

(1) Turn off the power supply before connecting and disconnecting signal input cable.
(2) The connection area of FPC and panel is very weak, do not handle panel only by FPC or bend FPC.
(3) Water drop on the surface or condensation as panel power on will corrode panel electrode.
(4) As the packing bag open, watch out the environment of the panel storage. High temperature and high humidity environment is prohibited.
(5) When the TFT LCD module is broken, please watch out whether liquid crystal leaks out or not. If your hand touches liquid crystal, wash your hand cleanly by water and soap as soon as possible.
